Owing to the breadth of London from east to west, and to the consequent length of the sewer-lines, as well as to the low level of ground at the west,—and perhaps as to the north side, to change in the design,—there will have to be in the case of each side of the Thames, two lifts. On the south side, although much of the area within the jurisdiction of the Metropolitan Board is of a high level, an underground course has been adopted for the Outfall-Sewer; so that the whole of the sewage has to be pumped at the point of outfall. The Low-level sewage is also pumped at Deptford to the level there, of the Outfall-Sewer, which continues the lines of the High-level Sewer and the Effra Branch.

On the north side, the Low-level sewerage, so to be called as belonging to the one system, connected with the lifts, or from the level involving them necessarily, has an area which commences from a point that lies even north of the Northern High-level Sewer. This point is at the North London Railway, just south of Homerton; and the area thence extends southwards (crossed at Old Ford by the parallel channels of the Middle-level Sewer and the Northern High-level), and takes in Bow and Poplar; still south of which lies the Isle of Dogs. Respecting the system for this latter district, we have no present information. In the western part of London, the Low-level system takes in Westminster, Chelsea, Fulham, Hammersmith, and Shepherd's Bush.

The whole of the ordinary sewage of the immense area comprised in these limits, and including the length of the Thames Embankment, will at last flow through a 10 feet 3 inch barrel-sewer to the spot near Abbey Mills, West Ham Abbey, mentioned by us as the site of the station where the sewage will be lifted finally to the higher level, and where a third parallel line is added to the other two to Barking Creek. The height of lift will be about 38 feet, or somewhat more than the measurement from invert to invert. The level of the invert of the sewer of the Low-level, as proposed, at this point, would not be low enough to get the requisite incline unbroken, all the way from Hammersmith: therefore there will be somewhere at least one other lift, as already mentioned. The position for it selected may be between the Chelsea Suspension Bridge, and the Victoria Station and Crystal Palace Railway Bridge. The lift there would be about 18 feet, that is from 19 feet below Ordnance datum to 1 foot below. This assumes that the course of the Low-level Sewer would be along Lupus-street; but the whole of the sewerage between Westminster Bridge and the western side of Cremorne Gardens is to be considered as unsettled. From the point last mentioned, to the limit of the Board's jurisdiction between Hammersmith and Chiswick, as well as short of Acton, the sewers are either completed or are very nearly so. For this western district, generally described as the Western Division, it was originally intended to have deodorizing works and an outfall into the Thames, just west of the Kensington Railway Bridge. But, that intention, as our readers have some time known, has been abandoned in favour of the connexion ultimately with the Low-level Sewer.

Lines of the metropolitan sewerage are marked upon a published map which has been "drawn and engraved for the Metropolitan Board of Works;" but there are many inaccuracies in it, and it can scarcely be taken as any guide. In particular, besides showing many portions of the Low-level sewerage as settled, which are not so, or which have been arranged otherwise than as shown, it shows the branch from Homerton, which replaces the Hackney Brook, in connexion with the Outfall Sewers, and not continued to the main Low-level Sewer, between Bow and Bromley, the real course of the branch, as will shortly be described.

The whole Northern Low-level sewerage with that of the Western Division, and with pumping-stations, promises before completion to have formed the subject of something near a dozen contracts. The most important of these are the contracts for the sewer and the Embankment between Westminster Bridge and a point to the west of Blackfriars Bridge, opposite the Temple. They include not merely the river-wall, the steamboat-piers, requisite works to the bridges, a sub-way, and the sewer which would form part of the Low-level line; but they include other sewers of interception, and elaborate contrivances, chiefly in connexion with old outlets, for the escape of storm-waters. The portion of the line immediately east of the Temple and in front of the Gas Works, and the length thence to Trinity-square and the north-western angle of the Tower, we must consider like the portion westward of Westminster Bridge, as not absolutely decided upon. The length between Trinity-square and Abbey Mills, with a portion of the branch taking the Hackney Brook sewage, was the subject of last week's tenders; and this we proceed to notice in detail, leaving the work of the Embankment to a future opportunity.

The length of the main line, and so much of the branch as belongs to the present contract, amount to 4 miles 4,855 feet, the main line length being 3 miles 4,485 feet and the branch length 1 mile 370 feet. The main line has throughout the same inclination as the lines passing to Barking in the embankment, namely 1 in 2,640, or 2 feet per mile. At the lowest point at Abbey Mills, the invert is to be about 17 feet 6 inches (17·590) below Ordnance datum; and this will be about 24 feet 6 inches below the present surface of the ground. The level of the inverts of the parallel lines in the embankment being about 19 feet 6 inches (19·439) above the datum, the height from the invert of the lower level to that of the upper is seen to be about 37 feet (37·029). The level of 17 feet 6 inches below the datum, should be considered as very nearly 11 feet below low-water mark. The present surface of the ground at the site of the pumping-station is 6 feet below Trinity high-water mark. Fortunately, a considerable portion of the length of the main line will pass through the London blue clay, and can be tunnelled; but this condition of the strata has not been found to exist between the site of the pumping-station and the branch of the Lea called Three Mills Wall River, a length of about 1,400 feet. At the first boring where the sewer is to commence, or actually about 450 feet at present from the sewers-embankment, the water-line was reached at 2 feet from the surface after passing through 6 inches of black soil and 18 inches of yellow clay. Below these were 2 feet of clay and gravel, 12 feet of sand and gravel, 2 feet of grey clay, and 14 feet of soft sand, in which last the level of the invert of the sewer would fall. Starting little below it, the section shows 11 feet of loamy sand, and lastly stiff clay. Tracing the course of the sewer upwards, the second boring, near to the stream just named, showed the water-line to be in peat of 4 feet in thickness, underlaying loamy clay of 1 foot 6 inches thickness, and black soil of 1 foot. Below the peat, the crown of the sewer would come in 19 feet of sharp sand and ballast; just below which sand, the invert would fall within the London clay, which is 14 feet 6 inches thick at

this point, and overlays 6 inches of soft white sand, 1 foot 6 inches pebbles and sand, 3 feet black sand, 6 inches shells and clay, 4 feet of coloured clay, and a stratum yet lower, of sand and clay. The London clay is fairly entered by the line of the sewer, at the spot where the third boring was taken, which is on the western bank of the main channel of the Lea. Here the surface of the ground is 15 feet higher than the level at the starting-point of the sewer. The water-line stands at 2 feet below the surface, in made ground, which has here a thickness of 9 feet, overlaying 2 feet of sand and gravel and 4 feet of yellow clay. Below the yellow clay begins the London clay, that is to say precisely at the level of the surface at the starting-point. At the next point, near the Stepney Union, the top of the London clay, the water-line, and the level of the surface of the ground, are still higher. The strata above the clay comprise 3 feet 7 inches of made ground, 7 feet 6 inches of pit gravel (below the centre of which is the water-line) 2 feet of sharp sand, 8 feet of coarse gravel, and 2 feet of yellow clay. The greatest elevation of the surface recorded on the sheet of sections of the strata, was found beyond the western termination of the portion of the main line now under notice, namely in Eastcheap, where the surface is 51 feet above Ordnance datum, or 38 feet 6 inches above Trinity high-water mark, and where the made ground is 15 feet in thickness. We may mention that in Cannon-street West, near to the end of Walbrook, where the surface has fallen to just over 32 feet above the datum, the made ground was found to be 19 feet 2 inches in thickness. Immediately below it came 11 feet of yellow clay; below which was the London clay. At this spot, the crown of the arch of the sewer intended but not yet tendered for, will fall just within the London clay. Opposite Bow-lane, the surface of the ground has risen about 14 feet 6 inches, and that of the blue clay has risen considerably. We have several times drawn attention to the importance and interest of such information, which Mr. Bazalgette's trials have furnished in abundance.

The course of the sewer after the meadow-land which is next the starting-point, is under Three Mills Wall river, and a confluent stream called the Three Mills Back River, and under the Lea to Three Mills-lane, under houses, and crossing under St. Leonard's-street, under the ground at the south-east angle of the Stepney Union, under the Tilbury and Southend Railway, and the North London Railway branch, and under and along Devon's-lane, St. Paul's-road, and part of Turner-road, parallel with the North London main line, and thence parallel with the canal, and crossing under it in the same line with Salmon's-lane. From Salmon's-lane the sewer skirts the south-eastern side of the railway to the Commercial-road, under which it crosses under the line. This is close to the junction of the North London Railway, with the Blackwall line. Again, close to this junction, the sewer-line turns southward to cross under the Blackwall Railway, after which it passes by a line of streets which are generally parallel with the railway, and north of the London Docks, through Ratcliff, Shadwell, and along Cable-street and Royal Mint-street, to the point near the Tower already mentioned as the termination. Here the invert has risen somewhat more than 17 feet 6 inches (17·69), that is in the length of 3 miles 4,485 feet, but is still rather more than 3 feet below low-water level. The branch, of which a portion is in the present contract, will join the main line in St. Leonard's-street; and eventually, a branch from Poplar and the Isle of Dogs may join somewhat westward of the same spot.

The sewer is to be all of the barrel form. The dimensions, again tracing the course upwards, are in the clear diameter, for the first 2,795 feet, the already mentioned 10 feet 3 inches; for 1,000 feet 10 feet; for 4,700 feet in Devon's-lane and St. Paul's-road, to Cotton-street, Bow Common, 9 feet 9 inches; for 5,030 feet, ending in Brook-street, at Devonport-street, Commercial-road, 9 feet 6 inches; for 2,910 feet in Back-road, and ending at Cannon-street-road, 9 feet 3 inches; for 1,660 feet in Cable-street, and ending at Leman-street, 9 feet; and, for 2,230 feet the remainder of the length, 8 feet 9 inches.

The portion of the largest diameter, which passes through the worst soil, will be constructed of four rings of brickwork in cement; and the outer ring, all round, will be covered with Seyssel asphalte, 1½ inch in thickness. The method of construction will continue to the point where the branch, Hackney Wick Branch Sewer, joins in, in St. Leonard's-street, Bromley. This length of the main sewer, the 2,795 feet, will also have a line of 12-inch stone-ware drain piping laid externally along and under the invert; and the whole, both sewer and pipe, will be encased in Portland cement concrete 9 inches thick at the sides, and flat-bedded, and finished at the top so as to have a general square form of the exterior as shown in section. Moreover, well-tempered clay-puddle is to be placed over and by the sides of the concrete, 2 feet in thickness. The precautions are intended to prevent the slightest leakage into the sewer, of water from the ground, or from the streams which will pass over or near the sewer. The remainder of the work of the main line will be simply of four rings of brickwork in cement. There are sewers existing in various portions of the line, and above the level of the work, as in St. Paul's-road, Back-road, Brook-street, New-road, Cable-street, and Royal Mint-street. These will, of course, require careful handling.

The Hackney-wick Branch, so far as belonging to the present contract, is the lower end of a line which formed part of the High-level contract. The northern portion of the line was completed with the High-level Sewer, by Mr. Moxon; and has been described by us. We may mention, however, that this northern portion of the branch is joined by a syphon to those storm-water outfall-sewers that run, below the main lines of the High-level and Middle-level sewers, to the Lea; so that at present the Hackney Brook sewage is still passing into the Lea. The design, however, was to carry that sewage crossing under the storm-water outfalls, and to form a connexion with the Low-level main line as stated. The length at present in question, following the course downwards, will pass from the Outfall Sewers, by Old Ford-road, and generally south-eastward, crossed by the Great Eastern Railway, and coming near to the western bank of the Lea, crossing High-street close to Bow Bridge, and turning round by the Bow Brewery, to pass along High-street, Bromley, to the junction with the main line in St. Leonard's-street. This sewer, 1 mile 370 feet in length, is to be constructed as a 4-feet barrel sewer of three rings in cement. At the lowest point it is about 16 feet 6 inches below Ordnance datum; and thence for 5,650 feet, the inclination will be 1 in 273, or 19 feet 4 inches per mile. Thus in the length of High-street, Bromley, there will be a fall of 10 feet 6 inches for the sewer. The remainder of the length will have an inclination of 1 in 533, or 9 feet 9½ inches per mile: the invert of the portion of the sewer at present constructed being, at Old Ford, 9 inches above Ordnance datum. The line, judging from the borings, will pass entirely through the London clay.

There are no novel provisions for ventilation of these sewers, more than in any of the lines which we have described. Connected with the Low-level Sewers there will be circular shafts; which, in the case of the main line, start from the sewer with a diameter of 5 feet, and rise to 3 feet, where the shaft is covered with the ordinary grating laid in the street-paving. The arrangement of the side entrance includes a shaft 6 feet in diameter, domed over and covered by a ventilating-grating, and containing a circular staircase.

Relative to our observations when we published the list of tenders, that the difference between the highest and lowest was more than 100,000*l*., it is but right to direct attention to the fact that there must be, in work of this character, a large amount of materials and labour for which the contractor has little guidance beyond general clauses in the specification, and the information given by borings. Here, in the tunnelled portions of the work, all cavities, from whatever cause arising, are to be filled up solid to the maiden ground, with brickwork in cement; and all timbering, &c., requiring to be left in, is to be at the contractor's expense. In open cuttings, indeed, timber left in, is to be paid for as extra. But the contractor is held responsible for any damage which may occur, as where the sewer passes under the Lea, and under the Regent's Canal; he is to make terms with owners, lessees, and occupiers, and to pay all compensations, including those for loss of trade or rent. He is of course to provide all machinery and contrivances for pumping; for, "no part of the sewer" is to "be suffered to become water-logged." The experience of Mr. Rawlinson in the district of West Ham, to which we referred in one of our articles, would help to show what may be expected in some portions of the ground traversed.

The works are to be finished in eighteen months from the time at which the order to commence is received; or the contractor is to pay 50*l*. per day as liquidated damages.

Some differences from the manner of executing the work of the Outfall Reservoir, are to be remarked in clauses of the specification. The concrete is to be formed, in place of the one measure of blue lias lime and six of ballast, of one of Portland cement to seven of ballast, the latter to contain one of sand. There is yet room for inquiry into the best method of mixing concrete. Some say there is error in the usual mixing with hot lime, that the lime and sand should be mixed before ballast is added, and that there is no reason why the material should not be used *en pisé* above ground, and afford walls thicker by one-third, than those of brick-work, whilst at one-third less expense. Certainly, in France, as by Coignet, there has been much done that merits attention. In the clause of the specification relating to cement, the material is required to be mixed with sand, one part of each, excepting where the cement would be liable to be acted upon by the water before it would have had time for resistance; in which case, neat cement is to be used.

The lowest tender by Mr. Webster, which would appear to have been accepted, amounted to 229,000*l*. Mr. Edmund Cooper, who has conducted the works of the Outfall, as well as those of the High-level Sewer, and who has also the Eastern portion of the Thames Embankment, will be the resident engineer

Some further particulars of the sewerage, now nearly completed, at the opposite extremity of London, may assist comprehension of the collective features of the Low-level.

The completed works of the Western Division include the Acton Branch, comprising 7,350 feet in length of brick and iron sewers and other works in connexion with them, and extending from the limit of the jurisdiction near Acton Vale, along the Uxbridge-road through Shepherd's Bush and across the West London Railway to Royal-crescent; at which point the branch enters the Counter's Creek Sewer, the old line which extends south-easterly, nearly parallel with the railway, passing east of the West of London Cemetery, and west of Cremorne Gardens, to enter the Thames at the Creek which forms a portion of the Kensington Canal. The Acton Branch cost 9,820*l*., including 970*l*. for extra works. The works of the Western Division proper, which are in progress, comprise the Main Line and the Fulham Branch. The total length included in the contract in the autumn of 1862, was four miles 2,175 feet; and the amount of the contract was 56,710*l*. The line originally intended to go into the Thames was not to continue quite to the river as part of the contract just referred to; and now, even the limit which was indicated has been stopped short of, near the Gas Works; whence a substituted line, or addition, is being carved round, to the north-west. The extension is to cross the Creek to a point whereat there will be a temporary pumping-station and a connexion with the Counter's Creek Sewer. The extension and connexion may ultimately be continued as the Low-level Sewer Main Line, or a branch of it, along Cheyne-walk; but this latter portion of the sewerage, as we have said, cannot be considered as decided upon.

The main line of the Western Sewers, passes north-westerly through Walham Green to the road connecting Fulham and Hammersmith; along this latter road it passes to the eastern end of Tranquilla-place, Hammersmith; it turns west to pass along Tranquilla-place, again to turn and pass north-westerly along the Queen's-road, and cross the road leading to Hammersmith Bridge, whence it continues along Cut Throat-lane, and crosses the creek to the Upper Mall, where it runs westerly to pass Hammersmith-terrace, and end with the limits of the jurisdiction in Chiswick Mall. The Fulham Branch starts from the main line, between Sands End-lane and Bagley's-lane, and passes south-westward, along the King's-road, through Parson's Green, to Church-street, Fulham, along which it runs to end at the bridge. The total length of these two sewers was originally 4 miles 1,390 feet as stated. The main line was 3 miles 1,315 feet, which must be about the present length. The length of the Fulham Branch is 1 mile 720 feet.

The lower end of the main line is considerably below low-water level. The invert is about 13 feet 6 inches below Ordnance datum, which last is 12 feet 6 inches below Trinity high-water mark. On the 15th of May, 1862, the condition

of tide was such that the level of the invert was about 12 feet 6 inches below the low-water level, and nearly 28 feet below the high-water level. The tide on the date given, rose to nearly 2 feet above Trinity mark, and did not fall much lower than 1 foot below Ordnance datum, instead of the nearly 7 feet which it fell to, at Barking, on another date. Comparison of such facts, will serve to show the difficulties of the sewerage of London, sought to be met by pumping. At the upper end of the main line of the Western Sewers, however, the level of the invert has risen to about 6 inches below Ordnance datum; and the similar end of the Fulham Branch rises above that. The main line has an inclination uniformly of 1 in 1,320, or 4 feet per mile; and it varies in dimensions from the 4-feet barrel form to the 4 feet by 2 feet 8 inches egg-shape. The Fulham branch has an inclination of 1 in 509, generally, and varies from 4 feet 6 inches by 3 feet, egg-shape, to 3 feet 9 inches by 2 feet 6 inches. The brickwork was 9 inches in thickness, and was set in Portland cement; and it was throughout the lines encased in concrete. The sewers were nearly everywhere above the blue clay, and had to be formed in trenches; whilst from strata above the sewer, water flowed copiously. At one point, now, an engine of 40-horse power is at work.

These works, originally contracted for by Messrs. Moxon & Co., are superintended by Mr. Thomas Lovick, as the resident engineer, who has also the superintendence of the western portion of the Thames Embankment, and of the northern Middle-level sewerage, which last is approaching completion.

These notes may form a fitting introduction to particulars of the work of the Embankment, which is already making itself very conspicuous on the river.

GLASS PAINTING, ANCIENT AND MODERN.*

ONE great cause of the beauty in the works of the early artists is the equality of pains they seem to have taken with all parts of their design. It accounts for the harmony which prevails between their glass and the architecture to which it is made subordinate. In the earlier styles the artistic composition of picture subjects was made effective and the groups of figures relieved from each other by contrasts of colour, rather than, as in more recent work, by opposing lines. Their shadows consisted of little else than lines, so that the glass was honoured throughout, and the right principle of a window was maintained as a thing of light. But as time progressed and the arts of mural painting and illumination became more realistic, glass-painting followed in the same strain.

There was one mode of composition often pursued throughout a window which has a most chaste and architectural effect. I mean the use of colour in the figures alone, or in the backgrounds alone; the other, as it may be, being all of white glass, diapered, or relieved by strong lines and golden-yellow stains. The grand simplicity of this effect can hardly be surpassed. There is another admirable effect produced in white glass by keeping both figures and background white. The relief of colour is given in bands and blots of it in parts of the window not occupied by those compositions. The effect I mean is produced by keeping the figures in pieces of glass of a comparatively large size, marking their outlines and principal folds of drapery and so on by very strong leading, the background being equally of white glass, but cut up into little pieces of geometrical diaper. The relief is perfect. It would be admirable for domestic use where a single window, or perhaps at most two, would be treated in this way; but there is no relief in it by colour for the cold architectural masses of church walls. Where such are all polychromed this is precisely the style of glass for the purpose. There is a modern plan, lately introduced, with something of the same object, but it utterly fails: it attempts to be pretty, and loses all the vigour which makes work in glass worth a straw. I mean the plan of taking sheets of glass, and drawing in outline figure subjects, and putting in various backgrounds, all drawn exactly in the same way and on the same piece of glass. The drawing is sometimes very creditable, but the result weak and poor in the extreme. If the makers of such work would only condescend to use glass as glass, and not like great sheets of paper, and would bear to be told that leading is not a vulgar expedient all very well for the poor benighted Goths who could not make such fine great sheets of glass as we can, they would then succeed where they now fail. It appears to me that it is the leading which gives consistency to a glass painting and vigour to its effect.

I was speaking of the improvements in the arts of painting during the fifteenth century. They were the first poison-drops which ultimately ruined the art applied to glass. Up to the end of the fourteenth century little harm was done. Shadows were used in the draperies, but they were used, as they ought to be, for glass. The folds were marked as in the previous style by strong and fine lines, the shadows in the fewest possible places so darkened as to save the rest from weakness. The points in the figure composition and the relief of the parts were maintained in the genuine spirit of glass-painting, by the contrast of colours and the shapes of the pieces, and pre-eminently by the reckless boldness of the leading.

Too much praise cannot be bestowed on the care that was lavished on the ornamental as distinguished from the pictorial parts. It is a great mistake to suppose that a high and refined sense of beauty can only be shown in figure-painting. Ornamentation is to art what the varieties in form and tint of leaves and flowers are to nature, and often expressive of its greatest beauty. It is a branch of art never despised by the really great artist. The principle of an arabesque, if only used in the right place, is admirable. The Early Gothic and Norman arabesques were magnificent. There is just in them that legitimate place for wild fancy which is wanted somewhere,—a sort of safety-valve for fun, which must break out somewhere, and might otherwise become dangerous.

About the middle of the fifteenth century the treatment of pictures in glass became more and more relaxed. The artists had hitherto been guided by the safe principle of deference to the architecture of which their work formed a part. After that time the architect's design seemed to be beneath the notice of the painter's condescension. He spread his picture over the whole window-space, regardless of all obstacles.

A little later than this a magnificent style of glass-painting was developed in Italy. Glass was treated pictorially indeed; but, like most genuine artists as they were, the Italian designers of those pictures felt intuitively that the compositions and resources of other styles were unsuitable for glass. So they went in for light and colour like men; and designed, for breadth of contrast and vigour of effect, figures, architecture, fruit, flowers, animals; and then leaded them all together, regardless of atmospheric effects and perspective, and with an equality of colour throughout and relief in the detail just enough to save all the objects from confusion. The effect was the most powerful that glass could produce. It was flat, architectural, and grand in the extreme. The success of those windows consisted in this, that their designers were, first of all, consummate artists themselves, and then that they had the genius and wit to seize the true and complete idea of the materials they had to work with. Theirs was the last blaze of that fine art for many a long year. Their successors adopted a new system by painting upon glass with enamel colours. The result was the rapid decline of the art. They would paint. The art of glass, therefore, was no more. Such was the fate of glass-painting south of the Alps. In the north, much the same result occurred. Religious and political troubles, far and wide, confirmed it. But here and there, and more particularly in Holland and Flanders, the old vigour of the art was revived. But the taste of the times was coarse, and the idea of art was too realistic to be attained in glass, without straining it beyond its proper functions. Some grand effects were, however, produced by combining the inlaid system of the best times with the enamel-painting of the worst. The inferior artists revelled, as usual, in violent effects. The public taste of their day was low, and was growing lower. There was no demand for good art, so there was no supply. And so the art dwindled away, till it fell, as I described at the beginning of this address, into the hands of the plumbers.

By this very sketchy review of the history of the art, from its earliest day to our own, and by our own personal observation of the works which remain of the various periods and styles, by the rarity of success and the frequency of failure, we must be impressed that there are somewhere, if we could but find them, some as certain principles for the foundation of all that is good in this as in any other of the fine arts; and that, for any hope of its successful revival, the first thing for us to do is to master those principles; and, further than that, to clear from our minds those obstacles which the very knowledge we possess of other arts may cast in the way of our comprehension and success in this.

I think that those principles are perfectly clear. The subject appears naturally to divide itself thus: 1, the treatment of ornamentation; 2, the treatment of pictorial composition. Of the first I will only say that it has met with too great indifference at the hand of modern glass-painters in general. Ornamentation is capable of taking a high position in the scale of art. The abstract beauty of form which is its very essence is comprehensible only to the most refined and intuitively artistic minds. It is a subject for glass-painters especially, and worthy of the talent and the labour they can expend upon it. I hope they will do so. It involves quite as much the improvement of the material of glass and its variety (which we are all desiring) as its treatment.

To go, then, without further delay, to the second part of the subject, it is evident that the greatest difficulty lies in the treatment of pictures in glass. You have seen, in the slight sketch of the art, how, as the other arts advanced, the glass-painter was tempted to push his also forward, not perhaps so much for any ambition to rival them, as that, his eyes having become habituated to a more artificial and academic system, he followed onward with the stream of his contemporaries. But he found at last, with many other reformers, that advance is not always synonymous with improvement. In his time perspective had become a science. Theories of composition, of the balance of lines, of the balance of colour, were taught as axioms of art. Pictures were no more suggestions or reminiscences, but actual representations, with all the natural effects of sun and shadow, night and day. And why was not all this to be effected on glass as well as on canvas or a wall? The glass-painter seems to have gone on asking himself this question; and now in our time people are asking it again. They are demanding pictures for their windows, family legends and local traditions for their halls, sacred subjects for their churches. How is the modern glass-painter to proceed? He certainly stands on the 'vantage-ground of experience. The successes and failures of past days are all before him. He has, with few exceptions, the whole array of materials for equal success: he has himself only to blame for equal failures. His difficulties are the difficulties of abundance rather than poverty. Style after style is open to his choice. Science is at his bidding. Galleries and museums are open to him everywhere. And the skill of the modern artisan sets him at ease about matters of technicality.

But it is just in all this that his trouble lies. He is impelled by all around him to the idea of advance. The notion of accepting the principles of a less educated age is to him a notion of retrogression. And there are other rocks than these also for him to wreck upon. There is the pre-occupation of people, in all the absorbing objects of this busy age, which unfits them for the quiet atmosphere of art, and greatly disqualifies their judgment. Then there is the unsettled state of architectural taste, which keeps all the arts associated with it in the same unhappy condition. Then there is that most fatal commercial element to contend with—to which, indeed, be all honour and respect paid within the broad limits of its proper action for individual and national enterprise and wealth—not when it invades the realm of the arts and presses one of the finest of them, as it does now glass-painting, into its service: no loose stone in a foundation, no poison in the food, no worm in the bud, could be an element of more certain ruin than it.

I know that here I touch on a very delicate subject. If I give offence I regret it, but there are occasions when plain opinion and plain truth must be stated, and this is one of them. I know that the artist must live by his art. I know, too, that it will be replied to my objection that the artist is under great obligation to the man of commercial energy for giving him the means of constant employment. So far so good—we are quite agreed so far. The evil is not here. The evil does not lie in the man of commerce supplying the artist with the means of constant

* By Mr. T. Gambier Parry. See p. 506, *ante*.

employment, but in the simple reversing of those words, that it is the artist who is pressed to supply the commercial man with the constant employment of his means. That is the evil, and a serious one. The very energy of the employer is the ruin of the employed. His talents are over-pressed—the fertility of his invention over-tasked. Orders pour in,—customers become impatient,—work must be completed, or, in its commercial sense, "turned out," in a specified time. The result is repetition, inferiority, and routine. But a still worse state of the case is this, and a common one, that the contract price keeps down the quality of the work—and quality is a matter of time, and time is money;—and thus a man's genius and high feeling are fettered and crushed because one breath more, one step further would not pay. The rich stream must be diluted down to the necessities of trade. Genius is become an article of commerce, to be sold by the pound, or to be measured at so much per foot. I assert that this is utter degradation of art. No art can live long in such an atmosphere; nor, certainly, could it rise above the most utter mediocrity. Thus far, indeed, it might rise, and for such a purpose the lower powers of art are not improperly applied. There are very many things, objects of universal use and trade, of which the value is very legitimately enhanced by a certain amount of artistic excellence. For such purpose let such a system prevail; for carpets, curtains, silks, and ribbons, tables, embroidery, earthenware, clocks, and ten thousand other things, in which dealers must deal, and which manufacturers must supply. The more they civilize and cheapen their wares the better. But there are occasions also here where a rather higher character of art is sometimes applied; as, for instance, in the painting of the finest porcelain. But I never heard of even that being degraded as our glass is. I never yet heard of a Sèvres vase, or a Dresden group, or Chelsea bowl, being sold by the measure of their surfaces, or by any other test of value but that of the excellence to which the artist, by all the powers he possessed, could press, to the very utmost of his perfection, the work of his hands. But the glass-painter stands on a higher level of art than he does. I know that the glass-painter must live by the work of his hands, and that they are but the fruit of his genius. The greatest men before him have done the same. The greatest architects have built for money, the greatest sculptors have modelled, the greatest painters have painted for money; but where was ever one such as they found who would yield for one moment to the bondage of the money for which they worked, or who would not, with poor old Palissy, have rather burnt the last leg of his last chair, and the last rail of his garden fence, than bear to fail in the full excellence of his work? If glass-painting in our day is to be submitted to such pressure as would have crushed the genius of a Raffaelle, it has small chance of vitality, and none of perfection.

But I must not be misunderstood. I desire, by no means, to pass a sweeping censure against the combination of the commercial man and the artist. Our whole social state is changed since the days of those peaceful contemplative poets of art who began their work with prayer, and mingled their colours with devotion, making religion as much a medium of art as art a medium of religion—men who worked the live-long day, refreshing their spirits and their eyes on the tranquil and lovely scenery of Umbria.

But do you reply,—"Yes, but those men often undertook great works on contract, and at a fixed price, and fixed time too"? Yes, they did; but who made the contract, who fixed the time? Not any commercial partner who had to make money out of the artist's brains. No; for no art can reach excellence,—the complement of a man's full powers can never be attained but in the freedom of undisturbed thought. If there is any vital element in art, it is that which is akin to poetry. It is a strange mixture in itself of delicacy and power, qualities which in the execution of its work maintain and modulate each other. Delicacy would otherwise degenerate to weakness, and power swell into vulgarity. Art cannot live as a slave to commerce. When Perugino grew avaricious, he prostituted his art. It was lucky for the arts, and for his reputation, that in his younger days he had said his prayers. In those days he had acquired a power of refinement and expression of the most exalted character, for which all after-ages have venerated his memory. He had been a poet—he had indeed been a poet; but when his studio was lowered to a manufactory the volume of his glory closed.

I must repeat most explicitly that I by no means object to the combination of the man of business and the artist in an establishment for glass-painting. On the contrary, I think it would be one of the greatest service. I only demand that the two men should be in their proper places. I demand that their workshops—yes, call it boldly by its proper name, for in the highest days of art it always was the "bottega"—should be rather on the more dignified model of a school or a studio than that of a place of trade. I know most happily that there are such existing. There are very many details of such a "bottega," in which a man of business habits would be a perfect second right hand to the artist. There are orders of a common kind as well as of a higher, which must be supplied from such an establishment. There are works of ornamental art, which, when once well designed, may be many and many a time repeated, such as diapers, quarries, borders, geometrical work, and so on, in the various styles of architectural composition; for a really good thing had better be oftimes repeated, than poor ones multiplied. I would even say that the repetition of a higher class of pictorial compositions is by no means to be decried, when the means at hand for purchase are limited. A good copy of a good work is more honourable than the perpetration of a bad original. The one thing I demand in such a partnership is, that the artist should be king of the establishment. There is plenty of work for both. Such a "firm" (I call it so because there must be some capital invested) should be like a body corporate, with its right hand and its left. I demand that the right hand should be the artist's — every finger of it his. It shall be for him to say that such a work shall be undertaken, and, with wisdom and honesty (not always practised now), that such another shall be declined. I beg you for a moment to look at the opposite picture, and to listen for a moment to such a by no means impossible nor improbable conversation as this. Head partner, managing man of the "concern" enters: "Well, John, how do you get on? You must push along a bit. We have got that order for the Last Judgment, for the east window of blank Church; and Hannibal crossing the Alps, for the Duke of Bareacres's staircase. You must manage to work off Honolulu Cathedral by next month, for the other big window is promised for Australia before Christmas, and the ship sails in about a couple of months."

I ask you to conceive the utter state of prostration with which the artist partner flings himself into his arm-chair, poor fellow! if head partner allows him one; and to realise to yourself the utter prostitution of art submitted to such terms. I believe the scene to be by no means exaggerated, but to be only, in other words, of most possible occurrence. If art is to be a plaything, only let it be honestly sold in toy-shops. Let us have no more hypocrisy about it, no pharisaical nonsense about any height in its aim, any beauty in its motive, any divine gift in its genius. But if it be a noble thing, if these qualities and objects be really its own, let it be emancipated to the utmost possible to us weak mortals, from worldly pressure. Let the artist be at his own command,—at liberty to say yes or no; to live in and by the harmonious assistance of his invaluable commercial friend, but to fix his own work, his own time, his own price; to follow his glorious work in quietude, in honour to his art, in honour to his patrons, and in honour to himself. Commerce and art thus wedded together would be like body and soul to each other. Only let the right hand keep the keys (*i. e.*, the power to ordain and to dispense), and the left hand keep the accounts.

It would be a rare case to meet with so perfect a little body corporate as this. There would be no fear for its issue; and, happily, we know of some founded nearly on this ideal. But, alas! for human weakness, it too often happens that the partner in poetry, though he knows he is overworked, cannot bring himself to say "no" to the glittering offer of a patron. Partner in business decidedly hopes he will not; and so the spirit too often succumbs to the infirmities of the flesh!

If there be one greater error than another that an artist can commit, it is in the transgression of the nature of his materials. The more evident, the more distinct, that nature is, the greater is his sin. Now, if there be any material at his disposal of which the qualities and resources are more clearly marked than any other, it certainly is glass. If in oil colour, they are those of depth and power; if of water colour, delicacy; if of fresco, sobriety; of glass, they are pre-eminently those of light.

I by no means infer from this, what I might be mistaken to mean, a garish, gaudy use of the raw material. But I certainly do mean that the degradation of so beautiful a material as glass to the condition of cardboard, as is done too often by the Germans, or into oiled calico as by the Italians, or into a very bad style of whity-brown paper, as is frequently done by the English and French, is simply an *abnegation of the art in glass*. As I said before, glass is a thing of light and colour, which calico, cardboard, and brown paper certainly are not.

The abuse, as we have seen, arose at the time (the fifteenth century) when glass was manufactured thinner and more clear. The painters now black it to hide its poverty. It is wanted for all varieties of effect; and, rightly used, it can be gorgeous without being gaudy, and solemn without being dull. The first step to its improvement for art purposes must be the work of the manufacturer. I do not pretend to be versed in the niceties of its manufacture; but it appears to me that the ruby, the green, and the white would be better made thick, the blues more grey, the white very various in hues, and a more refractive and a rich translucent rather than purely transparent glass, made for them all.

The next step, the artist's, is not so easy to describe. If the right kind of glass could be got there would be little need of veiling it at all, to enrich its poverty or to tone its garishness, beyond the broad lines of the drawing, the lightest possible indication of shadow, and so on. Such, indeed, I feel, should be the law of the glass-painter. But as in severer matters, the best of laws are sometimes more honoured in their breach than in their observance, so it is with glass. And here it is, I think, that might come in the right use of enamel colours. Their exclusive use has two great objections,—one the costliness of their production in the perfection of the little cabinet examples, from Nuremburg and Munich; the other, their weak effect when used on any considerable scale, and from the number of bakings required for the different colours, a process often attended with fracture of the glass. But the pot-metals, toned with discreet moderation, as they have done especially in some of the Dutch and Flemish examples, would have at once a mellow and a rich effect—a good deal preferable to the choice between brown paper and blacking.

But now, having progressed so far, comes the great question, How is he to treat his pictures? There can be no real difficulty in this, but in the practice of humility and self-denial. The first thing for the artist under such circumstances is to make up his mind that he is, in truth and in deed, a "glass-painter." If only he is quite sure of that, half his difficulties are over.

Now let us for a moment compare the characteristics of a picture on canvas, and a picture on glass; and the conclusion will be obvious. In the first place, then, the element of form is common to them both, and equally within their reach. Then chiaroscuro, the whole law of which runs in the simple sequence of "high light, half tint, shade, reflected light, and cast shade," is also equally within the reach of both, for glass can be blackened as black as night, and high lights filled out as bright as the sun. Then "colour;"—that, too, is common to them both. Where, then, is the difference? I answer, Mainly in this, that, although all things may be possible, all things are not expedient.

But now look at the opposite view of the case. Take two subjects only, those of "roundness," and "atmospheric perspective." The way in which our artist produces the effect of roundness is by modification of colour, and by loss of outline. These are amongst the most powerful means in the hand of a painter, to produce to the eyes of others the effects of nature, and among the most favourite resources of his art.

These two, his primary essentials, are simply and entirely impossible to the glass-painter, because his outlines must be marked by lines of lead, and his colours can only be tempered by the coarse expedients of mere light and shade, or, at best, by enamels, which must injure the brilliancy, and can only darken, without in truth modulating, his colours.

There can be no modulation of colour in glass. I must not be mistaken. Of course glass may be ground into semi-opaque white and painted on in many ways with water and oil colours modulated as you please; but that is not glass painting in what is (without any quibble about words)

really meant by it. It can also be effected by enamels; but that is glass enamelling, not glass painting, and very objectionable for the reasons (only with the favourable exceptions) I have mentioned. So then truly there can be no modulation of colours on glass. How can the painter get the grey between the light and the purpled shadow of a ruby-coloured drapery? How can he get the thousand and one tints of sky and earth into its reflected light? How can he soften off its edge?

Then take the effects of "atmospheric perspective." These are mainly producible by the same processes. Things in nature are cleared from each other, not by any means so much by their colours as by the air between them. There is nothing more delicate than this in all painting. But these are unattainable by the glass-painter. He can only approach them by the ingenious use of forms, and by suggesting (however untruly in a realistic point of view) the idea of proximity by strong colours, and distance by the more delicate.

In spite of all these limitations to which he is subjected, I do not feel that his art is lowered, for art does not depend on perfection of representation. Such perfection would at once be the loss of all its poetry. I believe that each art has its distinctive genius and capabilities; that there is a something which each can do the best; and that, failing that, the fault lies rather with the artist than with his materials.

Michelangelo would be as great in terra cotta as in the finest marble. What, then, is the glass-painter to do? I am confident that the secret of his success lies in this, that his designs must be made entirely with reference to the powers and limits of his art,—that the designs of Michelangelo himself would be utter failures unless made unreservedly upon such a model. An idea is prevalent that copies may be made from great old pictures, or that designs may be obtained with great advantage from the leading artists of the day. But I am confident that it would be an injury rather than an advantage that artists, however great in figures, landscape, or genre, should be so employed unless they do it with a thorough knowledge of the peculiar qualities and limitations of what they work for; that in their pictures they may revel in the poetry of shadow, but that in glass they must design for the effects of light; that their canvas may be a broad, open space to work for, but that glass (even for the common purpose of its safety) must be broken up into small pieces; that every form must be definite from the mechanism by which those pieces are joined; and that the light, even of the most mellow glass, is too great for the eye to bear it long; so that his composition should be broad, clear, sculpturesque, rather than pictorial, but beautiful, delicate, or powerful, to the utmost of his art. What, then, unreservedly are these powers and limitations of the glass-painter? His powers? He has the whole beauty of the rainbow and the whole power of the sun at his disposal. What are his limitations? They resolve themselves into two, the impossibility of colour-gradation and the rigid obligation of severity of outline in the use of his leads. The result, therefore, is that his works are characterized by a certain flatness of effect, more in the character of a bas-relief than the atmosphere of a picture. This peculiarity is by no means peculiar to the essentially Gothic art of glass-painting. At a period of Classic art in Greece, perhaps unequalled by any other for refined purity of design, wall-painting was constantly executed in this manner. Figures, and even groups of figures, were thus painted with no more than sometimes a mere faint line to stand upon, and without any accessories of background. It is impossible to imagine the science of design put to a severer trial, or a more perfect and pure ideal of painting in connexion with architecture. And I adjure him not to disguise this essential peculiarity, and so to falsify his art. It would be as unreasonable for a composer to complain that his instrument had not the power of an orchestra, or a sculptor that his marble was debarred from the accessories possible to canvas, as for a glass-painter to complain of his glass. But, above all things, let him remember this, that, before he can be an artist in glass, he must first be in verity an *artist*.

In respect to the variety of styles, the Classic, Gothic, Renaissance, and Modern, which is most intimately connected with the subject of glass-painting, there can be no doubt of this, that to reduce everything to the mere dead level of modernism would be to deprive the world of that invaluable means for expressing the many phases of beauty which depend entirely upon the characteristics of particular styles,—that they are, in fact, the expression of the widest range of human feeling; for, excepting literature, all that remains to earth of the hearts and souls of the best men is in their arts.

The objection is made, "But why copy them? Why bind down your wider knowledge to the limits of their comparative imperfections?" I can only say, in reply, Who in his senses would ever, or what man with a spark of genius ever could, advocate such a course? The objection is one of those bugbears which gentlemen of certain opinions are constantly raising—gentlemen whose judgment seems to be a good deal affected by temper and a little by prejudice.

The imperfections of old art are most patent and followed only by those who know, and are capable of, no better. But I hold that there is a latent beauty beneath the crust of those imperfections that you have failed to perceive; that there are there more than the vigour of strong feeling and the earnestness of purpose, which even you in some sort allow; but that there is a perfect sense of the relation of one art to another, a most genuine poetic sense in their employment, a modesty in self, a keen perception of the fitness of materials, and of the appropriateness of the character of their design to all the qualities of them, to be found as the guiding principles in those works, which it is impossible to overrate—guiding principles, which, if some modern had equally perceived, they would have succeeded where now they have failed.

I grieve at the discredit that has been brought upon old art by the atrocities committed by incompetent imitators. To them the mere archaisms and exaggerations of expression have been the low ideal of those arts. They have missed the latent beauty, and made bad copies of the crust. Those artists of old days felt of beauty as we do, though they had no academical rules for its display: they felt all the poetry of human passion as we do, though they had no axioms for its embodiment in art; and, under their exceeding disadvantages, with no rules to guide, no experience of the past to enlighten them, it is *less* their fault that they expressed their strong feelings faultily, than it is ours that we are so blind—eye-blind and heart-blind—to perceive them. Neither do I perceive at all that the modified flatness of representation necessary to glass deprives it of the means of aiming at and of obtaining a very high order of art. For what is high art? Surely the greatest art is that which expresses the greatest idea; and, as I believe that this great result overrides all technicalities of material, I see no reason why its attainment is not as possible for the glass-painter as for them who find expression for the yearnings of a big heart in the other poor and weak resources of stone or marble, of metal or of paint. And I would that the glass-painter would lay such an ideal before him; that, even if it were possible, glass-painters could form themselves into a guild, and exclude those unworthy pretenders who do but poison public taste, and dishonour the credit of a noble profession. But such a happy result would be disallowed by the axioms of modern liberty, which sanctifies by its licence all things bad.

The only other hope for the elevation of this beautiful art lies in this,—that those who have power should refrain from its abuse; that in all the honourableness of self-discipline they should put quality before quantity; and then (pardon me for adding) work for the high aim in their art, rather than for high balances in their ledger.

With such sentiments, then, as these would I close this address to all the artists and amateurs interested in this beautiful art. Let the glass-painter do honour to his glass! Let there be no hesitation about it,—no wretched condescension to mislead those who gaze upon it. Let it be glass without mistake; parading nothing, pretending nothing; but honoured even in its weakness, and treated with justice, even to its defects. Why envy the qualities, or even the excellences of other arts?—or, why dread the genuine light of day, the open sun and passing cloud (which are as death and destruction to the oil-painter and the fresco-painter)?

Have you not gems to play with—a very flood of gems to toss about, and to let your thoughts revel in? Do you fear their gayness and vivacity? What if the diamond, ruby, and emerald have a fire which no art can equal, except yours alone? Have you not also the mellow richness of the jacinth, the softness of the chrysophsan, the tenderness of the pearl? If you fear them, leave them! If you use them, use them and glory in them! but use them within the limits of an educated sense. Treat them with that mingled modesty and confidence which have ever been and ever must be the characteristics of disciplined genius. You have entered the temple of the arts with the most precious jewels in your hands. Ignorance and self-conceit are sacrilege here. Sordid motives are sacrilege here.

It might have been well for the great men of former days to have played with their art—confident in their principles, but modest in themselves. But glass-painting is no easy and light matter. The mere material itself is so beautiful that the eyes of the vulgar are dazzled and deceived by it; but it needs the utmost tact in its management, and genius, and labour long and hard, for its success.

Let, then, no wilful, no untrained hand meddle with it—let no vain spirit of self-taught genius intrude upon it; for such a one who thus violates the sanctity of the art will cut the throat of all his hopes and reputation, as surely as the glass will cut his fingers.

THE SAVOY CHAPEL.

THE Queen has graciously taken upon herself the cost of restoring the ruined chapel, and Professor Smirke, R.A., has surveyed the ruins with reference to the probable cost. In 1843, her Majesty, as "Duchess of Lancaster," did the same thing. George III., according to a tablet still on the outside of the church, paid the cost of its repair in 1826 and 1830, as George I. had done in 1721. Unfortunately, however, all the Queen's horses and all the Queen's men cannot put Humpty-dumpty again as he was before; and the disaster should lead to increased carefulness in respect of other remnants of the past. Little remains but the walls. Most of the monuments are destroyed, including that of Dryden's "Vestal Virgin of the Skies," Anne Killigrew, "A Grace for beauty, and a Muse for wit." What has become of the Gawain Douglas brass we did not notice.

The history of the Savoy Palace is curious. The founder of it was Peter de Savoy, brother of Boniface, Archbishop of Canterbury, and uncle of Eleanor, Queen of Henry III. This Peter was knighted publicly in Westminster Abbey (1245) and was created Earl of Savoy and Richmond. Many vicissitudes happened to this building. It next became the property of the friars of Mountjoy, and then Eleanor purchased it again for her son Edmund, Earl of Lancaster, father of the earl who was beheaded for treason in the reign of Edward II. John of Gaunt married the daughter and heiress of the Duke of Lancaster, and he became tenant of the Savoy Palace. The battle of Poictiers (1356) resulted, we all know, in the defeat of King John of France. On the 24th of April, 1357, the Black Prince rode through London with King John of France, and the captive king lived in the palace, where the English king and the prince "went frequently to see him." King John returned to his country in hopes of making terms of peace; but, being unsuccessful, he returned to England, and died in the Savoy in 1364. The Savoy Palace next became an hospital in the time of Henry VII. In the reign of his successor there was an establishment of a master and four chaplains, and then the hospital was suppressed after a time. Of this institution all traces are swept away except the chapel which has just been destroyed by fire.

The chapel was built in 1505. The ceiling, which has been entirely destroyed, was the most striking feature of the interior. It was wholly of oak and pear-tree, and divided into 138 quatrefoil panels, each enriched with a carved ornament either of sacred or historical significance. The panels numbered twenty-three in the length of the chapel and six in its width. Ten of the ranges had each a shield in the centre presenting in high relief some feature or emblem of the passion and death of the Saviour, and all devised and arranged in a style of which there are many examples in sacred edifices of the fifteenth and sixteenth centuries. The panels throughout the rest of the ceiling contained bearings or badges indicating the various families from which the royal lineage was derived, and more particularly the alliances of the House of Lancaster, each panel being surrounded by a wreath richly blazoned and tinted with the livery colours of the different families. The various devices in the ceiling are minutely explained in a published work by Mr. Willement. The altar-piece (designed by

Sir Reginald Bray), and the large stained glass window surmounting it, have been entirely destroyed. "This window was glazed at the cost of the congregation, in honour of God, and in gratitude to our Queen Victoria."

Fuller, the church historian, was once lecturer at the chapel; and Cowley, the poet, was a candidate for the appointment. Wither, the poet, and William Hilton, the painter, were buried there.

In early times, a right of sanctuary was claimed for the Savoy. A letter to Lord Burleigh in 1581, as to an outbreak of rogues, says, "The chief nurserie of all these evell people is the Savoy, and the brick kilnes near Islington."

THE PHILOLOGY OF ARCHITECTURAL TERMS.*

MR. PICTON, well known to most of our readers as an able and popular Liverpool architect, now appears in quite a new aspect,—that of a philologist. The papers in the volume of which we are about to speak were read mainly before the Literary and Philosophical Society of Liverpool, of which he is the president; and the chapter on the philology of architectural terms was read before the Liverpool Architectural and Archæological Society. The first are divided into two parts. In the first part Mr. Picton gives a general view of the grammatical forms of the Gothic language, and of the relations in which they stand both to what may be called the affiliated tongues of the Teutonic stock, on the one hand, and to the Sanskrit and classical languages on the other. In the second part he treats of the substance or vocabulary of the language.

In the outset, the author remarks that,—

"From the mere desultory acquisition of separate languages, Philology began to assume the character of one of the exact sciences. The keen searching power of modern analysis, brought to bear on the mass of facts previously accumulated, has gradually elicited order out of chaos, has illustrated the existence of fixed law where irregularity and caprice had been held as dominant, and has discovered relationships heretofore unconceived between the most distant races of mankind.

If Geology teaches us to read the history of our planet in its wondrous revolutions, and in the succession of organised beings previous to the advent of mankind, the Science of Language takes up, so to speak, the thread of the narrative where Geology ceases to inform; and, far beyond the first dawn of history, reflects a light, obtainable from no other source, on the earliest condition and the progress of the human race."

Of this we are persuaded, that geology will ere long shed a light on the science of language itself of which few have as yet any conception. The *progress* of peoples and of languages has already been traced *downwards* along the course of some of the great rivers of the East, flowing from Upper Asia eastwards; and now that the error as to the geological time of man's advent on the planet is being cleared away, still further discoveries, of a like nature, will probably be made; such, for example, as that involved in the fact that there is more analogy between some of the peoples and languages of Upper Asia and those of the Caucasus than between either and any intermediate region; a circumstance which seems to imply that at a period when the highlands of the sub-Himalayas, for example, and the Caucasus, were above the ocean, and the intermediate region below it, mankind already existed; and that it was thus also that the Caucasian type of man became afterwards so general in the western world. Something similar is also already known to have occurred in India, where various races, including the Aryans, were, as it were, intruded, between the highlanders of the sub-Himalayas and those of the southern highlands of India, the inhabitants of which highlands were therefore probably of more ancient origin than the lowlanders, in a national point of view. In the West, the question of the origin and relationships of Celtic highlanders thus becomes enhanced in interest; and the strange traditionary fascination which *continental* peoples, according to Bailey, have for *islands* begins to be accountable. Scandinavia is high ground compared with the general level of Russia and even of Europe: hence the antiquity and the ramifications in Europe of its peoples and its languages. And the geological period when the low levels of Europe and Asia were below water is not so very ancient, comparatively speaking, as may be supposed: indeed, during the glacial era itself, many low lands were strewed with boulders and *débris*, evidently dropped from glaciers, floating and melting in a wide ocean studded with islands; and, in Homer's time, it appears, there was a tradition that an ocean was known to have once spread northwards through Russia from the Mediterranean.

But our purpose was merely to make some use of Mr. Picton's chapter on the philology of architectural terms; and to a few gleanings in that respect we must now restrict ourselves.

In its present application the term *building* occupies æsthetically a lower position than *architecture*, the former meaning with us simple construction, whilst the latter is understood to indicate something in addition in the nature of design. Such was not the case originally. The words come down to us from different sources, and have in the course of their transmission completely changed their primitive signification.

The original word for building and construction in our Anglo-Saxon mother tongue is *timbrian*, which has its equivalent in every Teutonic dialect:—

Gothic,	timrjan
Swedish,	timbra.
Old High German,	zimbaron.
Modern German	zimmern.
Holl.,	timmeren.

This did not originally signify necessarily *wooden* construction, but was applied to every material indifferently. As, however, wood was the principal material employed by our ancestors for building during the Saxon period, timber and wood became in time synonymous terms.

To *build* originally meant to form, shape, fashion, design.

Anglo-Saxon,	Byldan.
Old High German,	Bildon.

In modern German it has retained this meaning exclusively, and is applied both to sculpture and painting. In our own tongue, from being applied to the ornamental portion of the wooden structures, it gradually extended itself to the general construction, and superseded the ancient *timbrian*.

The modern term *architecture*, which has sprung up since the revival of classical literature, and can hardly be traced farther back than the time of Milton, was originally applied to simple building. The Sanskrit root *trach*, to cover, is found in one form or other in all the Aryan tongues.

Greek, τέκτων.
Latin, *tego*.
Old German, *dahjan*, whence *dach*, a roof, and *deck*, the covering of a ship.
Anglo-Saxon, *theccan*, to cover, whence *thatch*, a straw roof.

The Greek τέκτων was the carpenter who framed the roof, ἀρχιτέκτων was the chief of the workmen. The word is first used by Herodotus, but rather in the sense of engineer than of artistic designer. It is afterwards employed by Plato; and, along with Greek art, was borrowed by the Romans; from whom, principally through the treatise of Vitruvius, we have derived it, and brought it into general use with its modern acceptation.

The word *house*, in the sense of habitation, is identical in all the Teutonic and Norse tongues, varied slightly in form. A similar word exists in some of the Slavonian dialects. The radical is not found either in Greek or Sanskrit. It is impossible, therefore, to ascertain any leading idea in the root beyond its uniform meaning of a dwelling-place.

The *door* is still wider in its use. We trace it in the Sanskrit *dwara*, Greek Θύρα, Latin *for-is*, Persian *der*, Slavonic *door*, Hib. *dor*, Cymric *dor*, Old German *daur*, Anglo-Saxon *duru*, &c. This term also, like *house*, seems to be itself a root.

The original meaning of the term *wall* was an earthen mound, Latin *vallum*. The corresponding term in German is *maur*. Both are probably derived from the Latin, *vallum* and *murus*, the former not unlikely through the Cambrian *gwall*.

If the term *wall* is not indigenous we cannot expect to find the materials of which it is constructed of native growth.

Stone is a word found in all the Teutonic tongues. Its primitive signification is that of *rock*, the original root being found in the Sanskrit *s'tha*, indicating stability—the absence of motion. Its application to separate fragments is a secondary meaning of later date.

The word *brick* is not found in Anglo-Saxon, nor is it found in German, ancient or modern. It has been attempted by some etymologists to derive this word from *brechan*, Latin *frang-o*, Sanskrit *bhranj*, to break.

Mortar again is not an indigenous term. There is no equivalent for it in Anglo-Saxon, and in German the Latin name has had to be borrowed, slightly changed in form. *Mortarium* originally meant a vessel in which ingredients were bruised, as we now employ the term in one sense. It was then transferred to the large hole or basin in which lime and sand were mixed. So it is employed by Vitruvius. By a natural metonymy, the word came to mean the materials bruised and mixed up in the *mortarium*, and is so also employed by Vitruvius. The term has continued in use down to the present time, passing into the French *mortier*, German *mörtel*, and English *mortar*.

The term *cement* has undergone a singular transformation from its original meaning. *Cæmentum*, more commonly used in the plural *cæmenta*, meant originally in Latin rubble stone as it came from the quarry.

From rubble stone, *cæmentum* was applied to marble chippings, which were ground up and mixed with lime and sand for plastering. During the Middle Ages *cæmentare* meant to build; and *cæmentarius* was the name of a walling mason. But as most of the thick walls in the castle-building period were cored with rubble grouting, the *cæmentum* gradually came to mean the plastic material which formed the matrix. The word now has come to mean in general parlance any plastic substance which unites two hard bodies. As a building term it is almost exclusively confined to the so-called Roman cement, which owes its hydraulic properties to the combination of lime with iron, silica, and alumina.

Lime is another name for building material which has equally departed from its original meaning, but in an opposite direction. The root is indigenous in all the Teutonic tongues, and is found in the Latin *lim-us*. Its primitive meaning is clay, mud, slime, anything sticky or adhesive. We have retained it in that sense in the word *bird-lime*. In the other languages it has never changed its meaning, but in English it has come to mean the solid mineral which is calcined for mortar.

In Gothic *window* is called *auga-daur*, eye-door. In old Norse it is *glar-glugg*, light-hole. In old German it is *tag loch*, which has the same signification. In old Saxon it is *eagh-thyrl*, eye-hole: *wind-oga* the eye or hole for the wind, has been softened into the modern *window*.

Sill—door-sill, window-sill. This is an indigenous term, Anglo-Saxon *syl*, German *saul*, French *seuil*, which is doubtless akin with the Latin *sol-um*, meaning the plate on the ground.

Another name for a door-sill, *threshold*, was probably first applied to the log placed across the barn door to prevent the grain and straw from being driven outside. It does not exist in the kindred tongues.

Lintel is of French derivation; Latin *limen*, *limentellum*. It is not found in German or Norse.

Roof is the Anglo-Saxon *hroof* from *hrafnan* to uphold, support.

The term *gable* originally meant anything in a furcated form, and was applied in Anglo-Saxon, *geflas*, both to the main rafters of a building and to the *gallows*, which is merely a modification of the same word. It is found in Gothic *gibla*, Swedish *gafwel*, German *gibel*, in the same sense as our *gable*.

The *rafters* are the supporters, Anglo-Saxon *rafter*, from *rafnian*, to bear.

Tile is of comparatively late introduction, though found in Anglo-Saxon. It is derived from Latin *tegula*, either through German *tigel* or French *tuile*.

Slate as a covering is not found in Anglo-Saxon, but the word is indigenous, being derived from *slitan*, German *schlitzen*, to rend asunder, to split. Its earliest appearance is about the time of Wickliffe, the middle of the fourteenth century.

The *ridge* sufficiently explains itself.

Chimney is an exotic in all modern languages, neither the thing nor the word having been known until the twelfth century. The word is derived through the French *cheminée*, Italian *camino*, Latin *caminus*, from the Greek κάμινος, a furnace, which of necessity had a pipe or flue connected with it.

One of the first improvements in the Anglo-Saxon house was the construction of an upper chamber with a boarded floor. This seems to have been an indigenous improvement, as the terms employed are partly of native origin. The chamber was called the *solere*, and in the Middle Ages the *solar* or *soller*. The term seems to apply to the separate floor, from the old German *sulan*, Gothic *suljan*, to stand upon. The apart-

* "Philological Papers; comprising Notes on the Ancient Gothic Language; with a Chapter on the Philology of Architectural Terms." By J. A. Picton, F.S.A. Liverpool: printed, for private distribution only, by T. Brakell, Cook-street. 1864.

ment under the solere was called the *cellar*, German *keller*, French *cellier*, and was used for keeping provisions and stores, entering from the outside. The derivation may be from old German *kele*, a hollow place, but has more probably descended through the French from the Latin *cella*, a storeroom or granary. There is some confusion in the use of these terms owing to their similarity in sound.

The *solar* or upper room led to the necessity for stairs. This is a pure Anglo-Saxon word, originally *stogers*, from *stigan*, to ascend, mount upwards. A boarded floor required *joists* to support it. The derivation of this word is obscure. The most plausible is that from the old French word *adjouster*, to place in order, adjust.

Breast-summer or bressummer is an application of the French *sommier* or main beam, supporting the breast or front of a building.

The word *girder* is now used for the main timbers of a floor, but in its origin it rather meant a tie, from Anglo-Saxon *gyrdan*, to gird, bind round.

Most of our modern terms of carpentry, such as tie-beam, rafter, ridge, strut, king and queen post, valley, wall-plate, pole-plate, sufficiently explain themselves.

The words *carpenter*, *carpentry*, are derived from the Latin, through the French.

Most of our terms used in joinery are derived from the French, who preceded this country in the art.

Mr. Picton's philological disquisitions are both clever and interesting, although, no doubt, other philologists will be quite ready to pick holes in them.

It was in student-days when we first made the acquaintance of Mr. Picton, now some years ago,—the days of poor London and the *Architectural Magazine*. From that time to this he has been steadily building up reputation and fortune, and quietly earning the increasing respect of his fellow-citizens. Liverpool holds Mr. Picton in high esteem, and has good reason for doing so. We avail ourselves gladly of the present opportunity to point, with much regard, to an honourable and successful career.

THE SAD STORY OF THE "GREAT EASTERN" STEAM-SHIP.

THE *Great Eastern* steam-ship, which but four years since was the wonder of the day, was sold in February last at public auction for 25,000*l.*, scarcely one-third of its value as old materials.

This is another instance, added to many, of great expectations disappointed, of genius wasted, and of enterprise thwarted. It is the last act in the history of one of our first limited liability companies, and I hope you will agree with me that it may be useful to record some of the principal facts which appear to have led to this lamentable termination of an enterprise which promised the greatest results.

This ship originally belonged to the Eastern Steam Navigation Company,—a company established to carry the Indian and China mails by the long sea route, the political advantages of which the directors hoped would have induced the Government to give them a mail contract on favourable terms.

In this they were disappointed: the influence of the Peninsular and Oriental Company was too strong for them; but they were not disheartened, and immediately turned their attention to the consideration of the question whether ships could be built and profitably worked to carry mails and passengers as quickly and more cheaply than by the overland route, without the aid of a Government subsidy. The result of their inquiries led to the construction of the *Great Eastern*, the particulars of which were first announced in a report presented to an extraordinary general meeting of the company, held on the 12th of July, 1852.

In August, 1853, full particulars of the proposed ship were laid before the proprietors; by March, 1854, the contracts for the hull and machinery were taken; and, in July, Mr. Brunel presented his first report on the progress of the works.

In February, 1855, the directors submitted a report containing an elaborate and very interesting account of the progress of the ship to that time. In 1857 all the available capital of the company had been expended; and in February, 1858, after the launch, the necessity for raising further funds to complete the ship was announced; and here arose the first of a series of blunders, which have terminated in the sale of the ship by public auction.

Instead of trying the ship as she was launched with the machinery, coals, ballast, and rigging necessary to navigate her, so as to ascertain what might be her deficiencies, and how to remedy them, very little short of 100,000*l.* was spent before she was tried, in the general outfit of the ship, and in fittings and decorations of the most expensive character, delaying thereby for many months her trial trip, and very much increasing the loss caused by the accident which subsequently befel her.

It was this unwise expenditure which first placed the company in serious pecuniary difficulties, and led to the conversion of the Eastern Steam-ship Company into the "Great Ship Company, Limited."

In November, 1858, the prospectus of the new company was issued. The capital which was to buy the ship, to cover all existing liabilities, and to provide ample funds to work her, was 380,000*l.*

In the autumn of 1859 she went to sea, and the first accident occurred off Hastings; and from this time to the day of her sale almost every casualty which could befall a ship occurred to her, without causing any material injury to her hull or machinery. The bursting of a boiler of the size and strength of those in this ship would have destroyed any other ship afloat; but she pursued her way to Portland after the accident, without even stopping for a moment.

She rode out a gale in Holyhead Harbour, proving the utility of her double motive power. She encountered a hurricane in the Atlantic, which disabled her rudder and damaged her paddles, and left her for three or four days rolling about in the trough of a heavy sea.

She ran upon a rock at New York, and broke her bottom plates for a length of 80 feet, which were repaired while afloat, and without going into dock; and she came home safely.

During this period directors of known position gradually withdrew from the board, till the company was left to the care of the four late directors, who, after the fall of the ship financially, finish their career by calling a special meeting of shareholders, to inform them that they have no plan to propose and no policy to pursue to improve the position of the company; and that, unless 30,000*l.* could be raised, the ship must be sold by auction in fourteen days.

The shareholders try to resist this lamentable result, but ineffectually; and, upon inquiry, they find that the directors, anxious apparently to avoid the odium of being the parties to carry the company through the Bankruptcy Court, proceedings against the company having been already commenced, have sold their shares, and left the ship in the hands of the trustees of the mortgagees for sale.

This sale has since taken place, and 25,000*l.* is all that has been realised for the expenditure of 1,000,000*l.* of capital.

I propose, then, having given this brief account of the present insolvent position of the Great Ship Company, to inquire whether it can be attributed to the operation of the new law of limited liability making directors careless and inattentive to their duties; or whether it be due to mismanagement arising from incapacity and ignorance; or whether it be the result of a policy calculated to satisfy the unthinking public, the shareholders, and the creditors, that the difficulties inherent to the management of this great and novel enterprise have necessarily led to so lamentable a result.

The result, produced by whatever cause, may be thus stated:—1,000,000*l.* has been spent, and nothing remains for the shareholders, original or preferential, or for the bondholders; for the 25,000*l.* realised at public sale for the ship will be hardly sufficient to pay the preference creditors and the law expenses. Everything available, including office furniture, was sold before the directors disqualified themselves, though they did not forget to send in claims for half-year's fees in arrear; and all that is left besides the balance of the 25,000*l.*, after paying expenses and preference claims, is 15*l.*, which is in the hands of the official liquidator.

The ship has been bought for this ridiculously small sum by a new company, of which three of the late directors of the Great Ship Company are the principal shareholders and directors.

Surely this is a state of things which deserves, may demands, inquiry, especially just now, when limited liability companies are increasing in number so rapidly; for if the directors of a limited company can with impunity waste all the property intrusted to their care, and leave a large amount of debt, without anything whatever to meet it, and without any legal responsibility or accountability, some new provisions are most assuredly required.

No private trader in times past could waste his creditors' property, without incurring any responsibility; and it appears impossible that when the accounts of the company are rendered to the Court of Chancery, some persons can escape severe censure. Let us, then, endeavour to trace the progress of the mismanagement of this unfortunate company.

The ship was designed and built for the Eastern or Indian trade. Every appliance and fitting was designed for a long voyage, the capacity for cargo, the space allotted for fuel, the smallness of her power compared with her tonnage, her size, her height between decks, the special attention paid to ventilation, were all considered, and provided for a long and mainly tropical voyage. But the directors into whose hands she fell, either ignorant of the suitability of the ship for what she was intended, or wedded to other views, decided upon placing her on short voyages in northern latitudes, where the arrangements applicable to tropical climates became a source of discomfort, where her capacity for fuel was unnecessary, where her splendid accommodation for first and second class passengers was useless, where her speed was not so superior to every rival as to give her any practical advantage, and where indeed every special peculiarity in her construction, size, power, and economy of management became rather sources of loss than of advantage.

I will assume that when the directors first determined to divert her from her original destination, they believed it would be beneficial to the shareholders; but on what principle of profit they kept her on the American line, when each of the eleven voyages produced a large loss, exclusive of the heavy staff expenses at Liverpool and New York, is quite unaccountable.

This system of losing by every voyage was persisted in by the directors, notwithstanding continual warnings, and the actual results published in their annual balance-sheets, till we arrive at the special meeting held on the 2nd October, 1863, when the shareholders were told by the chairman that all their money was spent, that they had no more credit, that their borrowing powers were exhausted, and that the ship would be sold by the sheriff unless 30,000*l.* were raised in fourteen days.

This meeting was adjourned, in opposition to the wishes of the directors, in order to give the shareholders time, little though it was, to satisfy themselves as to the exact financial state of the company, and a committee was appointed to ascertain whether any means could be devised to relieve the company from its difficulties; but before the special committee could read their report to the adjourned meeting, held on Monday, the 15th of October, the chairman announced, that on the previous Saturday he had called a meeting of bondholders, and that they had, in conformity with the powers conferred upon them in the mortgage deed, instructed the trustees who held the mortgage to sell the ship by auction, and that the ship was no longer in the possession of the shareholders, so that whatever they might resolve at the meeting would be of no avail. This announcement, accompanied, as it was, by most damaging statements, completely neutralized any efforts the committee could make to revive the company; and it was found impossible, in the face of the insolvent condition in which the chairman represented it to be, to raise funds to liquidate the pressing claims, and to repair and refit the ship. She was therefore left in the hands of the bondholders, and the winding up of the company in court was proceeded with.

The trustees to the bondholders, in whose hands the ship was placed from this date, are three in number. Mr. Jones, of Oswestry, generally supposed to represent the late chairman; Mr. Brereton, the consulting engineer to the company, and apparently representing the general body of bondholders; and Mr. Stevenson, of the Great Western Railway, the colleague in that company of another great ship director, Mr. Gooch.

These gentlemen had the following propositions submitted to them before the ship was sold by auction, in February.

The first, immediately after she was bought in at public sale, was to the effect that they should give the ship in offer to certain parties for twenty-one days, at 130,000*l.*, the reserved price

CONGLETON TOWN HALL.

at the sale, when there was but one bid for 50,000*l*. At that time there would have been no difficulty in forming a company with capital, had a little time been given to make the necessary arrangements. This was refused without any other reason being assigned than that it precluded the trustees accepting any better offer during the three weeks.

The next offer was made a month later by bondholders attending the meeting called by the trustees, who offered 120,000*l*., subject to an option for seven days. This was refused, when the original offer of 130,000*l*., subject to the same condition as before, was renewed.

The parties to the offer of 130,000*l*. stated that their reason for requiring the option of purchase for three weeks was that, after all the late directors had said about the ship, and the accidents which had befallen her, it was necessary before they embarked the large sum to purchase her, and to complete the repairs admitted to be indispensable before she could go an Indian voyage, that competent engineering opinions should be obtained respecting her.

Notwithstanding the refusal of the trustees to entertain their proposition, these gentlemen engaged the services of Mr. Wm. Fairbairn, of Manchester, and others, to inspect and survey the ship; but, unfortunately, their reports could not be obtained in time to form a company before the day fixed for the sale, and this expense and trouble were wasted.

Mr. Fairbairn's report, which has since been printed, proved the value of the ship, and upon it a company would certainly have been formed had there been sufficient time before the sale. The consequence, then, of the refusal of the trustees to give the option of purchase for three weeks to the gentlemen who incurred the expense and trouble of these surveys, was that two or three days afterwards the ship was sold by auction to the new company to which we have already referred.

It is a singular and somewhat anomalous position in which some of the directors of the company have placed themselves. They were the acting directors of the Great Ship Company, when the first winding-up petition to the Court was presented. They then sold their shares in the company, and became disqualified to act as directors; but being large bondholders, they retained their control over the ship. By their influence and votes the trustees were obliged to put up the ship for sale by auction; by their influence and advice the trustees refused to entertain the offers made for the ship after the first offer for sale by auction; and ultimately, under the same influence, the bondholders sell the ship for 25,000*l*. to a company of which three of the directors of the old company and the principal bondholders are directors and shareholders.

They are now, therefore, in possession of a valuable property, upon which, whilst it was under their management as directors of the Great Ship Company, 550,000*l*. have been sunk and lost; and the next question arises, what will they now do with her that they could not have done as directors of that company, and for the benefit of the whole body of mortgagees and shareholders?

First, then, *immediately after* they obtain

CONGLETON TOWN HALL.—MR. E. W. GODWIN, ARCHITECT.

possession of her, they complete an agreement for letting the ship to the Atlantic Telegraph Company. For this they are to receive 50,000*l.* of the company's paid-up shares, besides the repair of the ship and her care and maintenance during the twenty or twenty-four months she is to be employed by that company. What will become of her then no one can predict. It is understood her paddle-engines are to be removed, so that she will never be tried as originally designed; and report has already assigned her to the French Government.

But whether this be so or not, the "Great Ship Company (Limited)," will sink into oblivion and be forgotten, except as a company that has wasted nearly 500,000*l.* of capital, and 40,000*l.* or 50,000*l.* of creditors' money, and has passed out of existence, through the Bankruptcy Court, without paying a fraction of a penny in the pound on this large amount of capital and debt, the entire assets of the company being under 20*l.*

CONGLETON TOWN HALL.

THE accompanying view and plans illustrate the new Town-hall for Congleton, designed by Mr. E. W. Godwin, architect. It includes a court-room, assembly-room, and public reading-room. The assembly-room, to seat 1,000 persons, has a retiring-room at the platform end, which will be found useful for the speakers or singers in the case of public meetings or concerts. The court-room, it will be seen, is on the first-floor, and is lighted from above, as the assembly-room is.

The frontage being only 71 feet, breaks have been avoided, to get as much breadth of effect as was practicable.

The arches of the windows are filled in with the small round glass manufactured in Germany. The front is of local stone. The statues introduced have reference to the history of the town.

The tower measures to the apex 110 feet: the clock is elevated to the top of it, that it may be seen from the Market-place as well as from the principal streets.

We shall have another opportunity to go more fully into details.

THE HORTICULTURAL GARDENS.

THE Duke of Buccleuch's *conversazione*, as president of the Royal Horticultural Society, to the Fellows of the Society, who assembled in force at the Kensington Museum, to meet the Prince and Princess of Wales, was a very successful one. There was an exhibition of bouquet-holders, flower-stands, vases, and other objects of interest, including some sculpture. The Prince and Princess of Wales remained for some time (in the gallery), and examined with interest the objects exhibited.

From a correspondence between General Grey on the part of her Majesty and Mr. A. Murray, the Society's secretary, it appears that her Majesty, while expressing the gratification which she received from her recent visit to the gardens, authorized General Grey to suggest the annual opening of the gardens, *free*, to the public, on the anniversary of the late Prince Consort's birthday,—the 26th August, as an arrangement which would be especially gratifying to her Majesty, on account of the interest taken in the gardens by the Prince Consort. To this suggestion Mr. Murray informed General Grey that the council of the Society had great pleasure in assenting.

BRADFIELD RESERVOIR FAILURE.

THE outlet pipes of the Bradfield reservoir have been closely examined and tested during the week, the result proving that the bursting of the reservoir was not due to any default in the outlet pipe. The main was tested with a force equalling double that excited by the waters of the reservoir, without any leakage taking place. A man was then sent through the large pipe; and, after closely examining the joints, which were found to be faultless, he placed lighted candles at regular intervals throughout the whole length. On observing these from either end, the row of lights formed one even and unbroken line, thus proving the uniform level of the bed of the pipes. The theory that the accident was caused by the pipes giving way in the embankment, is thus entirely disproved. Every day seems to show more clearly that the view we took of the cause of the disaster was the correct one.

THE FRENCH GALLERY.

M. GLEIN'S last picture, painted for the Emperor of the French, and representing the reception of the Emperor in the Bay of Genoa, nearly fills one side of the apartment, and has occupied the artist some four years. The gallery is not large enough to admit of its being seen to greatest advantage. The general grand arrangement, skilful perspective, and aërial effect cannot be fully estimated on a near view, while the stiffness, and in some cases comparatively poor painting, of the figures scanned separately, force themselves on the attention. Some of the figures,—as, for example, in the barge bearing the Emperor, and a prominent female figure on the right of the spectator,—seem, indeed, to call for revision. The scene is one of great enthusiasm: crowds fill every available space: the rigging is alive: the decks swarm: the sun pours a sudden ray of light on the central object, the point to which all look; and the sea, sprinkled with bouquets of flowers, has the aspect of a vast parterre, in the midst of which some black sailors bear up, as from the deep, a floral crown. It was interesting at the private view to see our own veteran Stanfield going over it, piece by piece, with the distinguished painter of the picture.

THE LUDGATE STATION OF THE DOVER RAILWAY, BRIDGE STREET.

THE works in connexion with this important station on the Ludgate extension of the London, Chatham, and Dover line, from the projected new street at Earl-street, Blackfriars, to the Mansion House, to its junction with the Metropolitan at Farringdon-road, are now in such a forward state of progress that we may furnish a brief account of them.

The western front of the station facing Bridge-street will stand recessed from the true line of the carriage- and foot-way on the eastern side, to a depth of 30 feet, so as to give sufficient room out of the main thoroughfare for a hackney-carriage stand and for vehicular traffic to and from the booking-offices and the arrival and departure platforms, which will have a length of about 1,500 feet. The principal front will be 450 yards long. The northern one, in Little Bridge-street, and the southern, near the new Earl-street, will pass over Union-street nearly in a line with the front of the *Times* printing-office, close by Playhouse-yard. The whole of these works will be similar in style of building to the station at Blackfriars-road, and will correspond, consequently, in every respect with the other stations on the line, with the exception that the one in Bridge-street will be more elaborately adorned than the other buildings. A room, 68 feet square on ground plan, but laid out for staircases and other conveniences, so as to have partly an octagonal and partly a semicircular appearance, will be erected for the purposes of ticket-offices, &c., with an extensive refreshment department ranging the whole length of the rear of the building. The whole of the waiting, refreshment, and first and second-class rooms, with the booking-offices, will be tastefully fitted up, the ceiling over head being formed of the iron girders of the line, supported by iron columns. The descent from the platforms on the arrival of the trains will be so arranged that there will be no interference with parties going by starting trains, the staircases for egress being quite independent of the means of access to the platforms to be used for departure. Mr. Thomas is the engineer; and Mr. George Sharp the clerk of the works; Mr. Barnes being the agent to Messrs. Peto & Betts, who are the contractors for the Ludgate station (City extension) works of the railway. Mr. Taylor, jun., we conclude, directs the architectural portions, as in the former cases.

With respect to the general progress of this extension, we have been informed that, so far as can be at present seen, the railway bridge over the Thames will be completed within two months from the present date; and that the line will be opened to the Ludgate station, and ready for the examination of the inspector of railways by the 1st of October next. For the viaduct over Ludgate-hill, the whole of the iron castings are ready; and the fixing of them, it is expected, will not take more than six weeks; while the whole of the clearances northward are in a forward state; so that, no doubt, by the end of the present year, the junction of the line with the Metropolitan for through travelling purposes will be accomplished.

CONTINENTAL BUILDING AND ART NEWS.

Paris.—The very large range of stables for the Imperial stud on the Quai d'Orsay is now completed, and has been fitted up with all the latest improvements. The horses were removed from their old quarters, Rue de Montaigne, last week, and workmen are already employed in clearing the site of the now empty stables.

Nismes.—The new church of Ste. Perpetue at Nismes, built in modern French Gothic style, has just been consecrated with all due solemnity by the Archbishop of Nismes, accompanied by the clergy of his diocese, the archbishops of Genoa and of Avignon, the bishops of Viviers, Valence, Digne, &c. The prelates having taken their places upon an estrade constructed for the occasion, the procession proceeded to fetch the relics of Ste. Perpetue, which had hitherto rested in the Church of the Assumption, and deposited them in the new edifice. The ceremony concluded with speeches by the archbishop of Avignon and others, and the celebration of High Mass.

The Hague.—His Royal Highness Prince Frederick of the Netherlands (brother of the King), to whom the chief committee referred the ultimate selection of the best of two designs for the National Monument, has decided in favour of the set marked "O. V." which proved to be that of Mr. Cuypers, of Roermond, a well-known Dutch architect. The National Monument is intended to commemorate the liberation of the Netherlands from the French yoke in 1813.

Vienna.—The spire of St. Stephen's is being restored and completed. The finial which will surmount it is now temporarily put together, and stands in one of the workshops which surround the cathedral. Some idea will be formed of the size of the spire, when we add that this finial measures 15 feet across.

Cologne.—The "Central Dombau Verein," or Association for Furthering the Completion of the Dom, intend to institute a lottery for the benefit of the church-building fund. They have already obtained the concession and permission of several German states, and expect to organize it in the course of the autumn. There will be eight money prizes, the highest of which will amount to 100,000 thalers, or about 15,000*l.*; and the rest of the prizes will consist of works of art to the amount of 4,500*l.*

Konigsberg.—Kant is to have a statue here. The pedestal is of polished granite, weighing 22 tons, and has lately been fixed in its place. The statue is by Rauch, of Berlin, and is described as worthy of that artist.

Holstein.—The fine old parish church of Plön was destroyed by fire on the 24th ult. The tower was struck by lightning; but it was not until two hours afterwards that the fact became apparent by the flames suddenly bursting out from end to end of the church. In three-quarters of an hour all was over. Luckily the spire, and then the tower, both fell into the church, and not into the street, or the loss of property and life would have been considerable. The church was of the seventeenth century (1690), and was in the non-descript style at that time so much the fashion in Holland.

COMPETITIONS.

Hexham Corn Market.—A competitor asserts that the premium has been awarded to a design set forth in *colours*, though the conditions prescribed sepia.

New Town-hall for Rochdale.—The Rochdale general purposes committee, to whom the designs for a new town-hall were referred, have awarded the premiums as follows, viz.:—First, 100*l.*, to Mr. W. H. Crossland, of Leeds; second, 60*l.*, to Mr. J. W. Best, of Bolton; and the third, 40*l.*, to Mr. J. Maxwell, of Bury; and the town council have adopted the design of Mr. Crossland, conditional on certain alterations of detail, and on the entire cost of the building not exceeding 20,000*l.*

Wyggeston's Hospital.—A report from the architect appointed by the trustees to examine and advise upon the merits of the designs for Wyggeston's Hospital, names "W. within O." for the first place, "Melton" second, and "The Hospital Seal" and "Desideratum" equally for the third place. If the trustees adopt this selection; to the first, by Mr. Ordish, of Queniborough, will be awarded the prize of 50*l.*; to Mr. Giles, of London, and Mr. Gundry, 25*l.*; and to either Messrs. Kirk & Parry, or Mr. Millican, 25*l.*, for the third.

PARLIAMENTARY.

The Metropolitan Railways Bill.—On Monday, Lord Redesdale announced that certain bills relating to metropolitan railways had just come up from the other House, and that it was his intention to move the suspension of the standing orders, in order that those bills should be allowed to proceed, notwithstanding the advanced period of the session.

Mutilation of Ancient Irish Monuments.—On Mr. Gregory inquiring of the Chief Secretary for Ireland whether Government would prosecute the offenders at Clonmacnoise, according to the provisions of the Act 24 & 25 Vic., cap. 39, Sir R. Peel said his hon. friend had made a curious mistake; as the 24 & 25 Vic., cap. 39, was an act for the purification of Brighton. The 24 & 25 Vic., cap. 97, was the Act under which the proceedings in this case would be taken. Whether Government would restore the monuments he was unable to say.

British Museum.—On voting 92,127*l.* for the expenses of the Museum, some conversation took place as to what should be done with respect to increased accommodation, and the Chancellor of the Exchequer said the Commissioner of Works had taken steps to advance the subject by inviting the presentation of a plan, but the time had not come for making any proposal to the House.

SANITARY STATE OF DEBENHAM, SUFFOLK.

It would appear that the road through this town consists in some places of the bed of the river Deben, which, for the greater part of the year is perfectly dry, but at all times is used as a kind of open sewer for a good deal of the drainage. The consequence is seen in the fact that the average mortality of the town, for the ten years ending March last, is 24 in 1,000, whilst in the adjoining parish of Winston it is only 17 in 1,000. Fever has been so rife that in only eight families there were thirty-eight cases and two deaths between Michaelmas and Lady-day last. For some time past, it appears, the Vicar (the Rev. C. J. Cornish) has been doing his best to rouse his parishioners to the necessity for a more efficient system of drainage. After fair warning, he applied to the Home Secretary, and Dr. Bristowe, medical inspector, has visited Debenham. Meantime a committee has been also at length appointed by the Board of Guardians, and it is hoped the sanitary state of Debenham will shortly be improved.

SANITARY PROGRESS IN SHEFFIELD.

THE people of Sheffield and its town council are to be congratulated on the circumstance that the council have at length resolved, by a majority of 36 to 14 votes, to adopt the local government Act for municipal and sanitary purposes. This measure has been carried in the face of much popular clamour, and justifies our investigation, which may have led to it.

PREMIUMS GIVEN BY INSTITUTION OF CIVIL ENGINEERS.

SESSION 1863-64.

THE Council of the Institution of Civil Engineers have awarded the following premiums:—

1. A Telford Medal, and the Manby Premium, in books, to G. H. Phipps, for paper "On the Resistances to Bodies passing through Water."
*2. A Telford Premium, in books, to J. Baldry Redman, for paper "On the East Coast, between the Thames and the Wash Estuaries."
3. A Telford Medal, and a Telford Premium, in books, to W. Lloyd, for "Description of the Santiago and Valparaiso Railway, Chile, South America."
*4. A Telford Premium, in books, to W. Parkes, for "Description of Lighthouses lately erected in the Red Sea."
5. A Telford Medal, to M. Pernolet (of Paris), for paper "On the Means of utilizing the Products of the Distillation of Coal, so as to reduce the Price of Coke, &c."
6. A Watt Medal, and a Telford Premium, in books, to T. Sopwith, junior, for paper "On the Actual State of the Works on the Mont Cenis Tunnel, Victor Emmanuel Railway, and Description of the Machinery employed."
*7. A Watt Medal, to W. Bridges Adams, for paper "On the Impedimental Friction between Wheel Tires and Rails."
8. A Watt medal, to J. Cross, for paper "On the Structure of Locomotive Engines for ascending Steep Inclines."
*9. A Telford Premium, in books, to J. Mortimer Heppel, for paper "On the Closing of Reclamation Banks."
10. A Telford Premium, in books, to G. R. Burnell, for paper "On the Machinery employed in sinking Artesian Wells on the Continent."

* Have previously received Telford Medals.

ARCHITECTURAL ALLIANCE.

THE annual meeting of the Architectural Alliance was held in the Rooms, Conduit-street, Wednesday, July 6, Mr. T. Roger Smith, president, in the chair.

There were present delegates from all the allied societies, viz., the London Architectural Association, Institute of Scottish Architects, Birmingham Architectural Association, Bristol Society of Architects, Glasgow Architectural Society, Liverpool Architectural Society, Manchester Architectural Association, and the Northern Architectural Association.

The Hon. Secretary, Mr. Pritchett, of Darlington, read a report of the proceedings of the past year, detailing what had been done.

The Nottingham Architectural Association was admitted into the Alliance on the recommendation of the London Association.

The alterations in the scale of charges proposed by the various allied societies were discussed, and a scale definitely fixed agreeing almost entirely with the scale published by the Institute, and it was left with the various societies, to add notes respecting any local variations which they might wish, subject to the approval of the Alliance.

A circular drawn up by the hon. secretary, to be sent to the managers of competitions was read, and ordered to be printed for use, after being revised by the officers of the Alliance.

Resolutions were passed, declaring that it is desirable to adopt a uniform system of measurement throughout the country, and that the London system be taken as the basis.

The officers were re-elected for the ensuing year, viz.—Mr. T. Roger Smith, president; Mr. H. C. Chamberlain, vice-president; and Mr. Pritchett, treasurer and hon. secretary.

Some votes of thanks were passed, after which the meeting adjourned to eat the annual dinner.

BRISTOL SOCIETY OF ARCHITECTS.

THE monthly meeting of the council was held at the rooms of the Fine Arts Academy,—Mr. Fripp, the vice-president, in the chair,—on Monday, July 4.

The Rev. R. W. Hautenville, M.A., of Weston in Gordano, Somerset, was elected an amateur member; and Messrs. F. M. Harvey, A. Hazeland, and W. E. Jones, student members.

A committee was appointed to report upon the advisability of publishing a volume of Transactions.

A committee was also appointed, on the motion of Mr. E. W. Godwin, for the purpose of establishing a class, to be called the "Students' Class," at which a course of study would be arranged, and examinations made, to facilitate the students in passing the examinations at the Royal Institute of British Architects.

The discussion upon Mr. Underwood's paper on "Measurement of Artificers' Work," was continued.

It was unanimously resolved, and the delegates to the Architectural Alliance meeting were instructed to support such resolution,—

"That inasmuch as this Society has already adopted the scale of professional charges published by the Institute of British Architects, it has no reason to make any of the alterations proposed by the Alliance, and that any local customs required by local societies should in justice to the profession be placed as notes at the end of the Institute's scale."

THE JUNCTION ROAD OUTFALL AT BRIGHTON.

SINCE a mishap about three weeks since, no attempt was made to float the third length of piping in continuation of this Outfall until Tuesday in last week. On the occasion to which we have referred, the eastern end of the piping did not get clear of the shingle, and the consequence was, that the remainder of the piping was jolted and strained, thus necessitating its removal to its original position at the head of the beach. In consequence of this mishap, repairs had to be made to the joints; and, during the late boisterous weather, the length has been extended on the ways, and fresh appliances laid down. The operations were this time successful. The pipes were left lying in the water till low tide, when they were sunk in the same manner as the previous lengths. Since then the last piece of piping of the Junction-road outfall has been successfully floated out to its place below low-water mark. The sea was rather rough at the time. It was lowered into its resting-place, and its junction effected by the divers. It was 250 feet long, and it carries out the out-fall to the length determined on, namely, 1,760 feet, or the third of a mile; taking its head into the sea considerably beyond the outer platform of the Chain Pier. At present, the outfall lies in the bed dredged for it without any securing; but it is intended to fasten it down with moorings. The contractors for the work were Messrs. Aird & Son: the contract price was 6,800*l.*; and the work was commenced about a year ago. It is believed to be a unique work of its kind, no piping having before been laid in the sea to such an extent beyond low-water mark.

BRICKMAKING MACHINE.

A NEW machine, patented by Messrs. Bawden & Co., Clifton-street, Notting-hill, is at full work in the brickfields of Messrs. J. & S. Williams, Richardson, & Co., at Shepherd's Bush, producing hard bricks, good in form and surface. From the simplicity and strength of the mechanism, it is not liable to get out of order, nor to be clogged by clay; and it may be managed with effect by any ordinary workman in two hours' practice. The machine, throwing off from 1,200 to 1,400 bricks per hour, is about the size of an ordinary pug-mill, standing on wheels upon a frame, under a box about 4 feet square, by 6 feet high, in the centre whereof a vertical iron shaft, armed with blades, on the Archimedian-screw principle, is turned by horse-power, mixing and thoroughly kneading the clay, which is thrown in at the top, and delivered at the base, in moulds of bricks complete: these are rapidly emptied on trays, laid on a turntable, and are then successively wheeled away to the drying stacks. The machine occupies but a small space, close to the heap of prepared material; and it is stated that, owing to the complete process of mixing, kneading, and compressing, almost any sort of earth, with a modicum of clay, will turn out excellent bricks.

Bawden's machines were first used in Canada, and furnished supplies to all the growing cities there. At the Exhibition at Montreal, inaugurated by H.R.H. the Prince of Wales in 1860, it obtained the first prize, the bricks for the Parliament buildings in Ottawa having been also made by it; and these machines are now at work in several of the counties of England.

DEATH IN THE REGENT'S CANAL.

THOSE who live close to the banks of the Regent's Canal, especially in the populous districts of St. Pancras and Islington, get somewhat accustomed to sorry sights, for the number of children and others who lose their lives here in the extent of two miles is remarkable. In a great measure this loss of life is caused by the want of attention to the fences which should be provided to prevent children from getting into danger, and the want of a watchman who would stop the occupation of the towing-paths by those whose lives are not safe in such situations. For instance, to the east of Thornhill Bridge, Caledonian-road, there is an infant school, and another school in which a very large number of children assemble. On one side of the canal at this point a steep bank leads to the water. Here there is nothing to prevent the children from placing themselves in great risk. At other parts the railings are broken, and are allowed to remain so for months together; and so by this, and in consequence of the want of a person to keep the way clear, boys and girls are constantly falling in, and many have endangered their lives in the attempt to rescue them. This is a subject which we recommend to the notice of the jury and the coroner at the inquest which may be held on the next sufferer; for the canal companies should be as much bound to prevent loss of life when their property stretches through dense populations as are the railway companies.

In the course of last week, Dr. Lankester held an inquest at the City of York, York-road, King's Cross, on the body of Edward Summers, seven years of age. The deceased and his brother were playing on the banks of the Regent's Canal, when the deceased's hoop rolled into the water. Deceased endeavoured to recover it, and fell in, pulling his brother into the water with him. George Waite, who was at work at Humphries's wood yard, heard that two children were in the water, took off his clothes and jumped in after

them. He dived, and brought up the body of the deceased. Isaac Featherstone, who works at the same place, brought up the body of the one who was saved; this being the *seventh* life he has saved near this spot. The writer, having for some time lived near this dangerous locality, has had many opportunities of noticing the bravery and intrepidity of these two lads, who, even in the depths of winter, rush eagerly to the rescue of life. Before the drags could be got from the station, they have been into the water, diving like otters, in search of lost bodies; and this they seem to do gladly, without fee or reward: but surely such praiseworthy conduct should not pass unheeded. We should be glad to hear that these few lines have been the means of bringing the matter under the notice of some who may help them upwards in life.

LONDON STREET NOMENCLATURE.

WE have on various occasions expressed our anxiety lest the Metropolitan Board of Works, in their well-meant endeavours to abolish arbitrary divisions, get rid of repetitions, and reform the irregular numbering of houses, should destroy the interesting associations and suggestiveness of our streets. This fear is by no means lessened, and has been recently expressed by several correspondents. We adopt part of the letter of one of the most recent of them:—I desire to protest against the improper use, as I consider it, of this power, when exercised in making unnecessary innovation on the old-established and time-honoured local associations, and probably suggested at the whim of private individuals. Let me allude to a notorious instance of vicious taste (perpetrated, however, before the Local Management Act of 1855), where a foolish builder was allowed to destroy the historical associations connected with "Battle Bridge," for which was substituted the term "King's-cross," meaning nothing more than a wretched brick and plaster attempt at a statue of the then king, so absurd in character and execution, that its subsequent removal as a nuisance was hailed by acclamation. The disreputable name remains to this day, under the sanction of the Metropolitan Board of Works, who have recently extended the "King's-cross" line of road into Clerkenwell, when they could as easily have restored "Battle Bridge," on whose reminiscences a volume might be written. But my main object just now is not so much with past doings, but with what is now undergoing discussion in the parish of Islington, where it is proposed to substitute, at the instigation of a few shopkeepers, the name "Essex-road," for the present "Lower-road." To say nothing of the absurdity of a designation having only a very indirect relation at all with Essex, the Central Board seems likely to sanction the removal of our oldest landmark, with its Elizabethan mementos, and associations coeval with the parish itself. Where is this senseless kind of proceeding to stop, unless the Board exerts its undoubted authority in such cases? for the outcry raised is likely to be disregarded, and all that remains is to call public attention to what seems to be a dereliction or at least a misconception of duty. A rumour is afloat, though it appears scarcely credible, that the Board of Works, influenced by a desire to abolish duplicate names, will not tolerate a *Lower-road* at Deptford and another at Islington!

PROPERTY IN BRADFORD.

ARBITRATION.

ON the 29th ult. the first of a series of arbitration cases, in respect of property scheduled for town improvements, was opened in the saloon of St. George's Hall, before Mr. Picton, of Liverpool, umpire; Mr. Lockwood, arbitrator for the Town Council; and Mr. James Bancroft, arbitrator for the trustees of the late Mr. J. M. Atkinson. The property which was the subject of inquiry is what was known as the Old Foundry property—a large block of old property situate in the line of the proposed extension of Market-street from Bridge-street and Manchester-road.

Mr. Lloyd, in opening the case for the trustees, said that the property about to be arbitrated upon was one of great interest and value. The question was, what was its fair value? Its area was 4,043 square yards; and, looking at its site, it would be difficult to exaggerate its value. The average yearly rental for the last five years was only 400*l.*; but in its present condition the property was a manifest anachronism, a relic of the past amidst valuable modern property. He therefore discarded the rental as a basis of calculation, and contended that the proper way to estimate the value of the area of 4,043 square yards, was to find what would be its worth per yard if the buildings were swept away and the land sold in building blocks. His witnesses would tell them that at the lowest estimate the ground for building purposes would be worth 6*l.* per yard. The learned gentleman showed that, by every usual mode of valuing, the same total estimate for the entire block would be arrived at, namely, 25,000*l.* It was his opinion that the Town Council would recoup themselves by the resale of the large portion of the site not required for the street. Only 966 yards were wanted for the street. The new thoroughfare would give excellent frontage to the part to be resold for building purposes.

Mr. George Knowles, architect and surveyor in Bradford.—The proper mode of dealing with it in order to obtain the best price for it would be to clear the ground, as it is not now in its most productive state. In conjunction with Mr. Andrews and Mr. Dixon I have laid out a scheme with the view of arriving at the value of the property, and I now show through the centre of the plan a street from Market-street to Chapel-yard 12 yards wide. Chapel-lane is 8 yards wide, and I have made it lineable, and also Toad-lane, and thus would make a sacrifice, by widening those places, of 1,376 square yards. The available property for building would then be 2,238 square yards, with 376 square yards for carrits or yards. The value of the land thus worked out I estimate would be 5*l.* 12*s.* per square yard upon the whole area, and not upon the net area. Upon the whole area the average value is 5*l.* 12*s.* per square yard according to the method applied, which would be 22,675*l.*, to which add 20 per cent. for improveable value, and the sum is 27,210*l.* Allowing for deferred value when the property is setting during two years at 4 per cent. 2,052*l.*, and the sum is reduced to 25,158*l.* This is, I think, a very fair and reasonable valuation, and facts are within my own knowledge to justify such valuations.

Mr. Thomas Dixon, land surveyor.—I think, taking all the plots together, that 5*l.* 12*s.* per yard would be a fair price for it. I have no doubt that it would realize all that I have put upon it. With discount, the cost of the land would be 25,158*l.*

Mr. Wm. Andrews, architect, said:—I went over the calculations with Mr. Dixon and Mr. Knowles, and agree with their figures, and think that the rental is not extravagantly high. I agree in the 20 per cent. mentioned in consequence of what has been called the compulsory rate, or improving value.

Mr. Thomas Newsam, land surveyor, Leeds, said:—My opinion is that the ground in question is worth 6*l.* 6*s.* per square yard, for either buyer or seller. Property is not so valuable in Leeds as in Bradford. What I think worth 6*l.* 6*s.* here would not bring more than 4*l.* in Leeds. I make the value of the property to be 20,471*l.*, and that without the 20 per cent.

Mr. C. E. Cawley, Manchester.—I think the estimated cost of the proposed buildings very moderate. The cost which I think ought to be paid for it is 23,217*l.* 10*s.*, to which I would add 10 per cent., making a total of 25,500*l.*

The case for the Corporation was opened on the following day.

THE INCISED ROCK SYMBOLS IN NORTHUMBERLAND.

SIR,—The single illustration given by Mr. Dove of these singular relics is not sufficiently typical to have enabled him to come to a correct conclusion as to their origin or use. The most general form is that of three or four concentric circles with but one outlet from the centre: this fact quite upsets his theory.

Nor is the statement correct that these stones have been recently discovered. In 1852, the Rev. W. Greenwell gave a description of the rocks first discovered to the Congress of the British Association at Newcastle; and, in October of the same year, Mr. George Tate, secretary of the Berwickshire Naturalists' Club, gave the members an elaborate account of them. On that occasion a drawing was furnished of the most important one, at Routing Linn, by the Rector of Ford. Mr. Tate has also laid the subject before the Society of Scottish Antiquaries. I have made a drawing of the groups of figures on the curious scalp at Routing Lynn, and can testify that there are configurations there that would bear no such explanation as that given by your accomplished correspondent. As at Doddington and Bewick, there are concentric incisions of horse-shoe forms, with but one outlet; others arranged in a branch-like manner; and still more of circles attached to others of different dimensions.

This is a subject that cannot be disposed of at first sight. The rocks are situate on the most exposed situations on the bleak hills and moors of this county adjacent to, but not, as reported, *upon* the Cheviots; and consequently can only be visited for purposes of study in fair weather in the summer months. On a cloudy or wet day many of the slightly incised marks might be overlooked; and, as they lie in various places of several miles' distance from each other, their examination is a work involving the lapse and labour of several of our short seasons of summer. Mr. Tate has bestowed his care upon the subject, and is about to present the result in a comprehensive and exhaustive paper.

F. R. WILSON.

IN Mr. Wilson's communication, which you have been good enough to refer to me for my remarks, he himself speaks of "*three or* four concentric circles," with one "outlet," as sufficiently *typical* of "the most general form" of the rock symbols. It was precisely because it is so in the somewhat more essential respect of threefoldness (and for economical reasons as well) that I gave the three-circled illustration only. As to the also variable contingency of "but one outlet from the centre,"—notwithstanding what Mr. Wilson says, that does not and cannot in the slightest degree even affect my "theory," far less "quite upset" it; and Mr. Wilson must be labouring under some singular misapprehension on the subject. Although I have chosen an illustration with two "outlets from the centre," as Mr. Wilson calls them (why not *inlets to* the centre, and why not branch or stick shapes *pointing* to the centre?) merely because it happened a little more closely to resemble a symbol of my own; nevertheless I have myself drawn special attention to the circumstance that "a *single* rough branch- or root-form, forked at the outer circle, and POINTED *at the central depression*," also occurs; and have even said that the frequent occurrence of a single circle and central point (without *any* "outlet" or "inlet" at all, be it noted), and even of the central point without any *circle*,—far less any "*outlet*,"—seems to have been intended,—together "with the pointing of branched and other stick shapes ('outlets' or inlets) always towards the centres of the concentric circles,"—to "fix the attention, above all, upon the central point." And, indeed, one pointer more clearly harmonizes with this theory than two. How, then, can my theory be "quite upset" by the mere circumstance that the illustration I gave happens to have *two* such pointers instead of only one, in order to direct the attention to the centre? I have myself even also noted that sometimes a *single* branch or root shape is "hooked, like a bishop's staff, round the centre." If what I have called the branch or stick shapes pointing to the centre, and what Mr. Wilson calls the outlets from the centre, were really intended, like the centre *per se*, and the centre and single circle without any pointer, to fix the attention upon the centre (which is what Mr. Wilson must here mean by my "theory"), what *can* it signify to that theory how many or how few of these pointers there are in any one particular symbol? There might be twenty just as there is often only one, without in the least affecting the verisimilitude of the idea. The pointers do vary, and even so do the circles, in number; *but the one essential point,—the centre,—never varies, and is never awanting.* Every variation, however, may have a symbolical meaning. Thus, nine circles, which do occur, may denote the threefold *subdivision* of the threefold *division* of the mind into positive, comparative, and superlative regions.

Mr. Wilson is quite mistaken (as must be evident) in his supposition that because I have for economical reasons given merely one illustration, I must have therefore come to my conclusion as to the origin or use of such symbols from a consideration of that one illustration alone.

Of course, by the word "theory," Mr. Wilson does not and cannot allude to my psychological theory, which is not based on rock or any other symbols at all, but on psychological principles,—explanative of many symbols certainly, but neither derived from them nor in any way dependent on them, nor capable of being "upset" by them, or by any possible explanation of them, or of any class or section of them.

That other forms of the rock symbols are explainable *on the very same psychological principles* I have not the least doubt; but my restricted purpose was to deal with the more general forms of the *circular* symbols alone; and in carrying out that purpose I chose what appears, from Mr. Wilson's own showing, to be essentially "the most general form" of such symbols, in spite of "one outlet" being more general than two or any other number. I am persuaded, however, as I have already indicated, that the stick or branch forms have also in themselves had a

mbolical meaning, connected, like the circles, ith the concentrative and radiative principles of e; and, although two such branch forms might enote both, so might one, considered both as a ot and as a branch, on the arterial and venous ea already explained in one of my letters on eometrical Symbols.

Of the wavy and other angular symbols I ave also already offered explanations quite nsistent with my psychological theory, but aving nothing immediately to do with centres circles; and as to the horse-shoe-and-ntre form, that is a mere modification of the ntralizing idea, and no more affects it than the king away of all but the root and branch with ossing *segments* of the concentric circles, in y own symbol, as given in my last letter, ould have affected *its* meaning. *The possible mbolical modifications of one and the same lea are endless.* I before gave the concentro-adiative tree-form, it may be remembered, ithout any circles at all, but still with one nd the same concentro-radiative meaning. he branch-like symbols and the double ones re quite explainable on my views as well as ne others.

I need only further remark, that, although cer-in of the rock symbols may have been long nown, others appear to have been of recent dis-overy, and to have thus called attention to them enerally. To the fact, however, that the concen-ric circled symbol was to be found among the ng-known Irish sorcery hall symbols, and that ne single circle and centre, of the rock symbols, as also otherwise widely spread and well known, called the special attention of your readers in y letter.

It may or may not be unfortunate for Mr. ate that I have preceded him; but Mr. Wilson ould have given my letter a little more con-ideration before attempting to clear the way for im by so futile an endeavour to "upset" and xtinguish my little "theory" as to the circular ock symbols. J. E. D.

THE LONDON HOMES OF EMINENT MEN.

A CORRESPONDENT writes,—I am glad to notice hat you pursue the idea which you have on everal occasions urged in the *Builder*, to mark n a permanent manner the houses in which ur greatest men have lived, and where they ave performed important works, and received onoured contemporaries. The value of such a tep would be great in our own, but far more so n future generations, and it would be the means f saving many a relic which will otherwise e ruthlessly swept away.

The task of doing this would be an easy one, nd not attended with any great expense; but hat seems to be wanted is the practical super-ision of persons who, feeling interest in the novement, would prevail on the proprietors of remises to place some mark for their identity. ome would not go to the expense themselves, ut would have no objection to have it done by thers. It is therefore needful that some funds hould be provided to meet these emergencies; nd it seems very desirable that we should have society formed of those who are interested in he subject, which might be the means of direct-ng the public attention to places which require are. By this means there can be little doubt ubscriptions sufficient for the purpose would ow in. In these days we cannot hope for any-hing to be done in this way by the Board of Works, nor by the parish Boards; and there is ut small hope from the City corporation; but urely if this business were brought to the otice of one of the Archæological Societies, or f the Antiquarian Society, we should soon ave a useful body of workers, who would see hat London was not behind Paris in doing onour to its worthies.

A LONDON ANTIQUARY.

*** The Society of Arts would be a very roper body to undertake the work.

CLERGYMEN'S CLUB.—A company has issued a rospectus for the erection of a club and hotel or clergymen in London. The capital is placed t 100,000*l.*, in 10,000 shares of 10*l.* each; the eposit being 1*l.* per share on application, and 1*l.* n allotment. In addition to the club and hotel is proposed to provide a common hall or cham-er for meetings, and rooms for church institu-ions or societies as offices. The directors are in reaty for a suitable site in the neighbourhood of Charing-cross.

THE METROPOLITAN BOARD OF WORKS.

At the meeting of the Board, on Friday, the 8th, at the offices, in Spring-gardens, the chairman, Mr. J. Thwaites, presiding; a correspondence, which had passed between the officers of the Board, the Thames Conservators, and the Office of Works, relative to the filling-in of the Chelsea Embankment; was read, and it appeared from it that the Thames Conservators complained that, instead of the contractors who were carrying out the Embankment using material dredged from the river, as ordered by the Legislature, they were filling in with rubbish obtained from other sources. The chairman stated that the contractors had taken all the material supplied by the conservators; and that if the fillings-in were to be all taken from the bed of the river, the works would not be completed in double the time allowed.

The chief engineer (Mr. Bazalgette) presented his annual statement of the works carried out and in course of formation under the Board. He informed the Board that the works had continued during the year without any material interruption, and that a large amount of tunnelling had been completed on the south side of the river under canals, railways, and large buildings, and through treacherous soil filled with water, with but few casualties. Many of the large sewers had now been completed, and on the north side of the river 14,000,000 gallons of sewage were discharged at Barking, and on the south side 12,000,000 gallons discharged at Crossness, being, on the whole, 26,000,000 gallons of sewage now discharged into the river far out of the metropolitan limits, at such a turn of the tide as to carry the obnoxious fluid seawards. This quantity is one-third of the whole metropolitan sewage. The following works were reported as completed at the cost attached to each:—Northern High-level Sewer, 9 miles in length, 203,816*l.* 7*s.* 9*d.*; Northern Outfall Sewer, 5½ miles of double and treble lines of sewers, 643,000*l.*; Middle-level Sewer, 12 miles in length, about 314,000*l.* (completed, with the exception of the aqueduct, across the Metropolitan Railway at Farringdon-road); Northern Outfall Reservoir, for the storage of sewage, 166,000*l.*; Southern High-level Sewer, rather more than 9½ miles in length, 215,299*l.* 1*s.* 5*d.*; Bermondsey Branch Sewers, 96,000*l.*; and Southern Outfall Sewer (exclusive of land purchased by the Board), 310,618*l.* 2*s.* 6*d.* With respect to the Thames Embankment, the value of the work done, materials, &c., on the first contract (between Westminster and Waterloo Bridges), was about 37,000*l.*; and on the second (from the east side of Waterloo Bridge to the Temple Gardens) about 18,000*l.* He also reported that the drawings and specifications for the Southern Thames Embankment (from Westminster Bridge to Vauxhall) would be ready for tender in October next. The report was referred to the Main Drainage Committee.

FALL OF A WALL AT KENTISH TOWN.

THE flank wall of a small house on the Conservative Land Society's estate, Maiden-lane, Kentish-town, of recent erection but undergoing demolition in consequence of the contemplated works for the Hampstead and Tottenham Junction Railway, fell, or was forced down by the wind, on Monday last, under peculiar circumstances, resulting in the instant and lamentable death of one man, and the very serious injury of another. The building was two stories in height, and the wall which fell was about 26 feet long, 16 feet high, and one brick thick. All the return walls, cross partitions, joists, and every matter which would have constituted a support or strut had been removed by the men on their own responsibility. It should be noted, that the woodwork had been purchased by one party and the brickwork by another, hence a divided interest in the management of the clearance, which appears to have resulted in the too early removal of the abutments which would have prevented the catastrophe.

The coroner's inquest, after a careful investigation of the facts, returned a verdict of "Death from accidental causes;" but in the course of the inquiry Dr. Lankester remarked that the evidence laid before the jury seemed to indicate in this case, as in most others, the absence of caution on the part of the workmen themselves, who incur voluntarily unnecessary risks, where their employers would have a very strong hesitation in ordering them into such situations. The evidence in this case proved that these men had several warnings from a bystander of the trembling condition of the wall, but without making any impression on them.

INJUNCTION: COTTER *v.* THE METROPOLITAN RAILWAY COMPANY.

BEFORE Vice-Chancellor Sir R. J. Kindersley, an injunction has been obtained to restrain the Metropolitan Railway Company from entering and taking possession of a house, No. 20, Lower Whitecross-street, which the plaintiff held under a lease. The plaintiff claimed 3,650*l.* for purchase-money and compensation, and a bond was given in the ordinary form, except that after the words, "If the (obligor) shall pay into court," &c., were inserted the words "at any time hereafter," and at the same time the company threatened to take possession on the 7th of July.

The Vice-Chancellor was of opinion that no proper valuation had been made: it was necessary for that purpose that a house should be inspected internally. The objection as to the words inserted into the bond was fatal, not deciding whether an action would lie or not: it was a departure from the terms of the Act of Parliament. His honour adhered to the opinion he had expressed in "Gibson *v.* The Hammersmith Railway Company," and there must be a restraining order for the injunction until a proper valuation was made, as required by the 85th section, the amount paid into court, or the jury had given their verdict, with liberty to apply.

LONDON BELFRIES AND RINGERS.—The "Beadle and Steeple-keeper of St. Mary-le-bow," E. Watts, is not contented with Mr. Morris's account of his stairs and ringing-room. He says "the college ringers have rung at the church from the year 1850, and during this period I have not had a call made for a clothes-brush." We are glad to hear it.

COMPENSATION CASES.

THE THAMES EMBANKMENT.

At the Sheriffs' Court, Red Lion-square, last week, the case *Gwynne* v. *The Metropolitan Board of Works* occupied the court for five days. It was the first contested claim. Mr. Lloyd and Mr. Horace Lloyd were for the claimant; and Mr. Lush, Q.C., Mr. Karslake, Q.C., and Mr. Raymond represented the Board of Works. The claim exceeded 30,000*l.*, and the principal question was whether Mr. Gwynne, who is an hydraulic and mechanical engineer at the bottom of Essex-street, by the Temple-pier, was entitled to compensation for being deprived of the water of the Thames, which was necessary to carry on his works. Last year his net profits exceeded 10,000*l.* He had taken new premises at Battersea, for which he paid 7,000*l.* The Board of Works did not require the premises for the embankment, and a roadway was now being formed, and which would, it was stated, be much better for the claimant. On his behalf it was, however, urged that waterside premises were essential to him, and to enable him to test the pumps made for foreign Governments. On both sides numerous witnesses were called. The design of the embankment was exhibited in court, and some of the witnesses were of opinion that property in the neighbourhood would be increased in value by the improvements in contemplation. On the part of Mr. Gwynne, a substantial compensation was claimed, and the several items were placed before the jury. Mr. Lush, Q.C., complained of the "monstrous" claim which he said had been made, and called witnesses to disprove some of the allegations advanced. It was impossible to exaggerate the importance to the public of the case now under consideration. The compensation would come out of the public money in the shape of rates. Mr. Lloyd admitted the importance of the case, and complained of the conduct pursued by those in authority, which had been shown in the matter. Mr. C. Pollock, the assessor, summed up the evidence extending over the several days, and laid down the law on the subject. The claimant was entitled to full and fair compensation. The jury retired at nearly five o'clock, and after a consultation of an hour and a half they returned into court, giving a verdict for 14,000*l.*

THE BUILDING TRADES MOVEMENT.

Swansea.—Most of the operative joiners and carpenters struck work for an indiscriminate rise of 3*s.* a week, or from 21*s.* to 24. A meeting of master builders and workmen took place, when the masters offered to give the rise from the 1st of April next, advancing 1*s.* of it in the mean time. These terms seemed to be favourably received; but at an evening meeting of the men the offer was refused, and most of them struck work. Various employers have since, according to the *Cambrian*, agreed to give the 6*d.* a day required, and others have offered 4*d.* a day, or 2*s.* a week. What the masters chiefly complain of is the demand for an immediate advance.

Wolverhampton.—After a six weeks' strike and part lock-out, building operations have recommenced in Wolverhampton. The bricklayers mediated between the labourers and the master builders, and got the men to withdraw the notice for an advance of wages, on the ground that they ought to have given a three months' notice, and not a fortnight's notice; and the masters have withdrawn the lock-out. Afterwards the masters gave the labourers an advance of 1*s.* per week all the year round, to make 18*s.* in the summer and 16*s.* in the winter; but they refused to make the wages in the winter equal with those in the summer, which the men at first required.

Coventry.—The strike here is said to be virtually at an end. Most of the labourers have resumed work, many of them at the old rate of wages.

Manchester.—The carpenters demand 2*s.* a week more wages, which the masters refuse to give.

Sheffield.—The joiners' strike has been settled on the terms offered by the masters at the time of our last notice.

Leeds.—A rather numerous meeting of operative carpenters and joiners has been held at the bazaar, in consequence of an alleged violation by the employers of an understanding which was come to five or six weeks ago, that all men should be paid punctually at 12·30 on Saturdays, unless paid at 5·30 on Friday evenings; and a resolution was passed, recommending all the men to present themselves for payment at 12·30

precisely, and that if the employers objected to it, a meeting between the masters and men's deputations should be sought for. If that should fail to accomplish the object, then the men were to give six months' notice for an alteration of the existing rules, and also 2s. advance in the weekly wages.

Middleton.—The operative painters of Middleton have held several meetings, for the purpose of appointing a deputation to wait upon the masters for an increase of wages from 24s to 26s. per week, and, if this be not acceded to, the men declare they will cease working. One of the masters has granted their request.

SCOTLAND.

Pitcairn Monument, Colinton, near Edinburgh. A rural monument attached to the estate of Dreghorn, and erected in memory of David Pitcairn, of Dreghorn, an ancestor of Principal Robertson, the historian, and other public personages, has been repaired at the cost of several of his descendants, including the Earl of Minto, Baroness Dunfermline, Countess Russell, and others. The restoration was conducted by Mr. John Nicol, of Edinburgh, architect; while Mr. Wilkie, of Juniper-green, executed the masonwork; and the brass plate was engraved by Mr. R. Nicol, Edinburgh. The property is attached to the estate at Dreghorn, of which Mr. R. A. Macfie, of Liverpool, is proprietor. That gentleman, however, waived his rights, and encouraged the restoration of the fabric.

Dumbarton.—The new free church in High-street, Dumbarton, erected from designs by Mr. John Honeyman, jun., of Glasgow, architect, has recently been completed and opened for public worship. The plan of the church, the foundation-stone of which was laid on the 13th July, 1863, by Provost M'Ausland, is a simple parallelogram, about 70 feet long by 50 feet wide, arranged in the usual way, with galleries at the sides and end, the pillars supporting the galleries being continued up to support the roof also. The ceiling (which is plastered) is considerably higher over the centre aisle than at the sides, and a line of timber panelling at each side of the centre ceiling affords means of ventilation. The gallery front is of timber, panelled. The pews give sittings for about 850 persons. The principal front of the church is towards High-street, and the tower is introduced at one corner and the staircase at the other. The spire, which is at the corner of High-street and Brewery-lane, is 145 feet high, and is a prominent feature in every view of Dumbarton. The style of architecture is Early English, similar in character to what is seen in the older parts of Lincoln Cathedral. Over the entrance-door, which has a trefoil head, are three lancet windows, the mullions of which are enriched with detached clustered shafts of black Carnock stone, having carved capitals. Above these an enriched band-course crosses the gable, and also encircles the tower, and over that in the gable is another small triplet window. The mouldings of the skew, and many other mouldings, are enriched with dog-tooth ornament. At the south end of the church, and entering from Brewery-lane, is a large hall, which will be used for the meetings of the Presbytery. Adjoining this are the vestry, session-house, waiting-rooms, &c. The church is heated by means of hot-water pipes. The gasfittings consist of bronzed brackets below the galleries, and two bronzed star-lights of twenty-four burners each, light the galleries and body of the church. The cost of the buildings and fittings will be about 5,000*l.* The contractor for the masonwork was Mr. A. Coghill; for wrightwork, Mr. J. Connell, both of Glasgow. The plumber was Mr. W. Reid, Glasgow; the slater, the late Mr. Ferguson, Dumbarton; and the plasterer, Mr. Hutcheson, Dumbarton; the gas mains being supplied by Mr. Colvill, Dumbarton; and the other gasfittings by Mr. G. Mathieson, Glasgow. The clerk of works was Mr. W. Kent.

DISSENTING CHURCH-BUILDING NEWS.

Brightlingsea (Essex).—The memorial stone of a new congregational chapel has been laid at Brightlingsea. The building is designed in the early English period of Gothic architecture, and is to be erected with red bricks laid close with a dark mortar joint, strengthened by buttresses at intervals, formed with white Suffolk bricks and water-tables of Bath stone. The porch entrances, in principal gable, are to have solid stone jambs with columns, and a three-light stone window will be placed in the gable. The windows on each side of the chapel are also to be of stone, and the heads of the doors and windows will be relieved by arches formed with party-coloured bricks. The corbels to gable and the coping will also be stone, and the apex will be surmounted by a carved cross. The roof will be covered with slates, with ornamental ridge crest. The windows will be glazed with quarry glass in front, and tinted fluted glass at the sides, and ventilation is provided for by Hopper casements, with air gratings under the floors. The roof will be open to the interior of the chapel and the principal timbers will be wrought, moulded, and stained. The chapel will be fitted with open benches or stalls. A schoolroom and vestry are provided at the back of the chapel. The whole of the works are to be erected by Messrs. Lake & Gull, of Brightlingsea, builders, for the sum of 600*l.*, under the superintendence of the architect, Mr. Horace Darken, of Colchester.

Bedford.—The foundation-stone of a new Moravian chapel has been laid here, on the site of the old building at St. Peter's green. The plans and specifications have been prepared by Mr. Horsford, of Bedford, architect, and the contractors are Messrs. James Francis & Son. Roman is the style of architectture selected. The building is to be of brick, with stone quoins and window frames. The estimated cost is about 1,500*l.*——The architect of the proposed new Wesleyan chapel, Mr. Palgrave, of Pall Mall, having completed the plans of this building, tenders for its erection were called for, and have been delivered as under:—

For the erection of the chapel and school:—			
Mr. C. Day	£3,121	0	6
Mr. G. Bryant	3,142	11	6
Mr. S. Joy	3,249	0	0
For the tower:—			
Mr. G. Bryant	390	0	0
Mr. S. Joy	437	0	0
Mr. C. Day	483	12	6

Bisley (Gloucestershire).—The Wesleyan chapel just erected at Bisley has been opened. The building is a small Gothic structure, and has cost upwards of 400*l.* Most of the money has been raised.

CHURCH-BUILDING NEWS.

Boultham (Lincolnshire).—The chancel of Boultham Church is now being rebuilt, at the expense of Colonel Ellison, and, so far as it is executed, exhibits an improvement upon the old barn-like structure, erected only about a century ago. It is intended to complete the work by restoring the nave. In pulling down the old walls a carved stone of Norman architecture was discovered. It evidently at one time formed part of a large archway. The works are being executed by Messrs. Barker & Smith, under Mr. Drury's superintendence.

Earls Colne (Essex).—The parish church of Earls Colne has been re-opened, after having been closed for fifteen or sixteen months for repairs, which have been executed under the superintendence of Mr. Hayward, of Colchester, architect, at a cost of upwards of 3,000*l.* The contract for the works was taken by village tradesmen—Messrs. Rogers, Clark, and Cawston, and Mr. Bremer, of Colchester. The improvements include a new north aisle, corresponding with the southern portion of the church; the chancel renewed; the roof of the building laid open, stained, and varnished; and stained open benches substituted for the old pews.

Hertford.—At a meeting of the committee appointed to carry out the resolution of the vestry relative to the re-pewing of All Saints' Church, the secretary produced the plans sent in by Mr. T. Smith, who explained them. Mr. Smith proposed to re-pew the whole of the nave and chancel, and the transept, with open seats; and he had also included in his plan a new transept. The re-pewing would add 109 seats, and the proposed new transept 93, or an increase of 202 seats, so that the church, as proposed to be altered, would accommodate 780 adults. Mr. Smith's estimate of the cost of the alteration was as follows:—

Repewing old church, new floor and tiles	£600
Additional transept, with three new stone windows, iron columns, and extra seating	450
Heating the church	160
Extra tiles for chancel floor	20
	£1,230

It was agreed to adopt the plans, with the exception of the transept, the omission of which reduced the estimated expenditure to 780*l.*

Northampton.—It has been resolved by the vestry of All Saints' to repair the church, and a committee has been appointed. Mr. Law, architect, has reported as to what is requisite; the summary being—

For general external restorations	£632
Inside restorations and decorations	510
Altering seats on ground floor	200
New gas burners as suggested, 54 in number	110
New windows throughout, including glazing, and painting, and fixing, with ground glass on south side, and 19 casements	328
Total estimate	£1,775

If the organ chamber is erected add the sum of £500

Weedon.—The restoration of the church chancel, which has been some time in progress, is at length completed, and the chancel opened. The chancel arch, which is in the Early English style, is higher and wider than the old one, extending to the roof. The doorway and south window are in the same style. The window is of stained glass. The east window is also of stained glass. In the centre is the "Good Shepherd," presented to the vicar by Mr. Powell, of London, who supplied the windows. The architect was Mr. E. F. Law, of Northampton; the builder, Mr. E. Roberts, of Weedon. The stone carving was the work of Mr. White, who also executed the carving of the new town-hall, Northampton.

Oxford. The reparation of the south-west porch of St. Mary's Church, which has long been a subject of discussion, and for which a vote was granted last year by convocation, on the advice of Mr. G. G. Scott, has just been commenced. It is intended to saturate the stone, where practicable, with an indurating solution, and then to insert new material in the most decayed places, by which means it is hoped this interesting relic may be preserved. The unsightly south wall of the churchyard has also been taken down, and is being replaced by a low and ornamental erection.

Buckingham.—The Church of All Saints at Milton Keynes has been reopened by the Bishop of Oxford, after restoration. The restoration has been carried out by Mr. Street. The church is in the Decorated style. New roofs have been put on the nave and chancel, and carried up to the old pitch. The whole of the interior is fitted with open benches, and oak stalls in the chancel. The pavement is formed of encaustic tiles.

Old Windsor.—St. Peter's Church, Old Windsor, has been re-opened for divine service, after undergoing a restoration and renovation by Mr. Scott. Exteriorly its aspect is considerably altered: the new south porch is a feature on one side, and a north chancel aisle has been added on the other. Within all has been changed: the square boxes have been, of course, pulled down, together with the gallery, and the whole area has been fitted with open seats, to accommodate about 460 persons, and of these we understand something like two-thirds are to be free. The whole of the woodwork, including the roof, is of solid English oak, and the expense, including everything, has been about 2,800*l.* Of this the greater part has been raised by subscription, the roof alone having been put on at the expense of the church-rate. Among the features of the new chancel aisle we may mention a stained glass memorial window, by Messrs. O'Connor. In the left-hand base compartment is represented the Finding of Moses, and in the right Samuel and Eli. Above, in the left compartment, is the Holy Family, and in the right are Timothy and his Mother. In the extreme top of the window is a representation of Our Saviour blessing little children. It is intended, also, to fill in the east windows with stained glass,—the gift of a friend whose name is not, we understand, made public. In the new chancel aisle is also a mural brass, put up in memory of the same family as the window. The design of the organ-case was by Mr. Scott, and is Gothic, the front pipes of Mr. Walker's spotted metal. The whole cost of the instrument is about 250 guineas.

Walsden. The church of St. Peter, which is situate in the Todmorden valley, at Walsden, has remained for some considerable time destitute of a spire. A special effort has been made by the Masonic body in the division to supply the deficiency, and the result of their appeal is the dedication of the newly-completed spire. The cost of finishing the spire is 300*l.* The architect was Mr. James Green, of Portsmouth, near Todmorden. Upon the tower is placed a "level," as a weather-vane, it having been considered appropriate, both as a Masonic emblem, and to surmount a building consecrated to divine worship.

Miscellanea.

Wilts County Surveyorship. — Mr. Henry Beaver, of Devizes, has been appointed to this office by a large majority of votes.

Schools of Art.—The Southampton School has had a national medallion awarded to it; the Brighton School four national medallions; and the Ipswich School one national medallion. Of course other medals and prizes have also been won by all three.

The Gloucester Surveyorship.—We understand that five of the candidates for the office of surveyor and chamberlain of this city were selected to have an interview with the Board of Wealth prior to the election. The candidates selected were Mr. Richardson, Barnsley; Mr. Moss, London; Mr. Fowler, Leeds; Mr. Jewett, Manchester; and Mr. Colbran, Burnley.

Mr. and Mrs. Alfred Wigan.—On Wednesday afternoon, in the presence of a fashionable assembly, Mr. and Mrs. Alfred Wigan gave a series of miscellaneous "readings" at Apsley House, with the permission of the Duke of Wellington. The "readings" comprised scenes from the "School for Scandal," the "Merchant of Venice," and "Hamlet," with Macaulay's "Horatius," Aytoun's "Death of Montrose," and two poems of Hood's. They were heard with the greatest attention, and received unanimous applause. A second "reading," at Stafford House, is announced for Monday next.

Derby New Market Hall.—The walls of the new Market Hall are now finished and ready to receive the roof. Some delay has been occasioned through the alteration of the original design for the roof, necessitating an entirely new set of plans for this part of the work. They have been prepared by Messrs. Ordish & Le Feuvre, of Westminster, engineers, under whose superintendence the iron roof is being carried out, Mr. Lucas, from their office, being clerk of works. The brick, stone, and wood-work, &c., which are under a separate contract, are being completed under the superintendence of Mr. George Thompson, borough surveyor, who was appointed by the market committee in place of Mr. Thorburn.

Liverpool Surveyorship.—The town council, after some discussion, have resolved to confirm an arrangement made by the local Finance Committee in a report on the duties of the surveyor and of his department; recommending, firstly, that the services of Mr. Weightman be retained, at his present salary, as consulting surveyor, and to manage the whole of the Corporation property, properly so called. Secondly, that a competent person be engaged to have the care of, and to be responsible for, all the buildings in the possession of the Corporation (with certain exceptions), the conduct of the purchases of all property required to be taken by the Corporation under the various Improvement Acts obtained from time to time by the council, and the preparation of plans, &c. And, thirdly, that the gentleman to be engaged as surveyor be experienced in his profession; not above forty years of age; and that his salary be 800*l.* per annum.

Water Supply for Ripon.—At a special meeting of the Ripon corporation, the report of Mr. Filliter, C.E., borough surveyor, and engineer to the waterworks, at Leeds, with respect to the different schemes for supplying the city of Ripon with a constant supply of pure water, was read. At the close of his report Mr. Filliter says,—"Finally, and to recapitulate, I have adjudged the premium for the best and most practicable scheme to Messrs. Stevenson & Utley, of Halifax, but consider Mr. Charlton's and Mr. J. K. Radford's plans are nearly equal thereto. I do not recommend any purchase of the existing waterworks. I advise that further examination be made of the following sources and schemes;—the river Skell above Aldfield Spa; the Lady Well springs, and any others of similar quality that may be discovered; the Kez-beck at or about Toad Hole Wood, as suggested by Mr. J. K. Radford; the water-wheel pumping scheme of Mr. A. Charlton from the river Ure; the river Laver beyond the magnesia limestone district. The corporation will find it advantageous to postpone their decision, if practicable to do so, until the ensuing dry season has passed." It was resolved by the meeting that the premium of fifty guineas be paid to Messrs. Stevenson & Utley, of Halifax.

South Kensington Museum. — During the week ending 9th July, 1864, 13,940 persons visited the Museum.

Railway Returns.—The traffic returns of railways in the United Kingdom, published for the week ending the 2nd of July, amounted, on 11,308 miles, to 666,565*l.*, and for the corresponding week of 1863, on 10,906 miles, to 611,769*l.*, showing an increase of 402 miles, and of the sum of 54,796*l.* in the receipts.

The Dining Halls Company.—This company, to advance the object of which Lord Brougham, Lord Shrewsbury, and others have given their names, is established to supply the industrial classes with good and cheap food (a substantial dinner being provided for 4d.). Hopes of pecuniary success are founded on the results of the Surrey Cooking Depôt, New Cut, the purchase of which is one object of the company. Looking into the accounts of this establishment, we found the profits about 20 per cent., and the customers well satisfied too.

The Murder on the North London Railway.—With reference to some recent outrages in railway-carriages, a correspondent says,—Have two or three long plate-glass squares about 10 inches wide glazed upright, not only in the partitions of each compartment, but also in the ends of the carriages, so that any passenger can see not only through the carriage, but likewise throughout the whole length of the train. There can be no doubt, that if the parties riding in the next compartment to Mr. Briggs could have seen into the one where he was, this foul murder would never have been attempted. Open carriages from end to end like the ordinary third-class are much safer than the closed compartments of the second and first class; but then they are very liable to give cold by some one keeping the windows down at the back of your neck.

Petroleum in America.—Writing on this subject in the "Journal of Science," Dr. Draper, of New York, says:—The exact source of petroleum is, up to the present, uncertain; whether it has all been produced by distillation from bituminous coal, anthracite being formed at the same time; or whether it has resulted directly from the bituminous fermentation of marine plants antedating the coal, and containing a larger proportion of hydrogen. The amount thrown out by some of the wells is enormous. One of them ejected 3,740 barrels a day, three 1,000 barrels, one 800 barrels. To "strike ile," has become throughout that region the synonym for rapidly growing wealthy. It has entirely displaced all other means of lighting, except gas. The great desideratum is a perfect chimneyless burner.

St. John's Hospital for Diseases of the Skin.—In the interest of the poor of London we are glad to observe that the much-neglected subject of skin diseases has at last attracted serious attention. The establishment of St. John's Hospital, Westminster, we believe, is calculated to supply a great public want, its laudable object being to place the poor of London in an equally favourable position with those of continental cities—as Paris and Vienna; the former possessing the richly endowed Hôpital St. Louis, devoted solely to treatment and study of cutaneous maladies. The principle of St. John's is, we are glad to observe, free admission; so that the poor man can obtain every necessary attention, and that daily, without loss of time, which to him and his family is of so great importance. Moreover, much benefit to science may be anticipated from careful observation in the hospital; and the objections urged against special hospitals (in which we participate), cannot apply to the present case, when we find it stated in a leading medical periodical, the *British and Foreign Medical and Chirurgical Review*, in reference to the want of opportunity in studying and learning skin diseases in England, that medical students constantly come to the end of their hospital life without being able to name or recognise with certainty the most common diseases of the skin. The knowledge which has been entirely neglected during the period of studentship is seldom acquired in the busy years of later life; and probably there are no branches of medical knowledge so neglected and so little understood by English practitioners as the diagnosis and treatment of skin diseases. The extent to which these diseases prevail and the misery they produce are nevertheless enormous.

Gas.—The Boston Gas Company's directors have determined to recommend to the shareholders a dividend of 8½ per cent. at their annual meeting.

Cheltenham Water Supply.—The prospectus of a new water-company for supplying Cheltenham with water has been issued. The capital is estimated at 125,000*l.* which it is proposed to raise in shares of 5*l.* each, and the water is to be conducted from the springs at South Cerney.

Bedford Drainage.—Mr. C. Trapp, of Manchester, has undertaken, for twenty guineas, to examine the plan of Mr. Usher for the drainage of the town. The sum, said the mayor, in announcing the circumstance, is much below the usual professional charges; but Mr. Trapp being a native of Bedford, and the corporation not a very rich one, he offered his services at the sum named, and will present his report in due course.

The old Castle Wall at Southampton.—Another endeavour to induce the Corporation to purchase and preserve this interesting relic, at a cost of 45*l.* for the wall, or of 300*l.* for the wall and its site together, has failed. In the council Mr. Stebbing urged, that whilst they were building a Hartley Institution, renovating the Bargate, improving the parks, and doing all they could to render the town attractive, it would be an act of vandalism to permit the destruction of a relic of the past, which constituted a remain of the old Norman works, by which they could trace the system of fortification which existed in former times. Mr. Tucker asked why those interested in the relic did not themselves subscribe and purchase it, instead of demanding for the purpose a grant from the public funds? Surely this interesting and historical landmark will not be allowed to be destroyed from want of so small a sum as is required for its preservation.

New Joint-stock Companies.—The number of new joint-stock companies brought out during the first half of the present year was 171. They represented a total capital of 116,203,500*l.* A great number have failed to establish themselves, and have been withdrawn; and the actual amount of shares taken would probably not represent more than 50,000,000*l.* Of the total 116,000,000*l.* of proposed capital about 53 per cent. was for banks and finance companies, 14 per cent. for the conversion of various industrial establishments already in existence into joint-stock associations, 12 per cent. for steam and other shipping enterprises, 6 per cent. for insurance companies, 5 per cent. for railways, 5 per cent. for estate investments, and about 1 or 2 per cent. for hotels. Last year, although the total capital proposed for companies seemed enormous, it did not amount to more than 100,000,000*l.*; while the progress of concoction this year has been at the rate of 232,000,000*l.* for the twelve months.

Accidents.—At Bury a fatal accident has occurred, resulting in the death of Mr. George Dewhurst, master bricklayer, of Heywood. Mr. Dewhurst's men were employed at Bury in finishing a factory chimney, 90 feet high; and, being anxious to have the work completed by a certain time, Mr. Dewhurst went to the top of the chimney for the purpose of expediting the workmen. He took part in the finishing process himself, and assisted to lay one of the cornice stones, on the top of which he stood after it was fixed. It is supposed that one of the legs of the triangle used for hoisting the stones must have been placed on a lower level than the other two, as it suddenly turned over, precipitating Mr. Dewhurst, and the stone on which he was standing, to the bottom of the chimney. Mr. Dewhurst fell through the roof of a weaving-shed, breaking in his fall not only through the roof, but also through two thick joists of wood, and alighting on a young woman who was at work in the shop. All efforts to restore consciousness were unavailing, Mr. Dewhurst expiring shortly after the accident happened.—— For about a week a number of men in the employment of Mr. Graham Holmes, contractor, have been engaged in painting the inside of the roof of the market-hall, Birmingham. The work has been performed by means of a moveable scaffolding, which reached to the roof of the hall. As three men were at work upon the scaffolding at the end of the hall nearest the Bull-ring, it suddenly overbalanced, and the men were thrown to the ground. They fortunately escaped without any serious injury.

RESULTS OF SETTING CAPITAL FREE. Within the eight years elapsed since the passing of the main Act, 3,830 limited companies have been formed, with an aggregate of 12,085,073 shares, and a nominal capital of 429,103,622*l.*—*Parl. Return.*

A PLAGUE-STRICKEN TOWN. — The Spanish journals mention the outbreak of a dangerous malady in the city of Murcia:—In constructing the railway which passes through that place, a large mass of earth was excavated from the neighbourhood of the city for the purpose of making the embankments. At the spot whence the earth was taken a quantity of stagnant water has since collected, the malaria from which is said to have produced an epidemic fever, with all the characteristics of a plague. More than 1,500 persons in Murcia and the environs have been attacked, and a large number of deaths have already taken place. A manifestation against the railway company, by the population, lately took place, and more serious disturbances were feared.

SALE OF BUILDING SITES AT REDLAND, BRISTOL. Messrs. Alexander and Daniel, auctioneers, recently submitted, for public competition, some valuable property at Redland, including sites for first-class villa residences. The property was offered in four lots, the first being the freehold residence known as Redland Green House, to which are attached two closes of pasture land, which have an extensive frontage to the road leading from Redland to Durdham Down. This lot was knocked down to Mr. G. O. Edwards, for the sum of 3,050*l.* Mr. J. G. Hobbs was the purchaser of the second lot, which consisted of a close of building, and about ten acres and a half in extent, and having a good frontage to Durdham Down. This lot realised 4,000*l.* Mr. Joseph D. Weston was the highest bidder for both the remaining lots. No. 3 adjoins the second lot, and consists of twenty-eight acres of pasture land. The sum given for it was 3,800*l.* The last lot, for which 4,500*l.* were given, consisted of a farmhouse, outbuildings, and forty-one acres of pasture land, forming part of Cold Harbour Farm. It is anticipated that a number of new villas will be erected at Redland, on portions of the land now sold. The number of detached residences built lately in the neighbourhood of Bristol is wonderful.

TENDERS.

THE Advertiser, aged 20, wishes for a RE-ENGAGEMENT in a Builder's or Decorator's Office. Has served three years at the trade, and is used to superintending men, taking orders, &c. —Address, W. J. at Brooks & Co's. 24, Old Cavendish-street, W.

STAIRS.

THE Advertiser a (STAIRCASE HAND) wishes for EMPLOYMENT.—Address, J. C. 2, Neville-street, Lambeth, S.

TO BUILDERS AND CONTRACTORS.

THE Advertiser wishes an ENGAGEMENT as MANAGER of a BUSINESS, or to SUPERINTEND large WORKS. Is thoroughly practical, well up in plans, quantities, &c. and a good estimator. Has had the management of an extensive business for five years. First class references or testimonials.—Address, Mr. JOHN RATCLIFFE, Marston-road, Stafford.

TO GENTLEMEN, BUILDERS, AND OTHERS

TWO YOUNG MEN (brothers), WANT EMPLOYMENT, as GRAINERS, PAPERHANGERS, piecework, at rates which cannot fail to give satisfaction. Town or country.—Address, A. B. 132, Tottenham-court-road.†

TO ENGINEERS AND CONTRACTORS.

THE Advertiser, recently engaged on important railway works, as DRAUGHTSMAN and ARCHITECTURAL ASSISTANT, and experienced in station work, desires a similar ENGAGEMENT, in England or abroad.—Address, J. A. S. Post office, Kennington Park.

TO ARCHITECTS, &c

CLERK of WORKS.—A thoroughly practical CLERK of WORKS, of eleven years' experience, is open to a RE-ENGAGEMENT. Eight years' reference from an eminent London architect, by whom he was last engaged.—Address, J. BURRILL, Market House, near Ruislip, Middx.

TO BUILDERS.

A MANAGER requires a RE-ENGAGEMENT. Is used to large works, estimating, contracting, &c. —Letters, R. C. Office of "The Builder."

TO ARCHITECTS, &c.

AN Assistant, experienced in Gothic design and detail of perspective, quantities of mensuring, and the routine of an office, &c., is thoroughly practical, desires a SITUATION. Salary moderate, if for a permanency.—Address, C. F. Post-office, Exeter.

TO ARCHITECTS AND CONTRACTORS.

A THOROUGHLY Practical Clerk of Works is open to a RE-ENGAGEMENT, as SUPERINTENDENT on large WORKS for a Contractor. First-class references. No objection to country.—Address, H. E. R. Office of "The Builder."

TO ARCHITECTS, &c.

A FULLY qualified Practical ASSISTANT is now DISENGAGED. Well up in details, construction, specifications, and measuring up. Terms moderate.—Address, Z. Z. Post-office, St Pancras-road.

AS WORKING FOREMAN of MASONS. The Advertiser is accustomed to the management of a general business. Has good knowledge of the building trade generally. Steadydraughtsman, good measurer, accountant, has had charge of large works. Could undertake any part of country.—Address, P. M. W. Office of "The Builder."

TO ARCHITECTS, ENGINEERS, CONTRACTORS, AND BUILDERS.

ABROAD.—WANTED by the Advertiser, an ENGAGEMENT abroad as SURVEYOR or ASSISTANT for the present three Russian lines. Measuring, taking out quantities in London Building Firm. Is practically acquainted with railway bridge and fully able to superintend the erection of Works. Salary moderate.—Address, Y. Z. Post-office Essex-street, Islington, N.

A BUILDER'S CLERK, or a TIME-KEEPER, who writes a good hand, wanted for the Suburbs.—Address, P. Office of "The Builder."

TO BUILDERS AND SURVEYORS.

AN ESTIMATOR and DRAUGHTSMAN, having a portion of his time unemployed, is open to ASSIST in measuring up work, taking out quantities, preparing drawings and tenders, on moderate terms.—Address, or apply, to H. R. No. 2, North street, Hyde Park square, W.

A GOOD MASON, in soft or hard stone, an first-class letter-cutter and painter of all kinds of lettering in stone or marble, WANTS constant EMPLOYMENT. Day-work.—Address, R. C. Office of "The Builder."

TO ARCHITECTS

AN experienced ASSISTANT desires a RE-ENGAGEMENT in a London Office. Is fully competent to prepare finished drawings for competition purposes, working drawings and details and used to first class competitions. Well up in perspective.—Address, E. S. 32, St. George's road, Southwark, S.

TO BUILDERS AND CONTRACTORS.

AS FOREMAN.—WANTED, by an energetic and experienced Man, Carpenter and Joiner by trade, a RE-ENGAGEMENT as GENERAL FOREMAN.—Address, G. P. 4, Most terrace, Nine Elms-road, S.

BUILDING GROUND.—TO BE LET, from Michaelmas next, a valuable PLOT of GROUND, adjoining the Lea Bridge Railway Station, with a frontage of 500 feet to the Lea Bridge-road, the total area being five acres and a half.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

TO BE LET, Large and Valuable PREMISES, with water communication, one mile north from the Bank. Formerly occupied by a mahogany merchant, who realized a large fortune there.—Apply to E. & W. STURGE, Bridge Wharf, City-road, E.C.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms; stabling for eight horses and coachhouses for four carriages; suitable servants' offices; orchard, ornamental grounds, with greenhouses, in all 28 acres; gravelly soil; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell-square.

LORDSHIP ROAD, Stoke Newington.—TO BE LET, on Building Leases of 80 years (at low ground rents), several PLOTS, eligible for semi-detached villas and terraces.—Apply to Mr. RODDA, Bouverie-road, Church-street, Stoke Newington. N.B. Bricks supplied on the estate at low prices.

WATERSIDE PREMISES, City-road.—Messrs. FULLER & HORSEY are instructed to LET, on LEASE, from Michaelmas next, extensive WATERSIDE PREMISES, occupying a site of 21,000 superficial feet, situate on the Wenlock Basin, City road, and comprising a substantial and convenient brick built manufactory of two floors, engine and boiler houses, with 24 horse power steam engine and three circular boilers, range of brick drying sheds, and yard with gateway entrance. There is a water frontage of about 207 feet.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

LARGE HOUSES are REQUIRED at WANSTEAD.—The Grove Estate is five minutes' walk from the station. Modern and tastefully planned. THOMAS EDWARD KNIGHTLEY, Architect, 25, Cannon-street, City.—The Freehold may be purchased.

NEWLY and most substantially erected WAREHOUSES and LAND, occupying an area of nearly half an acre, near the entrance to the London Docks, well adapted for bonded warehouses, TO BE LET on LEASE, or the Freehold to be sold.—Apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

TO BUILDERS and OTHERS.—LAND TO BE LET on BUILDING LEASES.—Upwards of 3,000 feet frontage, beautifully situate at Penge, within a short distance of three railway stations. Apply to Mr. LEWIS, Architect, 9, John-street, Adelphi; Mr. RICHARDS, Solicitor, Croydon; or to Mr. GARROOD, Hawthorn grove, Penge. Money advanced if required.

PUTNEY.—To BUILDERS and OTHERS. Superior BUILDING LAND TO BE LET, on the Richmond-road, Putney, within 10 years of the railway station. Lease, 99 years. Ground rent moderate. Liberal allowances made.—For plans, &c. apply to J. H. ROWLEY, Esq. Architect, 35, Poultry, E.C.

BUILDING LAND TO BE LET, situate at Vauxhall, Leytonstone, and Camberwell.—For particulars apply to Messrs. DRIVER & CO. 4, Whitehall, London, S.W.

FOREST HILL.—BUILDING LAND TO LET on this hill, commanding extensive views. — Apply to A. B. 192, Bermondsey-street, S.E.

WATERSIDE PREMISES, PIMLICO. TO BE LET, with immediate possession, a WHARF, in Upper Belgrave-place. Well adapted for a marble or stone merchant, with office, landing crane, &c.—Apply to PULLEN, HORNE, & EVERSFIELD, 20, Parliament street, Westminster, and 80, Lombard-street, City.

TO MANUFACTURERS.—Very Extensive PREMISES TO BE LET, with immediate possession, consisting of a range of Warehouses with excellent Cellarage, Counting-house, and Dwelling house, Paved Yards, and a supply of water. The above are situate close to a leading thoroughfare near Leadenhall-street.—Apply to Messrs. TENNANT & DARLEY, 4, Raymond-buildings, Gray's-inn.

TO CARPENTERS and PACKING-CASE MAKERS.—TO BE LET, Extensive PREMISES, in the neighbourhood of Covent Garden.—Apply to Mr. HUGHES, Solicitor, 33, Bedford-street, Covent Garden.

TO BE LET, extensive and valuable POTTERY WORKS, situated close to water and railway communication. The property consists of about 35 acres of land, nearly 5 acres of which are covered by buildings, which comprise two kilns for Bristol ware, one for fine stoneware, and one home kiln for red pottery, for which there is an extensive local demand; eighteen dwellings for the workmen, stabling for fourteen horses, sheds, warehouses, &c. &c. The certainty that many of the Lambeth Potteries must be closed by the Southern Embankment of the Thames, renders this a most desirable property.—Apply to Messrs. LEMAN, GROVER, & CO 51, Lincoln's-inn-fields; or Messrs. ROBINSON, HINE, & HAYCOCK, 4, Charter House-square.

FREEHOLD LAND TO BE LET, on Building Leases, at low ground-rents, on the estate of the Carpenters' Company, at Stratford, Essex, close to the Station and Church, of which convenient plots, with river frontage, for the erection of manufactories, and smaller for road houses or cottages. For plans and particulars, apply at the Clerk's Office, Carpenters' Hall, London wall.

BUILDING LAND.—TO BE LET, several PLOTS of very eligible LAND, within a quarter of a mile of Bromley (Kent) Station.—Apply to Messrs. WIGG & OLIVER, 7, Bedford row, W.C.

PORTLAND CEMENT WORKS.—TO BE LET, for a term of years, driven by steam and water power, capable to work, and in full work, and extended to any extent, lying on the beach, north end of an abundant supply of Sunk... and through Yarmouth, to all parts of the world. The Beer Arms Station is within five minutes' walk.—Apply to Mr. JAMES NESBIT, Merton, Norwich.

TO CONTRACTORS, BUILDERS, and BRICKMAKERS.—Near to Mordon, Old Malden, and Worcester Park, and Sutton Railway Stations.—TO BE LET, a number of ACRES of very first-rate BRICK-EARTH LAND, which may be worked without brick-making plant at a moderate royalty. Specimens of various articles manufactured from the clay may be inspected, and further information obtained at the Offices of Messrs. WIGG & OLIVER, No. 7, Bedford-row, W.C.

TO BUILDERS, CAPITALISTS, and OTHERS.—TO BE LET, on Building Lease, a compact FREEHOLD ESTATE, containing about 90 acres, four miles distant from the Marble Arch. The estate, which is well situated, commands picturesque views of the adjoining country, is very eligible for the erection of first-class private residences, and well adapted for the formation of a small park of villas. It is within a short distance of two railway stations, and additional railway accommodation will shortly be provided for the neighbourhood; rendering it equal, if not superior, to any locality round London.—Parties may not treat either for the whole or for any portion of the estate, may obtain further and further particulars upon application to Messrs. REEVES & BUTCHER, Architects and Surveyors, 102, Guildford-street, Russell-square.

FIFTY FEET FRONT, 192 FEET DEEP TO BE LET, on building lease, for ninety years, a PIECE of FREEHOLD GROUND, situated Linden-grove, Nunhead, Peckham Rye. Liberal advances can be had.—Apply at 221, Union-street, Borough.

TO BUILDERS.—A most eligible Plot of BUILDING LAND, adjoining a Railway-station, in an important town, about 60 miles from London, can be had on advantageous terms. Liberal advances.—Apply at the Offices of Messrs. ELMSLIE, FRANEY, & HADDON, 43, Parliament-street, London.

NOTICE.—TWICKENHAM PARK, near RICHMOND.—Most Eligible BUILDING LAND TO LET or LEASE, for Ninety-nine Years, in Large or Small Plots. Money advanced if required.—For particulars, apply to W. BACKHURST, at the Estate Offices, Twickenham Park; or EDWARD GUILLAUME, Esq. 14, George street, Mansion House, London.

TO BRICKMAKERS.—TO BE LET, in consequence of the decease of the late owner, a valuable BRICKFIELD, of about 4 acres fronting a main road and near to an important town in Hertfordshire, about twenty miles from London, and only half an hour's ride from the station. The brick earth averages a depth of upwards of 25 feet, and lime is found on the property. It is now in full work, and, as extensive building operations are taking place in the neighbourhood, a ready sale of all kinds of bricks can be effected at very good prices.—Address, DEBENHAM & TEWSON, 50, Cheapside.

TO LET, a BUILDER'S, WHEELWRIGHT'S, and SMITH'S BUSINESS combined, in a good neighbourhood, situate at Windlesham, near Bagshot, Surrey.—Apply to Mr. CREWDSON, Builder, York Town, Frimley, Surrey.

BRICKS! BRICKS!! BRICKS!!!—A large quantity of ROUGH STOCKS, good colour, FOR SALE. Apply, T. O. Gloucester Villa, Seven Sisters-road, Green-lanes, Stoke Newington.

BRICKS for SALE.—About 200,000 RED FACING BRICKS, lying at Grays, Essex.—Apply at the Office of the Grays' Chalk Quarries Company, Limited, 6, George-yard, London-street, London, where a sample may be seen.

TO BUILDERS and OTHERS.—Superior RED and STAINED TILES, RED KILN BRICKS, and ORNAMENTAL WARE in Stock and to Order, at PRIMLIN'S Brick and Tile Factory, Westerham, Kent. Can be put into Medway barges, or on the South-Eastern Railway.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of

J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two fold.

1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is much improved from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.

2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.

Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

SAMPLES of BRICKS, TILES, &c. Made at EAST COWES PARK, Can be seen in the Constructional Department, KENSINGTON MUSEUM. R. LANGLEY, Agent.

MEDWAY LIME and CEMENT WORKS.
TO BE DISPOSED OF, the well-established BUSINESS, now in full operation, of the MEDWAY LIME and CEMENT WORKS, situate at Halling, a station on the North Kent Railway, Kent, on the banks of the River Medway, together with the Machinery, Utensils, &c. The Works comprise a wash mill with drying floor, three cement kilns, a mill with three pairs of stones and crushing rolls, engine-house, with pair of high-pressure steam-engines, equal to 50 horse power; three steam-boilers, chimney-shaft, range of eight dome head lime-kilns, a tunnel-kiln, spacious chalk-pit, landing-wharf and stage next the Medway, with hoist worked by steam power, &c. the land occupied by the buildings being about 3a. 2r. Pr. The South-Eastern Railway intersects the property, from which a siding has been made. The Works have a high repute for the quality of the cement manufactured, for which there is an unlimited demand. In connection with the property are a Farm House, with out-buildings, Twenty-three Cottages, a Manager's Residence with garden, and several pieces or parcels of land, containing in all 135a. 2r. 20p.; and also Two Freehold Houses at Halling. For particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

TO BUILDERS and CONTRACTORS.—TO BE DISPOSED OF, a successful BUSINESS of a BUILDER, in Kingston-upon-Hull, the present owner having realised sufficient to retire with. A good business is done on the premises, and can be entered upon at a very low valuation. It consists of a large commodious house, workshops for fifty men & horses, engine and boiler, circular saw, table with spout (irons attached), first-class tenoning machine, first-class saw-frame for circular work, mortising machine, lathe, and steamer for joists, wood. The whole may be entered upon for the sum of 800l. Rent, including house and premises which close with a pair of gates, only 20l. per annum, as it includes one-third of the fronting and premises. Note but ample cash will be treated with. Parties applying must be of respectable character, there being no good-will, and the present owner will assist purchaser six months with his knowledge of the business.—All applications to be addressed, BOX, 240, Post-office, Hull.

BUILDER'S BUSINESS WANTED, with a good jobbing connexion, where two or three men are constant. Must be in London. The stock, &c. to be taken at a valuation.—Address, D. R. Office of "The Builder."

A GOOD BUILDER'S BUSINESS TO BE LET, in the country. A Jobbing Trade. Does about 600l. per year. With workshops, dwelling-house, large yard, out-buildings, kitchen garden, stables, &c. and two cottages. The rent is only 25l. per year. There is plenty of room to extent the business.—Address, E. Office of "The Builder."

MONEY.—IMMEDIATE CASH ADVANCES on FREEHOLD and LEASEHOLD PROPERTY, REVERSIONS and ANNUITIES, WINE, SPIRIT, and TIMBER WARRANTS, FURNITURE, SHARES, &c.
Mr. RICHARD CROSSLEY, 17, Moorgate-street, Bank, E.C.

£1,000 IN CASE OF DEATH, or an Allowance of 6l. per week while laid up by Injury caused by
ACCIDENT OF ANY KIND,
Whether Walking, Riding, Driving, Hunting, Shooting, Fishing, or at Home, may be secured by an Annual Payment of 3l. to the RAILWAY PASSENGERS' ASSURANCE COMPANY.
MORE THAN 8,000 CLAIMS FOR COMPENSATION
HAVE BEEN PROMPTLY AND LIBERALLY PAID.
For particulars apply at the Offices, 10, REGENT STREET, and 64, CORNHILL. WILLIAM J. VIAN, Secretary.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN BOND ASSOCIATION
(Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 1,000l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemable, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal, sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

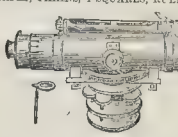
London Office, 377, Oxford-street, W.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION, 1862.
MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.
Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.
Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico, S.W.



PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862
IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern-book, designed by M. Digby Wyatt, esq. together with a special gas and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.
May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.
London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Maclesfield-street North, City-road Basin, N. Finally, that the trade term, "TERRO METALLIC," is the exclusive right of the Proprietors, and Sindry, that the "Reports of the Jurors," page 681, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

GUTTA-PERCHA MILL-BANDS.—The Gutta Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lubricators, &c. fully justifies the strong recommendations they have constantly received. Their durability and strength, perfect concentricity and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from one to six feet long, render them superior to leather for all mill work for all purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Sheets, Pump-buckets, Suction-pockets, Bottles, Union Joints, Rasps, Rollers, Bowls, Toy Rings, Cistern-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers throughout the country.
THE GUTTA-PERCHA COMPANY, PATENTEES,
WHARF ROAD, CITY ROAD, LONDON.

PORTLAND, ROMAN, and PLASTER

CEMENT MANUFACTURERS,
STROOD LOCKS, on the River Medway, KENT.
MESSRS. LARK & PARROCK,

Late Lark, Fletcher, & Co. are prepared to supply their Cements, of the best quality and on the most advantageous terms, either for Metropolitan brickwork, or for tidal works, or otherwise, and for home and foreign trade, either direct from the Manufactory, or at the WHITE LION WHARF, BANKSIDE, LONDON.

N.B.—Shipping particulars for the Foreign trade treated with on the most advantageous terms. Shops of any model delivered and shopped. HYDRAULIC LIME MANUFACTURERS OF THE BEST QUALITY.

PURE HYDRAULIC LIME, Manufactured

from the best HALKIN MOUNTAIN LIMESTONE, same as supplied for the construction of the Liverpool and Birkenhead Docks.
The HOLYWELL LIMESTONE COMPANY are prepared to deliver the above, in lump or ground, packed in bags, into waggons, at the Holywell Station of the Chester and Holyhead Railway, or on board vessels at Greenfield Wharf, Chester River.
Prices and particulars furnished on application to Mr. EVAN EVANS, Manager, Pary's Mine Works, Holywell, Flintshire.
The Company's analysis gives the quality of the lime in general to that used by the Engineer of the Liverpool and Birkenhead Docks.
Agents wanted. No application attended to without a banker's reference

BURHAM BRICK, LIME, and CEMENT

COMPANY, BURHAM WHARF, BELVIDERE-ROAD, LAMBETH.—The public are informed that the Company have taken the above Premises, and have ON SALE, VAULT BRICKS, TILES, POTTERY, DRAIN-PIPES, GREY STONE LIME, PORTLAND and ROMAN CEMENTS, and BUILDING MATERIALS of all descriptions. Architects and Builders are respectfully informed that goods of any pattern or design can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement.

PARIAN CEMENT for INSIDE WORK.

With this Material Houses may be finished and occupied in one fourth the usual time, as Parian Stucco may be painted or papered within forty-eight hours. A finer quality produces a beautiful and hard marble imitation of marble.—Manufacturers, FRANCIS, BROTHERS, & POTT, Nine Elms, London.

3s. 9d.
The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON.
In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.
Experience has shown that this shape is the most simple and efficient and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

st. It is a non-conductor.—2nd It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half umber usually required.—4th. It can be easily applied by any unpractised person.—5th From its lightness, weighing only about 42 lbs. to quare of 100 feet, the cost of carriage is small.—6th Under slate, metal, or tiles, it is a most effective non conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. ... under the name of "Improved Zinc Paint," or "Patent Zinc Paint." Every Pure Zinc Paint is so workman can produce good work with ... which will have no covering. The Patent Zinc Paint will never willingly assume any other Paint for their best work.

... One gallon of the ground paint in oil has weight, two hundred weight of this Paint, with six gallons of oil covers as much ... two hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 73–74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c. to meet the great public demand; and also for the consequent more extensive execution of all descriptions of hot water, bath, laundry, and steam work.

73–74, Bishopsgate-street Within.

COMPETITIONS.

BOROUGH of WALSALL.—To ARCHITECTS.—The Walsall Town Council are desirous of receiving DESIGNS for a TOWN-HALL and GAOL.—A premium of 20*l.* will be given for the Design which in the opinion of the Council is the best, and a Premium of 15*l.* for that which is in their opinion the second-best; and both these sets of plans are to become the absolute property of the Council. Plans of the site, with statements of the offices and conveniences required, and of the conditions to be observed by the competitors, may be had on application to the Town Clerk.—By order, SAMUEL WILKINSON, Jun. Town Clerk.

Walsall, 14th July, 1864.

TO ENGINEERS.—The Tamworth Local Board of Health being desirous of obtaining PLANS, ESTIMATES, and SPECIFICATIONS for the DRAINAGE of the TOWN, and for obtaining an adequate SUPPLY of WATER suitable for domestic purposes, offers a Premium of 25*l.* for such Plans, &c as shall be ultimately approved of and adopted. The Board will pay for one set only of plans, estimates, and specifications, and which shall become the property of the Board. Those not adopted will be returned. All plans, estimates, and specifications are to be sent to me on or before the 20th day of AUGUST next THOMAS ARGYLE, Town Clerk.

Tamworth, 14th July, 1864.

SUSSEX COUNTY HOSPITAL.—Certain ADDITIONS and IMPROVEMENTS to the BUILDINGS of the SUSSEX COUNTY HOSPITAL being required, Architects are hereby invited to send to the Committee of Management, within three months from this date, Plans, Specifications, and Estimates, in accordance with the Medical Officer's Report and other printed instructions to be obtained from the Secretary.

N.B.—The plans and measurements of the present building can be seen at the Hospital.—By order, ARTHUR VESEY, Secretary.

Brighton, 13th July, 1864.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—To BUILDERS and CONTRACTORS.

TENDERS are required for the PERFORMANCE of the WORK required in the ERECTION of a DOUBLE BALL-COURT at the top of C. Lines in the North Camp at Aldershott, Plants, the plans and specifications for which may be seen at this Office.

Persons desirous of Tendering for this Work must leave their names at this Office on or before SATURDAY, JULY 30th, 1864, and deposit the sum of Half a Guinea for the Bills of Quantities, which may be had at the same time, as also forms of Tender and general conditions of Contract.

The Tenders to be addressed under cover to the Director of Contracts, War Office, Pall mall, London, S.W. indorsed in the left-hand corner, "Tender for Ball-court at Aldershott," and delivered by TEN o'clock a.m. on SATURDAY, the 6th of AUGUST next.

Royal Engineer Office, Aldershott, 20th July, 1864.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.

TENDERS are required for the ERECTION of an OFFICERS' MESS ESTABLISHMENT, and a portion of BOUNDARY WALL, at Milton Barracks, Gravesend.

Persons desirous of Tendering for the execution of these Works are requested to make application to this Office, on or before MONDAY, the 25th JULY, 1864, and to pay the sum of 10*s.* 6*d.* for the bills of quantities, which will be forwarded as soon as prepared by the Government Surveyor.

The Secretary of State for War does not bind himself to accept the lowest or any Tender

Royal Engineer Office, Gravesend,
15th July, 1864

BLACKFRIARS BRIDGE. — TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland, granite in blocks and in steps, Roach, Portland, and rough rubble. Also for the handsome columns, with moulded bases and carved caps.—Apply to Messrs. THORN & CO. Contractors, on the Bridge.

TO CONTRACTORS and OTHERS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS for the REPAIRING and MAKING UP of York-street, Cross-street, and Stanford, in the parish of Battersea. The specification can be seen at the Offices of the Board, as below, between the hours of TEN and FOUR. Tenders are to be sent in under seal, addressed to the Board, and indorsed, "Tender for Repairing Streets, Battersea," on or before MONDAY, 25th JULY inst. Security will be required for the due execution of the Contract. The Board do not pledge themselves to accept any Tender.—By order of the Board of Works for the Wandsworth District,

ARTHUR ALEX. CORSELLIS, Clerk to the Board.

Battersea rise, Wandsworth, S.W. July 12th, 1864.

CARDIFF HOTEL COMPANY (Limited). To BUILDERS.—TENDERS will be received for BUILDING an HOTEL in St. Mary-street, Cardiff, for the Cardiff Hotel Company (Limited). The specification and drawings may now be seen at the Company's Office, 23, Trinity-street, Cardiff; and copies of the bill of quantities may be obtained, after the 23rd instant, upon payment of one guinea for each. Sealed Tenders, endorsed "Tender for Hotel," to be delivered at the above Office, addressed to the Secretary, HENRY HEARD, Esq., not later than on the 3rd of AUGUST next. The directors do not bind themselves to accept the lowest or any Tender.

Cardiff, July 11th, 1864. C. E. BERNARD, Architect.

TO BUILDERS.—Trinity House, London, E.C. 11th July, 1864.—The Corporation being desirous of obtaining TENDERS for the ERECTION of a STOREHOUSE and OTHER BUILDINGS at their Quay Wharf at Harwich, hereby give Notice that the plans, specifications, forms of Tender, and conditions of the proposed contract are deposited at this House and at the Quay Wharf, and may be inspected on any day between the hours of TEN o'clock a.m. and FOUR p.m. The Tenders must be sent to this House on the forms provided and directed as required, on or before MONDAY, the 1st of AUGUST next. The Corporation do not pledge themselves to accept the lowest or any Tender.—By order of the Corporation.

P. H. BRETHON, Secretary.

BRICKS for SALE.—About 200,000 RED FACING BRICKS, lying at Grays, Essex.—Apply at the office of the Grays Chalk Quarries Company (Limited), 8, George-yard, Lombard-street, London, where a sample may be seen.

TO BUILDERS and OTHERS.—Superior RED and STAINED TILES, RED KILN BRICKS, and ORNAMENTAL WARE, in Stock and to Order, at TREMLIN'S Bridge and Tile Factory, Wateringbury, Kent. Can be put into Medway barges, or on the South-Eastern Railway.

TO BRICKMAKERS. — All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of

J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two-fold.

1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.

2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.

Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

AYLESFORD and BURHAM BRICK WORKS near Maidstone, Kent.

Extracts from notices in the undermentioned publications

"Conventionalized patterns, often displaying great beauty of form, characterize the examples sent to us. With a few exceptions, the colouring of the specimens is commendable, in many it is worthy of the highest praise."—*Athenæum.*

"The designs are exceedingly elegant, and the colours good and well arranged. Some of the patterns are of strictly ecclesiastical character, suitable for museum churches and oratories, or they may be used as accessories in church decoration."—*Church Builder.*

"The majority of the patterns are exceedingly satisfactory, and not expensive."—*Builder*

"These designs are infinitely varied, yet always consistent and effective; the colouring is pre-eminently good, both in the selection of tints, and in harmonious combinations; and the quality of the paper is of the highest order."—*Art Journal.*

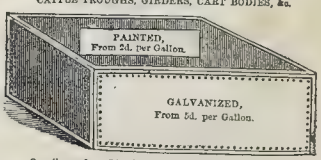
AUSTIN'S IMPERIAL PATENT SASH
and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of FLAX, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.



WINDOW-BLIND MATERIALS. — H. & J. DOVE, 31, Ludgate-hill, London, E.C. MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

MUSGRAVE'S PATENT HALMLESS LOOSE BOXES, MUSGRAVE'S PATENT IRON COW-STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first-class stables in almost every county in England and MUSGRAVE, BROTHERS, are now fitting several very large establishments under directions of London Architects, noted for adopting only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees, England and Canada,

A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure

"GEO. GILBERT SCOTT, 20, Spring Gardens, London."

GARDNER'S SUNLIGHT

GAS BURNER and FITTING ESTIMATES

Offer important advantages to Architects, Builders, and the Public generally.—GARDNER'S, No. 453, Strand, Charing-cross, four doors from Trafalgar-square, London.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, AND YORK ROAD, KING'S CROSS.

FIRE-PROOF CONSTRUCTION.—

FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with a bed of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary floor-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as meeting the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of moderate means.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,

12, YORK BUILDINGS, ADELPHI

LIGHTNING CONDUCTORS.

R. S. NEWALL & CO. Patentees of the COPPER ROPE LIGHTNING CONDUCTOR, supply the same, with the point and all staples, complete for fixing, at the following prices:—

Manufactured by
THE LIZARD SERPENTINE COMPANY (Limited),
Office, 24, St. James's-street, London, S.W.; Works, Carleon Cove, Lizard, Cornwall.
Agent for Manchester and Liverpool, T. OAKDEN, 94, King-street.

TO MARBLE and STONE MERCHANTS.
FOR SALE, a large quantity of PURBECK MARBLE, consisting of about 150 tons of slabs and sizes, from the quarry late in the occupation of Mr James Vose.—For further particulars, apply to Mr HENRY ANDREWS, Winchester-street, Salisbury.—Carriage free to Wareham or Swanage.

POLISHED GRANITES.—TOMBS COLUMNS, PILASTERS, &c. &c. in RED, BLUE, or GREY GRANITE, supplied by
WILLIAM & JOHN FREEMAN,
27, MILLBANK STREET, LONDON, S.W.

ABERDEEN POLISHED GRANITE WORKS.—Awarded Prize Medal in 1851, Silver Medal in 1855, and Prize Medal in 1862.
Red, Blue, and Grey Granite for every description of architectural construction, decoration, memorials, and general purposes.
Apply to ALEX. MACDONALD, FIELD, & CO., Aberdeen; and at London Depôt, 404, Euston-road, N.W.—DAVID WILLET, Agent.

DARTMOOR GRANITE.—The Dartmoor Granite Quarries, lately belonging to the Haytor Granite Company, are now worked by the Dartmoor Granite Company, of Laira Wharf, Plymouth, and Portland Wharf, Grosvenor-road, Pimlico, London.—For prices, &c. apply to W. H. HOLLAND, Agent and Manager for the Company, Portland Wharf, 20, Grosvenor-road, Pimlico, S.W.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplies direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 27, Millbank-street, London, S.W.

RED MANSFIELD STONE, WHITE MANSFIELD STONE.
YELLOW MAGNESIAN or BOLSOVER LIMESTONE.
Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station.
Mr ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

CAEN and AUBIGNY STONE.
FOUCARD, BROTHERS,
STONE MERCHANTS and QUARRYMEN.
Cargoes shipped to order from Caen to any port. Contracts taken for any quantities.
Office—10, Three Crown-square, Southwark.

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales. SLABS and CISTERNS delivered at any station in quantities of not less than Five Tons, from their depôts.
BANGOR, GARSTON, SALTNEY, CHESTER, and GLOUCESTER.
Prices forwarded and estimates given on application.
1, BOLD TERRACE, CHESTER.

WELSH GREEN SLATES can now be obtained in unlimited quantities and at reduced rates.—For prices and samples apply to
ALFRED BRABY,
BANGOR WHARF, BELVEDERE ROAD, LAMBETH, S.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks, Lime, and Old Bricks. Dry Rubbish delivered, per barge, in any quantity alongside the Thames.

TO CONTRACTORS, QUARRY OWNERS, MINERS, &c.
BLAKE'S STONE BREAKER is recommended by the most Engineers in this and other countries to Break Stone of every description, of the best quality for Macadam Roads, Concrete, Ballasting Railways, &c. It takes in large blocks or round boulders, and reduces them to fine road metal, at a cost of from 2d. to 3d. per ton. If your pauper labourer costs 3d. per day, this machine will do more work, and do it better, at 2d.—For circular testimonials, &c. apply to
H. R. MARSDEN,
SOHO FOUNDRY, LEEDS.

LITTLE CASTERTON FREESTONE.
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD,
The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed wise. It works freely with a tooth saw, and is wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE is used largely by London Builders.

THE PATENT CRYSTAL WINDOW BARS, adapted for domestic windows, shop fronts, conservatories, skylights, verandahs, exhibition and counter cases, aquariums, fern cases, &c. &c. combining perfect transmission of light, durability, against rust or decay, and economy in the facility with which they are kept clean. Aquariums with slate or marble bottoms of various sizes, with or without fountains, also of glass. Manufactured by LLOYD & SUMMERFIELD, Park Glass-Works, Birmingham. All kinds of flint glass, cut and plain, coloured window sheet, optical sheet, coloured lenses, &c. &c.

STAINED GLASS WINDOWS for CHURCHES and DWELLINGS.
HEATON, BUTLER, & BAYNE,
New King-street, Covent Garden, W.C. Removed from Cardington-street, Hampstead road.
Specimens at the Exhibition of Stained Glass Windows, South Kensington Museum.

STAINED GLASS for WINDOW DECORATION, GLASS MOSAIC and PAINTED OPAQUE GLASS for WALL DECORATION.
J. T. LYON & CO.
13, BERNERS-STREET, OXFORD-STREET, W.
Price lists, drawings, and estimates sent on application. Work executed on the most moderate terms compatible with excellence of design, material, and workmanship.

LEAD GLAZING for CHURCHES and other BUILDINGS, Plain Quarries, Geometrical Patterns, or Fret Work. Builders and the Trade are supplied with every description of Lead Lights and Window Lead, on the shortest notice and lowest terms, by F. ODELL, Plain and Ornamental Lead Glazier to the Trade, 8, Bath-street, City-road, E.C. Extra strong Lead for Churches, &c. Estimates forwarded on receipt of particulars.

R. B. EDMUNDSON & SON, STAINED GLASS OF EVERY DESCRIPTION,
Ancient and Modern, for Ecclesiastical and Domestic purposes. Wall Painting Monumental Brasses, &c. &c. Designs and Estimates on application.—Specimens may now be seen at the Exhibition of Stained Glass, Kensington Museum, Nos. 20, 26, 27, and 28.
WORKS, NEW WAKEFIELD-STREET, OXFORD STREET, Near the BRIDGE, MANCHESTER.

STAINED GLASS, MOSAIC, WATER GLASS, and other CHURCH MURAL DECORATIONS.
MR. PREEDY,
13, York-place, Baker-street, Portman square, London, W.

STAINED GLASS and WALL PAINTING
MESSRS. CLAYTON & BELL,
311, REGENT STREET, W.
Adjoining the Polytechnic Institution.

PURE SILVER LOOKING-GLASSES manufactured by NEW PROCESS.—Unequalled in brilliancy. Not liable to injury from damp, heat, or handling. EMBOSSED, ORNAMENTAL and BENT GLASS, SILVERED, at MODERATE RATES.
PATENT SILVERING COMPANY (LIMITED),
7, LOWER KENNINGTON LANE, S.

PAINTED DECORATION and STAINED GLASS.
CHARLES BLACKMORE,
37½, EUSTON-ROAD, LONDON, N.W.
Designs and Estimates submitted.

SOHO PLATE and GENERAL GLASS WAREHOUSE, 26, Soho-square, W. and George-yard, Crown-street, Soho, W.C.
ALFRED GOBLETT begs to inform Architects, Builders, and the Trade generally, that every description of Glass required for building purposes can be procured WHOLESALE, either in STOCK SIZES or CUT TO ORDER, at his extensive warehouses as above.
SPECIAL ESTIMATES for the supply of LARGE QUANTITIES of Glass upon the receipt of particulars.

PAINTED GLASS WINDOWS and MURAL DECORATION.
LAVERS & BARRAUD,
ENDELL STREET, BLOOMSBURY, LONDON, and 48, JOHN DALTON STREET, MANCHESTER.

GLASS.—W. H. JACKSON supplies BRITISH PLATE, PATENT PLATE, ROLLED PLATE, CROWN, SHEET, HORTICULTURAL, ORNAMENTAL, COLOURED, PHOTOGRAPHIC, and every description of Glass, of the best manufacture, at the lowest terms.
Lists of prices and estimates forwarded, on application at the Warehouse, 315, Oxford-street, W.

CRYSTAL WHITE SHEET GLASS.—WHOLESALE BRITISH and FOREIGN WINDOW GLASS WAREHOUSE.
British and Patent Plate, Crown, Sheet, Horticultural, Stained, Coloured, Ornamental, Ground, Fluted, Rough Plate, Photographic, and every description of Glass.
Estimates and Price-lists forwarded free on receipt of business card addressed to
R. METTAM & CO.
30 and 31, PRINCES STREET, SOHO, LONDON, W.

CROGGON and COMPANY, Manufacturers of
PATENT ASPHALTE ROOFING,
BOILER, RAILWAY, SHEATHING, and INODOROUS FELT,
For Damp Walls, and Lining Iron Houses.
DOWGATE HILL, London; and 2, GOREE PIAZZA, Liverpool.

TO BUILDERS, &c.
A LARGE ASSORTED STOCK always on HAND, of
CLOTHS and BAIZES,
In all widths, colours, and qualities, at
HILL & SONS, 83 and 85, St. Martin's-lane, Charing Cross.

KAMPTULICON FLOOR CLOTH.
DURABLE, COMFORTABLE, ECONOMICAL, and ORNAMENTAL, for CHURCHES, PUBLIC BUILDINGS, BILLIARD-ROOMS, and PRIVATE HOUSES.
GOUGH & BOYCE,
76, CANNON STREET WEST, E.C.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at

W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD, N.W.

OPPOSITE THE YORKSHIRE STINGO,

A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.

CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

ESTIMATES WILL MEET WITH PROMPT ATTENTION.

ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the

EMPORIUM, J. W. BIRD & CO.'s, 143½ and 145, EUSTON ROAD, N.W.

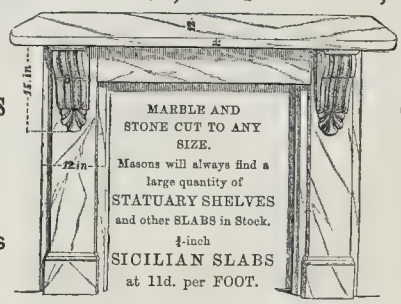
BOX STONE CHIMNEY PIECES for 5s. 6d.

Truss ditto ditto, 11s. 9d.

MONUMENTS AND TABLETS

in great variety, equally low in price.

MASONS' WORK OF ALL KINDS CONTRACTED FOR,



AND EXECUTED WITH DESPATCH IN TOWN OR COUNTRY.

A STOCK OF

500 CHIMNEY PIECES

always to choose from.

PRICE LIST ON APPLICATION.

MARBLE BOX CHIMNEY PIECE for £1 5s.

First-class Bed-room ditto, £1 10s.

FIRST-CLASS

TRUSS MARBLE CHIMNEY PIECES from £2 5s. to £3 5s.

A WELL-CARVED

STATUARY CHIMNEY PIECE,

with 13½-inch Piers,

suitable for a Drawing-room, which must be seen to be believed,

FOR THE SUM OF £6.

Net Prompt Cash.

PRICE LIST ON APPLICATION.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

THE LAND SECURITIES COMPANY

(Limited).
Capital, 2,000,000*l.*

DIRECTORS.

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Ennis, esq. M.P.
Sir James Ferguson, Bart. M.P.
Col. Fulke Southwell Greville, M.P.
Sir John Charles Dalrymple Hay, Bart. M.P.
Sir Laurence Palk, Bart. M.P.
Sir Henry Stracey, Bart. M.P.
William Duncan, esq.
Henry Farquhar, esq.
Sir John Gray.
John Horatio Lloyd, esq.
Hon. William Napier.
Hon. Henry Petre
Sir Charles Rich, Bart.
Granville Richard Ryder, esq.
Philip Twells, esq.

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, East End (4, Old Broad-street, E.C.), Office of International Financial Society

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security—

1st. Of landed estates, first-class house-property, and real property of all descriptions and tenures, and of all estates and interest therein

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private

Temporary advances will be made on landed estates, and on houses in course of erection, with or without the deposit of title deeds; and they undertake the negotiation of special investments.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S. W.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator for the admission of Pure Air.

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London.

TARPAULINS, MARQUEES, &c.

for SALE or HIRE.
SCAFFOLD AND HEMP ROPE FALLS.
H. PIGGOTT & SONS,
59, Bishopsgate-street Without, E.C. Manufacturer, by appointment, to Her Majesty's Honourable Board of Ordnance.

TO BUILDERS AND OTHERS.

TARPAULINS for COVERING WORKS.

SCAFFOLD AND HEMP ROPE FALLS.
AWNINGS FOR FOUNDATION STONES.
CARY & PRIER,
DE BEAUVOIR FACTORY, SOUTHGATE ROAD, N.

NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE.

SHOP SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE UNSIGHTLY AND DESTRUCTIVE SHUTTER BAR. Shops referred to in every public street in London. When ordering the above, send FINISHED THICKNESS of Shutters, and the way they go up.

Sold by all Ironmongers, and the Inventor,
GEORGE JENNINGS,
Engineering Depot, Palace Wharf, Stangate, Lambeth, S.

IMPORTANT TO BUILDERS.

is recommended to Engineers FOR IRON BRIDGES, INSIDE OF IRON SHIPS, BRICK VIADUCTS, and general Railway Work; also for FLAT ROOFS, FOOTWAYS, and BASEMENTS OF HOUSES

THORN & CO.
GROSVENOR ROAD, PIMLICO, WOOD PAVING MANUFACTURERS.

The Builder.

VOL. XXII.—No. 1120.

Memorial Tablets on London Houses.

E revert to a pleasant subject* —inscriptions in London streets, —such as are well merited, and will gratify the passer-by, with *shadows* of pleasant thoughts.

The Church of St. Mary Overy, or St. Saviour's, Southwark, might carry, at little cost, words to this effect :—

"In this Church,
and
Beneath nameless stones
lie the Remains
of
John Fletcher,
Poet,
(Beaumont's associate);
and of
Philip Massinger,
Poet,
Author of 'A New Way to Pay Old Debts.'
Fletcher died in 1625, of the Plague,
and
Massinger in 1638-9."

On an outer wall of the same church we should like to read :—

"In this Church of
St. Saviour, Southwark,
was buried,
31st Dec., 1607,
'With an afternoon's knell of the great bell,'
Edmund Shakspeare,
Player,
Younger brother of
William Shakspeare.
(England's myriad-minded Poet
was then a shareholder and actor
in
The Globe Theatre,
in this parish)."

This, on the little Church of St. Peter, in the Tower, would serve a good purpose :—

"Sir John Eliot,
of
Cornwall,
the fellow-labourer with
John Hampden and John Pym
in defence of
Liberty,
Died a Prisoner in this Garrison
in 1632, aged 42,
and
was buried, by command of
King Charles I.,
in this Chapel of
St. Peter ad Vincula.
The stone which covers his body is
uninscribed."

Shaftesbury House, in Aldersgate, should be made to carry :—

"In this House
(Inigo Jones, architect)
Lived and Caballed
Anthony Ashley Cooper,
Earl of Shaftesbury
and
Lord High Chancellor of England,
In the reign of
King Charles the Second."

* See p. 485, *ante*.

A church near to the Guildhall would "stay" many a "passenger" to read words "akin to these" :—

"In this Church of
St. Lawrence Jewry
(Sir Christopher Wren, architect),
Gilbert Burnet, Bishop of Salisbury,
Preached in 1694
The Funeral Sermon of
John Tillotson,
Archbishop of Canterbury.

In early life the great Tillotson
Was Tuesday Evening Lecturer in this Church."

This would arrest and deserve the attention of all who are wending "Eastward ho!" or "Westward ho!"—

"In the Font of this Church
of
St. Michael's, Cornhill,
Thomas Gray,
Author of
'An Elegy written in a Country Church-yard,'
Was Baptised in
The year 1716."

This, on No. 17, Gough-square, Fleet-street, would bring a debt of national gratitude to complete remembrance :—

"In a Garret
In this Square,
Samuel Johnson
Compiled
His famous Dictionary
of
The English Language."

This, in Silver-street, Golden-square, would please more artists than Mr. Clarkson Stanfield or Mr. David Roberts :—

"At Mr. Viggans', in this street,
Lived,
In the year 1752,
Antonio Canaletti,
The well-known Painter of 'Views of Venice.'"

The Poet Laureate, we are sure, would not be displeased at seeing a stone to this purport in Piccadilly :—

"In this Church of
St. James's, Westminster,
Lies buried,
Mark Akenside,
Author of the 'Pleasures of Imagination.'
Born 1721. Died 1770."

Mr. Macready, when in London, and in Great Marlborough-street, would bow with reverence to the house connected with the name of Mrs. Siddons :—

"Sarah Siddons,
In the height of her Fame
as
England's greatest Actress,
Lived in this House."

Baron Marochetti, again, would be pleased to be reminded of a great sculptor :—

"In this House,
No. 30, Lower Belgrave-place,
Sir Francis Chantrey,
Sculptor,
Died,
In the year 1841.
All his finest works
Were executed
Here."

Even an ancient Royal Academician would not grumble at seeing, on No. 30, Allsop-terrace, New-road, an inscription to John Martin :—

"In this House,
John Martin,
The painter and engraver of 'Belshazzar's Feast,'
And other noble works,
Lived for five-and-twenty years.
The gallery in which he worked
(At the rear of the house)
Is still to be seen.
He died, in 1854,
In the Isle of Man."

The late Right Hon. John Wilson Croker, were he alive, and in Savile-row, would have given a nod of approbation at reading,—

"In this room
(Of Set No. 1 E in the Albany)
Thomas Babington Macaulay,
Baron Macaulay,
Wrote the earlier half
of his
'History of England;'
And in
Set No 2 A,
Lord Byron
Wrote his poem of 'Lara.'"

We cannot conclude without renewing a hope and repeating a belief that something will be done,—and soon too,—in a matter that will be honourable to those who erect, and pleasant and suggestive to those who read.

THE THAMES EMBANKMENT.

The first stone of the Thames Embankment of the northern side, was laid on Wednesday last, by Mr. Thwaites, in the presence of the First Commissioner of Her Majesty's Works, and of Lord John Manners, and others, assembled on the concrete-bed and footings of a portion of the retaining-wall and sewer-construction, in a tight coffer-dam, at the depth of about 21 ft. below the level of high-water. The spot chosen for the formal commencement of the undertaking was in the line between Hungerford Bridge and Westminster Bridge, and not far from Whitehall-stairs. The work of the contract for one portion of the Embankment, in fact, commenced in the autumn of last year,—borings to ascertain the nature of the strata and foundation having been made by the engineer, some time previously; but that which has hitherto presented itself to view, including the greater part of the walling of iron caissons, belongs to the appliances of construction, and will form no part of the finished work above the bed of the river. When complete, the work generally will present above low-water line, a facing of granite, with a curved batter, surmounted by mouldings and a parapet-wall with a plinth and cornice, and with block-pedestals which are to carry standards for lamps and mooring-rings; whilst the line will be broken by the bridges, and by recesses for the steamboat-piers, and by landing-stairs at other points. Behind the wall will be the Low-level Sewer, which we last week described in the extremities of its course, and above it, a sub-way for water-pipes and telegraph-wires, though not for gas,—considered as dangerous. Further in the rear will come the railway joining Kensington and Brompton with the City and the east of London, and forming with the Metropolitan, the Inner Circle. The top of the Embankment and reclaimed ground will be appropriated partly as a roadway, 100 ft. wide, partly as recreation-ground, and partly for buildings; and the road will be connected with the present thoroughfares by new streets.

The greater number of the schemes for the embankment of the Thames have been directed to both sides of the river; the present work, however, deals first with the left bank. The two contracts which are in hand comprise the length between Westminster Bridge and the eastern limit of the Temple. For the space between the Temple and Blackfriars Bridge, power to proceed has been obtained, but the design is not absolutely decided upon; whilst eastward of Blackfriars Bridge, the idea of an embankment, even to Queenhithe, the point originally intended for the termination, seems to have been abandoned. The Embankment of the south side, which the Metropolitan Board have been from time to time blamed for neglecting, is, however, contemplated as to be undertaken ultimately throughout the length corresponding with the work on the left bank, and extending even farther down, so as to include Bankside, corresponding to Queenhithe, and a space below Southwark Bridge,

* We have pleasure in drawing attention to the following letter :—

Sir, The admirable suggestion contained in your paper, of marking, in a permanent manner, the residences of great men (why not of women too?) in London, cannot, I think, fail of being responded to.

In order to carry this suggestion into a practical use, it is evident that money must be forthcoming; and, as a beginning, I am authorised by a kind and liberal friend to inform you, that he is ready to subscribe twenty pounds towards this good work; and, should it be responded to, as I can have no doubt but that it will be, the money will be paid on an application from yourself, made to,—Yours, &c. Edward Jesse.

to the west side of St. Mary Overie Dock. Indeed, above Westminster Bridge, a considerable length of embankment is so far decided upon, that drawings will be ready in October next. Here, opposite the Houses of Parliament, will be the new St. Thomas's Hospital. On the same side of the river, the Embankment will eventually be continued to the railway company's property at the bridge near Battersea Park.

Thus, the grand comprehensive undertaking which has been the subject of so many schemes of the last thirty years, and of some more dating from the plan of Sir Christopher Wren, but to which little had been done except talking and planning,—or saving the line from Millbank to Chelsea,—seems likely to be accomplished in our time. In relation with the subject of metropolitan communications and the relief of the present overcrowded streets, and with the removal from the river, of objects which contribute largely to the unsightliness of London, the work of the Thames Embankment must be considered as the most important that has ever been commenced in this metropolis. These are not the only objects which the undertaking is to serve, and they are perhaps not those which have been at all times regarded as principal. But as to them, we may say, it gives some hope of ultimate due consideration of the solid advantages derived from decorative character in cities, to find that the appearance of the banks of the Thames is now deemed one of the matters requiring correction. Mr. Cowper, speaking on Wednesday last, rightly appreciated the architectural value, and scenic effect to be realized, of some works that London possesses. Whether more will be obtained than a convenient route, and an agreeable promenade with a view of a grand monument from either end, we will not discuss at present. Last year and this, when noticing the architectural drawings exhibited at the Royal Academy, we freely spoke of the short-comings, if not defects, decoratively, of the designs for some of the accessories of the Embankment. But as to the buildings bordering the roadway and open spaces, it would be much to be regretted should the usual result of leasing ground attend the completion of the undertaking, instead of the result as seen in the really good and improving architecture of buildings of the City of London, where the sites are mostly freehold.

Before entering upon a description to be given hereafter, of the design and structural features of the work now in progress, it may be well to give some particulars of the objects sought to be obtained in embanking the Thames, of different schemes that have been proposed, with alternating principles, and of the general aim, and the principles accepted, in the undertaking of the Metropolitan Board.

The first object, sought in what we may call the historic period, to be attained by embanking the river, was the improvement of the navigation. With this has been joined, the removal or obliteration of the unsightly and otherwise offensive mud-banks. Nearly all who have considered the subject, have held that these objects were to be realized by contracting the water-way where the river widens, as opposite the Adelphi, to the width of the narrow part, as at Southwark Bridge. Thus, it is said, shoals would not be formed; there would be ample depth at high-water alongside a quay; whilst the scour would be increased; and, that way, the river-bed would be lowered. Attention has been directed to the shoal at Waterloo Bridge, visible on the Surrey side at low water; and some of the authorities, Mr. Bazalgette included, would say that the Embankment on the Middlesex side, should occupy in width, the space of two arches of the bridge, in order that the strength of the current should not take a course far from the Surrey side as at present. Opinions have differed only as to the necessity for storage of water of the up-flow, in order that the maximum of down-scour be obtained. Take away the present storage, some say, such as that in the wide portion of the river just now spoken of; and the Pool, below bridge, will silt up. The provision of a thoroughfare has just been adverted to. A route of ample width between the two extremities of London has long been demanded. Every month increases the need of it, but at the same time heightens the cost and difficulty of the formation, whether by widening an old route, or forming a new one that would entail destruction of buildings. The Thames is already a water-highway of value; but it is improvable by provision of better access: the Embankment will afford the means, and will add a route for carriages in an important division of the line from Westminster to the Bank. And to the space for an ordinary carriageway, the Embankment adds that for a railway. The Embankment, again,—or as in some of the propositions, the foreshore,—affords space for a sewer to intercept the sewage at the mouths of numerous old channels now discharging into the river. Further, when all these objects have been attained, the ground reclaimed or gained from the river, is of great extent; and, placed as it is about the exact centre of the metropolis, it would be most valuable, laid out for purposes of recreation, or appropriated for important public buildings that have been long needing sites. The object of improving the appearance of the river we have already adverted to.

The great difficulty in the way of all propositions was the value of the river-side property. Even supposing the money in hand to purchase all rights, it was deemed essential to the existence of London that wharfs and warehouses should line the river at high-water, and that barges should be able to approach the wharfs, and settle down on the mud, as the tide fell, where they might be laden or unladen by the help of cranes. To this it was at one time answered that the warehouses might be separated from the river by the roadway, and the goods be wheeled across without much difficulty, after the method said not to be found inconvenient at Dublin. Designs were made preserving the water-frontage for the warehouses, so as still to allow of craning, and getting the roadway below them. Generally, however, designs for the Embankment endeavoured to provide a substitute for the water-frontage, by docks. These docks, according to some designs, would have increased the water-frontage. However, they might have been difficult of access without some slight obstruction to the navigation; and they would have seriously interfered with some of the most important objects of the Embankment. Bridges would have become necessary; and, for the straw-barges or other vessels with high loads, those bridges would have been required made to open; and the sewer in the Embankment would have been impossible. Refuse and mud would have been liable to accumulate in the docks. The existing docks and inlets have been several times reported upon as nuisances. Truly, docks might have served the object of storage of water, supposing the view as to such storage, to secure the most complete down-scour, to be important. The railway would have been unobtainable.

Before such difficulties of the water-side as have been adverted to, the Metropolitan Board of Works itself has recoiled, at least as regards the portion of the river eastward of Blackfriars Bridge. But there the river-side course for the thoroughfare was not indispensable; and the line of street, the sewer, and the railway, could together go with some advantage in a different direction. On the other hand, the Metropolitan Board, assuming that the coal trade was that chiefly provided for, between Blackfriars and Westminster, have come to the conclusion that the supply of coals by way of the Thames is not essential, now that the railways carry much coal; and they have consequently adopted the solid embankment, clearing off thus some of the chief impediments to the undertaking, securing every advantage of the roadway, railway, sewer, and reclaimed ground; and leaving only as a question, that of storage, to which it has been lately said their sewerage works, intercepting or abstracting a considerable quantity of water from the river, have given new importance.

The construction of embankments to the estuary and stream of the Thames began long before the period of authentic history. We have only to follow the course of the river on either bank, to see that a great engineering work was at some time in progress for the reclamation of immense areas of land, above the level of which the tide now rises, but which it is prevented from submerging. Moreover, scarcely any excavation is made for an important building in Thames-street, that does not disclose the remains of several lines of embankment of different periods. The first plan that we are acquainted with, is that of Sir Christopher Wren; but it was not proceeded with, and since his time there have been numerous detached embankments, merely irregular encroachments upon the stream. There was a considerable projection, from Whitefriars and the Temple, into the river, made in connexion with Blackfriars Bridge in 1767; there was an embankment for the Adelphi in 1770; there was one for Waterloo Bridge in 1814, taking the line of the previous one for Somerset House; there was one at Hungerford Market and there was that for the New Houses of Parliament. But the absence of uniformity in these was the source of evil rather than benefit. It is by no means certain, that the chief difficulty of continuing a line of quay to London Bridge, is not caused by illegal encroachments; and the Metropolitan Board might do well to look into the matter.

One of the first within present recollection who produced a defined scheme for the Embankment, combined with other objects now in view was the late Mr. John Martin, the painter. He proposed to embank both sides of the river, and to place a sewer of interception under the Embankment. One of his schemes for the interception of sewage dates as early as 1827 or 1828. He was at work upon the same subject in 1832, and following year; and in 1834, his designs appeared in a Parliamentary report on the sewers of the metropolis. In 1836, efforts were made by a committee, to get the design for the Thames improvement carried into effect, and Martin published engravings showing a sewer-quay and colonnaded wharfs, and a railway. In 1838, in 1842, and in 1843; and in each year from 1845 to 1850, some publication of his scheme was made at his own cost, or by a commission or committee on Metropolitan Improvements. A suggestion by Lord John Manners, that the streets now about to be made, should bear the names of the pioneers in this work of the Embankment, will, we hope, be taken. Amongst the number of such men was the late Sir Frederick Trench. He, if we remember rightly, proposed a railway, but above ground. On the 23rd of November, 1842, was appointed a very important commission, at the head of which was the Earl of Lincoln, now Duke of Newcastle; and of which Sir Robert Smirke, and Sir Charles (then Mr.) Barry were members. Mr. Thomas Page had been previously at work taking soundings of the river, and comparing them with previous soundings. Designs by him, Mr. Martin, Sir Frederick Trench, Mr. Barry, and Messrs. Walker & Burges, were considered; and most of them appear in the report, which was printed in 1844, and is a production of permanent interest and value. Mr. Page contributed to it very largely, and so as to well justify the application to him of the words of the chairman of the Commission of 1861, that he thoroughly understood "all these matters," "having had more to do with the river than almost any man living." Now it is at least important to notice that Mr. Page has always maintained the necessity for storage of up-tidal water in order to get sufficient down-scour to prevent deposit, as in the Pool; that his plan adopted by the Commission of 1844, provided large areas of water, or so that it was described by a commissioner, Mr. Gally Knight, as one for "a road in a river;" and that the Commission of 1861, before whom his view still was maintained, said in the course of their report,—"If at any future time any effect should be produced on the river from the diminution of its capacity for tidal water, by reason of the embankment, arrangements may be made higher up the river by dredging, or by a tidal reservoir to compensate for the loss." But they said,—"The consideration, however, of this matter would naturally devolve on the Conservators of the River Thames." This report came in the year following that in which a committee of the House of Commons (itself following those of previous years on Metropolitan Communications) received evidence tending to show that the Embankment should be continued from Westminster Bridge to Blackfriars Bridge. The Commission of 1861 was appointed consequent upon a certain agitation caused by the appearance of hoardings in the Strand, where Mr. Bazalgette, obliged to contemplate that line as possible for the sewer, was busy with preliminary examination of the strata. The Commission, following a precedent of the Parliamentary Committee, advertised for designs. More than fifty were presented. The majority of the plans included docks; but some few proposed a solid embankment. Amongst the latter was a design by Mr. Shields (of which we gave some illustration soon afterwards), and which was adopted by the Commission as the basis of their recommendations. The plan of Messrs. Walker & Burges before referred to, was mainly for a solid embankment. The report of this commission recommended a new street from Blackfriars Bridge, across Cannon-street to the Mansion House; and, between the former point and the eastern side of the Temple, a viaduct on piers of masonry, leaving a water-way for the convenience of the City Gas-works and the ad-

ving wharfs. Amongst the other recommen-tions, was one "that a uniform low-water annel of 6 ft. in depth at ordinary spring es, and 500 ft. in width from the embank-nt wall be secured, and thus the stream be re equalised in velocity." In this year, the t was passed, which created funds for the nbankment, by continuing the coal and wtne dies to 1872. In the following year there was committee of the House of Commons on the nbankment; and the question of the inter-tion of carriage traffic from the Embank-nt where in front of the ground leased by e Duke of Buccleuch and others from the own, was at length decided in favour of having e carriage-way, as well as footway, all the way Westminster Bridge. The discussion was liminary to "The Thames Embankment Act, 62," which received the Royal assent on gust 7th. In the course of the debate, Mr. wper admitted that "in a sanitary point of w it would be desirable to get rid of the gas-rks." The Bill, however, passed with a con-lerable number of provisoes, which we fear re of a nature to reduce the advantage to be pected from the Embankment.

Upon the Act of 1862, and the Government uarantee through which money has been raised a reduced percentage, the undertaking is now active progress; and we shall give shortly, rther particulars of the plan, and minute de-ription of the structural details.

TESTING HYDRAULIC TESTING MACHINES.

Mr. F. A. Paget, C.E., writes:—The necessity r testing iron structures and details may be id to have been long recognised. Although any questions in the science of the strength of aterials are still in an unsettled state, there is ttle doubt that no chain cable, or anchor, or rder, or topsail chain, or pit-chain, or pit wire-pe, &c., should be trusted with human life efore having been tested up to what engineers ave recognised to be proof strength. The ope-ation is, however, one of an extremely delicate naracter. While, on the one hand, we are bound o carry the test as far as possible, in order to equire as much certainty as possible, we are on he other also bound to keep within certain irict limits, to exceed which would be to injure he structure. If, again, we wish to test a bar, r a riveted joint, or a length of wire, or a chain, r a submarine electric cable, to destruction, in rder to arrive at its ultimate power of resistance, is clear that in such cases also, the utmost ccuracy in the measurement of the applied stress s required—at least if any reliance is to be laced on the results. These operations are of ecessity carried out by means of the hydraulic ress, and it is therefore of great importance to now the best means of measuring the useful ffort exerted by the press plunger. A few eeks ago you did me the honour to quote a ortion of my memoir "On the Testing of Chain Cables," in which I also investigated this parti-ular question. I was not then aware that cer-ain very defective means of measuring the real ffort exerted by the press were so very com-non, and perhaps you will now permit me to dwell at some length on a matter which all ractical engineers will acknowledge to be of the utmost importance.

The application, by Bramah, of the self-ightening or self-adjusting principle to the acking of the hydraulic press may be said to have first brought Pascal's hydrostatic paradox within the domain of practical science. As carried out in Bramah's press of 1796 (a piece of exquisite workmanship now in the Kensington Museum), this principle appears in the shape of a leather-packed, self-tightening, piston or bucket. It was only some years after-wards that the late Benjamin Hick, of Bolton, invented the elegant self-tightening collar, consisting of a cupped leather caused to grip the outside circumference of the ram by means of the pressure of the water itself. The much greater difficulty in keeping a water-tight joint than a steam-tight joint, even at low pressures,—a difficulty doubtless due to the power of capillary attraction,—is well known to all engineers; and when behind this subtle force is working the brute force of perhaps several tons to the square inch, it is clear that the self-tightening principle is the only one practicable with the practical requirements of the manifold adaptations of the hydraulic press. The expectation that this friction at the packings should not increase with the hydraulic pressure can only result from a complete oversight of the construction of the hydraulic press. In all machines there is necessarily a loss of useful effect, but with the hydraulic press that loss increases with the pressure of the water. The only *direct* experiments that have been published on the friction of the hydraulic press are those of Professor Rankine. The distinguished past President of the Society of Engineers in Scotland, and Messrs. More, of Glasgow, found that "the friction between a plunger and its collar is about one-tenth of the total effort of the water on the plunger,—at all events, something between 1-9th and 1-11th." Dr. Rankine, in fact, approximately estimates the loss by friction at about one-tenth of the gross load. General Morin found that with leather on cast-iron the ratio of the friction of quiescence to the pressure was, when the surfaces were lubricated, 0·12; when dry, 0·28; and when wet, 0·38. The peculiar faculty possessed by leather for adhesion under pressure is familiarly shown in the boy's plaything of the leather "sucker." After having been for some time in motion, the ratio of the friction to the pressure of leather on cast-iron or brass was no less than 0·56 when the surfaces were dry; 0·36 when the surfaces were wetted 0·23 when wetted and greasy; and 0·15 when covered with oil. Morin gives 0·36 for a wet, but not lubricated, pump-bucket packing; and 0·29 when lubricated. These co-efficients, however, were obtained with metallic surfaces in a good state; and it is clear that the friction will vary with the same cylinder and the same packing according to their respective and mutually influencing states. Corrosive water would thus naturally deteriorate the surfaces, and lead to an increase of the friction. Doubtless these reasons further the appearance sometimes noticed on the ram of a press, of small bits of leather sticking to the cast-iron surface. Engineers in France and Germany generally take the useful effort of the ram of the hydraulic press at 0·80 or 0·85 of the gross load on the plunger. The distinguishing feature of the matter is, however, that the friction will vary,—1. With the construction of the press, and the more or less surface of the packing,—less of the *push* of a solid plunger, and more of the *pull* of a leather-packed piston and collar would be consumed in friction; 2, the friction will vary with the state of the lubrication; 3, with the state of the metallic surfaces; and, 4, in some cases with the work being done by the press. The down-pull caused by the weight of a very long length of cable, for instance, will increase the side friction of a horizontal piston-rod. The only thing certain is, that the effort of the press will be less than the gross load on the piston.

It is therefore clear that *a metallic gauge, or graduated lever and weight*, placed in communication with the water, could not be with any security adjusted to any assumed amount of friction. Of course, if placed in communication with the cylinder without any such allowance, as is often done, for the loss by friction, the indications are then 10 per cent. less than the real effect, according to Rankine, and still less, according to Morin. But metallic gauges, especially when registering high pressures of perhaps several tons to the square inch, are never quite to be trusted. When Dr. Fairbairn, in 1858, conducted his experiments on the resistance of tubes to collapse, he used two metallic gauges to register the water-pressure, and besides checked these results by means of a delicate safety-valve and graduated lever. It is, in fact, only as a check that a graduated lever should be used. Denis Papin never intended that his safety-valve and lever should be used as indicators of fluid-pressure at any given moment, but rather as a boundary line which must not be overstepped by a certain given pressure. Five minutes spent on the foot-board of a locomotive will show the difference between the indications of the safety-valves and the steam gauge. When the driver wishes to ascertain the pressure from the safety-valves, he must by a tap overcome the inertia of the lever, of the valve and their appurtenances, the friction of quiescence at the joints, and any adhesion at the metallic surfaces of the valve and seating. In the case of the hydraulic press, it is clear that a hair's-breadth of error in calculating the relative areas of the valve and the plunger will be very considerably multiplied. The use of a conical valve is, in any case, simply a farce, as hundreds can testify, for the water insinuates itself between the surfaces. Loading a valve by means of either a spring or a weight has in either case its peculiar objections. The mere lifting of the lever, for instance, at once increases the resistance of the spring. Quite independently of the friction of the press, the indication of its real pull will thus vary according to:—1, Whether these indications be taken from the graduated lever on the pressure gauge; 2, with the respective mechanical states, more or less subject to variation, in which these apparatus may happen to be. And these assumptions are founded on an initial accuracy of proportion and workmanship which is not always obtained.

But when, in addition to these influences so adverse to an accurate measurement of the real pull or push, the water, intended to give motion to the indicating plunger or valve, kept down by a weighted lever, is conveyed through a pipe of more or less length and of greater or less diameter, a fresh set of phenomena will affect the indications, and to an extent that renders the operations of testing(!) a mere groping in the dark. I have, *mirabile dictu*, seen the fictitious indications of large hydraulic testing machines thus conveyed to a ¾-inch indicating plunger several fathoms distant by means of a copper pipe only half an inch in diameter outside. The loss of head under such circumstances (as shown in the numberless careful experiments conducted by such men as Coulomb, Couplet, Bossut, Dubuat, De Prony, Darcy, Neville, Eytelwein, and Weisbach) is something very great; and in some hydraulic testing machines of this kind, the pressure of the water is diminished by more than 20 per cent., through loss of head in the pipe, before the water reaches the indicating valve. The loss through friction and adhesion to the sides of the pipe will be directly as its length, and inversely as its diameter; this resistance will increase with the square of the speed, or, according to Weisbach, at a rather quicker rate than the square of the velocity. Every bend, of which there must be necessarily several in a case of this kind, will increase the resistance, and this action will also be furthered by the loss at the outlet into the pipe, and still more at the enlargement at the valve. As the loss of head in the flow of water is independent of the pressure, the indications of small amount will be proportionately more affected. All these laws have been, of course, long known to science, and their results could be pretty accurately calculated for any given case. But we may remind ourselves that within late years, M. Darcy, *Inspecteur Général des Ponts et Chaussées*, while confirming most of the results of previous experiments, has shown, as a result of no less than 198 experiments, that the flow of water through pipes is very powerfully influenced by the nature and state of the surfaces. Darcy has thus proved that, while the loss of head in a wrought-iron tarred pipe could be represented by 1, that in a new cast-iron pipe is 1·5, and in an encrusted pipe as much as 3. Most waters have some deposit, and thus—even supposing that the diameter be not reduced, or that the incrustation be not very rough—the indicator would be more and more affected as the pipes got older. Variability and uncertainty are in this case also the distinguishing features. Any air in the pipe would greatly affect the flow of the water, and consequently the indications; and the results are indeed liable to be affected by several other accidental circumstances. No wonder, therefore, that the difference of results between two machines, in one of which the pull is measured by a series of levers, while in the other it is measured by the plan I have just described, is as much as 10, 15, or 20 per cent., as I can prove by private documents now in my possession.

The only means of measuring the effort exerted by the plunger is that adopted in the press now in the Kensington Museum, made by Bramah nearly seventy years ago; the plan recommended by Professors P. Barlow and Dr. Rankine; by Mr. Bowman, Mr. Lenox, and Mr. Macdonald, before the Chain-cable and Anchor Committee of 1860; and adopted for more than thirty years by the Admiralty at all the Royal dockyards, and by Messrs. Bown and Lenox. This plan simply consists in measuring the pull by means of a weighing-machine, or combination of balanced levers turning on knife-edges.

Railways through London.—The London and North-Western Railway is to be extended, by means of a separate company, from Euston-square to Charing-cross, where it will join the South-Eastern line, and thus we shall have another line through London.

KENSAL GREEN CEMETERY.

A HANDSOME CROSS, on the model of the early graveyard crosses of Ireland, has been erected "to the precious memory" of the late Major H. W. Paget and his son. It is about 9 ft. in height, of Sicilian marble, and is covered with a great variety of knot-work and interlacings. In the centre of the cross is a well-executed bas-relief of Christ and Mary in the garden, after the Resurrection, at the moment when ("she supposing him to be the gardener") he said unto her, "Mary!" and she turns, and exclaims, "Rabboni." The arms of the cross are filled with oak-leaves, acorns, and lilies. It should be looked for when visiting the cemetery. A stroll there, we may add, is seldom taken without advantage. To say nothing of the assertion that a grave, wherever found, preaches a pithy sermon to the soul; or the fact that every dozen steps show a name that has been heard of and recalls a career; there may now often be seen, amongst the mass of ugliness around, "the stone-quarry above ground,"—a work of art, or, at any rate, an approach to it.

At a very short distance from the Cross,—on which, by the way, the name of the sculptor does not appear,—a triangular marble pedestal the work of Mr. Noble, has been recently set up in memory of Lieutenant-General Fiddes and Lieutenant George Pauli, and which bears three medallion heads, very well executed, especially that of Lieutenant Pauli. The form of the upper part of the monument, a lengthened finial, is less pleasing. Some lovely flowers fill the front area, and show continuing care. Coming to this pedestal (the tombs of Rendel, Catherine Hayes, and others noteworthy, close by), the monument of Catherine, Duchess Dowager of Leeds, not a new one, will be seen literally shrouded with a lovely mass of jessamine and clematis. A small marble cross to Harold d'Doigne Hearsay, five months old, put up only a few weeks ago, has in low relief, on the upper part, the figure of an angel bearing up a child, and on the foot of the cross the representation of a too large lily in bloom. The figures show good feeling.

The most important, however, of the later monuments, as involving the exercise of a higher art, is one, still in the same part of the ground, erected in memory of the Gardner family. This was designed by Mr. Alfred Beaumont, architect, and executed by Messrs. Purves & Norton, successors to poor John Thomas, the sculptor. It includes two life-size figures of angels in Sicilian marble: one a veiled figure extinguishing a torch, intended, perhaps, to typify Death; the other bearing a palm-branch, and with upraised hand pointing to the dove that surmounts the whole composition, suggesting Immortality. The pedestal, richly ornamented, is of polished red granite and white marble. It is to be regretted that a little more room was not given to this work. Every inch of ground here, however, is being rendered available:—

"How populous! how vital is the grave!"

If, as we firmly believe, nothing dies but something mourns, what an amount of sorrow and anguish does this densely packed "God's Acre" represent! You may see the very tears on many of the tombstones. On one a father exclaims, "*My poor child*" and on another, the loving parents of a darling born on the 24th of June, and too soon removed, sigh out,—

"*Dear Midsummer Day rose-bud.*"

But patience, ye who weep! patience for a short, short time,—

"And Death, that swallows all, shall be
Swallow'd himself in Victory!"

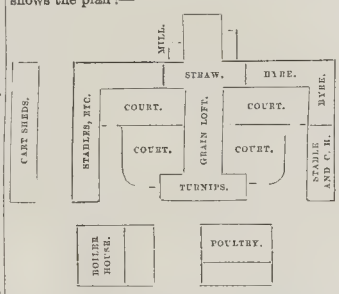
THE CISTERCIAN MONASTERY OF CASAMARI.

ONE of the most ancient and interesting sanctuaries in the Roman states, which was maltreated on a late occasion, though within the guaranteed territory of the Church, is the Cistercian, or, rather, Trappist, monastery of Casamari, within a few hours' expedition, on foot or horseback, from Frosinone, and but two miles distant from the Neapolitan frontier. Little known and still less visited by the tourist, this cloisteral home well deserves the attention of those to whom sacred architecture or monastic story is interesting; and amidst the well-nigh total extinction of all art informed by the Mediæval spirit in the district of Rome, such a monastery stands an almost unique example, still, happily, intact, presenting, in the grave simplicity of its olden characteristics, a monumental protest against the corruption of taste, the generally secular style in sacred buildings, and the preference for the sumptuous rather than the nobly beautiful, deplorably manifest at the Papal metropolis, and more or less so throughout those provinces still left under her sway.

Casamari takes its name from the villa of Caius Marius, whose ruins, consisting of reticulated masonry, arcades and columns of Pæstan Doric, remained conspicuous on that spot till the earlier years of the last century. An ancient Roman bridge of one arch crosses a narrow stream, the Amaseno, close to the cloisteral enclosure; and an aqueduct, supposed to be Roman, still exists in several arcades, supplying water to its inmates. Amongst those classic ruins arose, in the year 1005, a hermitage, inhabited by four priests,—who had retired from the neighbouring town of Veroli, to lead a life then deemed the summit of Christian perfection,—and here built a chapel, dedicated to SS. John and Paul, two canonized members of the Orsini family. After about thirty years, several, from the ranks both of laity and clergy, joined, and placed themselves under direction of these hermit priests, the fame of whose sanctity had now become widely spread; and in the sequel was formed a community, bound to the usual vows under a religious rule borrowed from the Benedictine: the black habit of that more ancient order was assumed: a "prior-abbot" was appointed by the superior of the nearest Benedictine monastery (at Sora, within the Neapolitan frontier); and the monks of Casamari were Benedictines before they became Cistercians. In 1045 the primitive church, raised by the first hermits, was enlarged, with embellishments, windows of stained glass, and a tower supplied with eight bells. But soon followed the usual vicissitudes,—that phase of monastic history, sooner or later, supervening in the annals of almost all such institutions,—the period of decline and disorders. In 1149, Pope Eugenius III., when visiting these cloisters, found them all but deserted, and partly in ruin; the few monks still on the premises no longer living in observance of their rule. Wisely, therefore, did that pontiff determine to eradicate and reform; and well did he choose such an energetic agent as St. Bernard for the task of re-organizing another community here, under an abbot appointed by the holy man himself, after the expulsion of those unworthy subjects. Within a few years afterwards, namely, in 1181, these cloisters contained a family of more than 300 monks, under the government of an abbot, John, fourth of that name, who was sent as legate by Innocent III. to the kings of France and England; and in 1217 a new church (the still extant edifice), surpassing the older in magnificence, was consecrated by Pope Honorius III., all the cardinals and Roman Curia assisting, and entertained at the monastery, upon whose premises more than 1,000 horses were stalled during this illustrious visitation. At later periods imperial guests, Frederick II. and his empress, also partook of hospitality here, and all the family of the Hohenstaufen were, on this occasion, 1221, inscribed among "spiritual children of Casamari." But days of trial ensued: in 1406 the monks had to fly before the invading troops of Ladislaus, the profligate Neopolitan king; and in 1417 one Jacopo Caldoro encamped on the premises, fortified their buildings, sustained here a siege and was eventually put to flight, not perhaps without damage to the edifice, by another leader, the head of the Sforza family. Soon afterwards, the community having become insignificant, and the property in greater part usurped by seculars, the rest ill-administered, Pope Martin V. determined to place both the monastery and its abbatial government *in commendam*; and the first abbot commendator, no longer bound to residence, was that Pope's nephew, Cardinal Colonna. In 1463, Pius II. restored the property to its former administrators; but in 1472 their abbot voluntarily resigned it to Sixtus IV., in lieu of an income of 300 gold florins per annum. So rapidly did the establishment thenceforth decline, that, in 1503, a prior and *one* monk were the sole inmates left in these buildings. The *cloisteral* abbacy for a time maintained, even while the economic government was exercised by another non-resident superior, was finally suppressed, giving place to the humbler office of a priorate; but in 1663 was restored the ancient dignity of abbot; and its thirtieth representative was elected to preside, not as formerly, for life, but for eight years. In 1705, Cardinal Albani removed the Cistercian community, now dwindled to only eight individuals, and invited the Trappists to succeed them. Thus did these cloisters for the third time receive a new appropriation, becoming the only Trappist monastery in these states, under a superior elected for life. That reformed Cistercian order continued to flourish here till, at the close of the last century, the storm of revolution burst over these cloisters with the usual disastrous results. In 1799, six of the community were murdered by the French troops on their march from Naples; then were all portable valuables seized and carried away; the contents of the library dispersed; oil-casks and wine-barrels tapped and left leaking; sacred vessels robbed; the altar-tabernacle broken open, and all this by soldiers who had been courteously received and hospitably entertained for three days by their victims! Finally, in 1811, the monastery was suppressed by the French Government; its premises let to private families; and its library transferred to the next town, Veroli. But three years subsequently a decree of Pius VII. restored Casamari to Trappist Cistercians; and, in 1850, Pius IX. re-endowed it with all its property, hitherto held *in commendam* within the Roman states, under the sole obligation of an annual subvention, 1,200 scudi, to the chapter of St. Maria Maggiore. During late years the monastic family here has averaged forty, including novices and lay brothers. Several efforts have been made, but in vain, to re-obtain for their archives a voluminous parchment code, now in the Vatican library, containing all the registered privileges, deeds, and titles of the monastic property, &c.; the whole compiled and brought to a close in 1490, by one of the industrious brethren here an inmate. In part, but not without many deficiencies, the dispersed library has been restored; but the archives are for ever lost. During the revolution of 1848-9, this community remained exempt from all serious disturbances; but the last outrage suffered, at the hands of regular troops fighting under the banners of a Catholic government, was, if less sanguinary, not less violent, than any other to which these cloisters have been subjected in the stormy past.

Casamari does not stand amidst scenes of wild grandeur or romantic solitude, but presents a pleasing aspect. Its ample buildings seem the home of peace and modest prosperity; while the olden dignity of the church and cloisters adds the religious character to an exterior insignificant in its more modern features. Just before reaching its outer gate, we cross the ancient one-arched bridge (over a narrow stream), of good masonry, and the aqueduct, with arcades, irregular in form and unlike those of the ancient Romans, though ascribed to their work. Before reaching the inhabited and restored portion, we pass through two quadrangles of the ancient buildings, one wing bearing marks of fire on its roofless structure; another now serving as a granary. The outer porch is Gothic, with good details; above its archway rising an attic (once the quarters of the cellarer and porter) adorned by an arcade-course. Hence through the round-arched gateway, we have a view of acute arches receding beyond with fine perspective effect. The church, opening on an inner quadrangle, has an atrium, with a central arch, rounded, and lateral ones, acute in form, fine mouldings and symbolic reliefs on the tympanum of its doorway. The modern monastic buildings are in a style utterly insignificant, and without character. Arriving with a fellow-traveller, we had to wait a while and parley with the lay brother who received us, and had first to communicate with the abbot, before bringing word that we should be very welcome to remain till the next day,—a preliminary not usual in the arrangements of monastic hospitalities, but here necessitated by exceptional, and (particularly at the time of our visit) distressful circumstances; notwithstanding which the attentions shown us were all that could be desired. We found a community consisting of forty religious, four being novices,—who, in strict observance of their rule, lead a life dedicated to studies and devotions. Their food is exclusively meagre, excepting for some part of the winter-season. They rise for office in choir at two after midnight. Their novitiate lasts for a year at least, or longer according to the judgment of the superior; and during that period of probation, are made all the requisite studies,—rhetoric, philosophy, and theology. The fathers hear the confessions of seculars, and preach at least one short sermon

every Sunday morning. The earliest daily mass begins at 4½ a.m.; and one service every evening is the office of *Complines*, with the *Salve Regina*, sung to solemn music.



After making acquaintance with the "Master of Novices," and being assured of welcome, we were presented to the Father Abbot, a little fragile-looking old man, who received us with courtesy; answering all questions with readiness, asking no questions of us, his guests, and most obligingly conducting us over the principal portions of the premises — cloisters, chapter-house, and church. The cloisters are a genuine and intact specimen of the style prevailing, though less in these provinces than elsewhere, in the thirteenth century; not, indeed, with the richly-elaborate details of the Ostian St. Paul's, or the Lateran cloisters, but more severe in simplicity, with triple arcades supported by light colonnettes, spiral or fluted, single or coupled; a character of massiveness and gloom, a twilight solemnity distinguishing this enclosure. The chapter-house has still more of the same severe and imposing religious aspect, — its interior an ample quadrangle, lighted from the cloisters by narrow acute-arched windows; divided into three naves by clustering columns, or rather piers, with folial capitals, the vaulted ceiling divided into bays, with intersecting ribs. Here the monks meet every evening, after vespers, for conferences or reading. We shall not forget the first impressions received from the church, so fortunately preserved alike from despoilers and the tasteless efforts of pseudo-restoration, so harmonious in its simplicity, its general expression of repose, and the grace of its forms. A cruciform edifice, it has the central nave and two aisles, transepts and apsidal choir beyond an isolated high altar; the vaulting groined, and in several bays. The nave and aisles are divided by fourteen acute arches with clustering columns, which rise as high as the springings of the vault; the whole edifice having fifty-four windows of corresponding style, on two stories, but all those on the lower range now closed. An attic, above the arcades, is quite plain, except in a series of pointed niches that correspond to the archways, presenting a feature like a very simple description of triforium. The windows are of five lights, and lancet in form, except those over the chief portal, in the tribune, and at the transept extremities, all which are wheel windows, with appropriate tracery. Ranking as a basilica, this church measures, in its entire length, 269 palms; in that of the transepts, 150 palms; the nave, 42 palms; the transepts, 30½ palms in width; height of interior, 88 palms; and the whole is built in native stone, of a pleasing yellowish-grey tint. The only objects decidedly out of keeping are the high altar and its canopied baldacchino, in the sumptuous modern Italian style, richly inlaid with coloured marbles,—a novelty due to the Cardinal Albani, who was abbot-commendator, and a liberal benefactor of Casamari in the early years of the last century. Besides that altar there are six others, in lateral chapels off the transepts; but none are in the body of the church, which, therefore, gains in simplicity and breadth of effect. From its nave the sanctuary is divided by iron screen-work, in style suitable to that Mediæval architecture — a judicious improvement, substituted by the present abbot for the tasteless *cancella* erected here in the seventeenth century. The abbot mentioned several other improvements he had projected, as the introduction of stained glass in the windows, and the reopening of those long since built up; but adverse circumstances had frustrated all these good intentions.

In the afternoon we were conducted over the rest of the premises, by the "Master of Novices," an intelligent and obliging *padre*, who was our companion during many hours, and sat with us at the dinner-table, though not to eat or drink. The ancient refectory and dormitory are fine examples of the Mediæval style. A spacious hall, divided into two equal compartments, by seven massive piers, with very high stilted arches that support a ribbed vaulting (in the same grey stone as the church and cloisters), was the olden refectory, where 300 monks sat at the well-spread tables. This serves now as a granary, and above is utilized as a hay-loft what once was the dormitory, a long low room, under a ribbed and vaulted roof. Another ground-floor story, under these two, contains the enormous square basements, in goodstone work, of the columns (or piers), supporting the arcades in the refectory above; and a different section of the same wing, now a magazine for garden tools and implements, is traversed by another massive arcade, passing through the centre of this building, obviously of the same period, but different in details of architecture from the other portion. The structures seem to have suffered by the action of fire; and the church's belfry, one of the best external features, has been reduced in height, and deprived of its spire, by lightning.

NEW FARM-STEADING, WESTFIELD, SCOTLAND.

THE estate of Westfield, in the parish of Spynie, has several points of interest;—its position, long since, on the borders of the once noble Loch of Spynie; its connexion with the bishops of Moray at a remote period; its being owned by Randolph in the fourteenth century, and thus brought within a step of royalty. The long line of noble proprietors to whom it afterwards belonged, and a period of 400 years between the two heiresses "Black Agnes" and "Janet," awaken many reflections. It has not, and never had, any baronial residence situate on its fertile plains. And yet how many castles now in ruins are associated with it!

The new steading is built on the site of the former one, but occupies a good deal more ground. The buildings are in the form of nearly a complete square, except where broken by the entrance to the courts in front, and where the thrashing-mill juts into the stackyard behind, and the inclosed court is divided into two by the cattle-sheds, with grain-loft over. Such is the steading proper; but besides, on the south-west side are the cart and implement sheds, and in front a poultry and boiler house. The following shows the plan:—

Beginning at the back end on south-west of thrashing-mill, is the grieve's store, fitted with pegs, shelves, and hooks; then the hay-house, with a high door for putting in the hay, and communicating with the stable inside. Passing outside a loose box and the harness-room, and turning the corner, we have the farm stable wing, 125 feet long, including harness-room at the angle, which is fitted up for eleven horses. It contains, also, men's sleeping-room, with large glazed windows for overlooking the horses, and the manure placed in the angle opening to the front. Opposite and facing this side are the cart-shed and implement-house, 90 feet long. The shed holds fourteen carts, and the divisions are formed by coupled cast-iron pillars, about 6 inches square, panelled on the sides, with moulded capitals, on which the stone lintels rest. The pillars are joined together two and two, to take in the thickness of the wall (2 feet) over, and are set on large stone blocks, to keep off the cartwheels. These pillars occupy little space, and with a light have a strong appearance, from being in pairs, like three H.s set one above the other. The tool-house at end is a roomy place, having a wide door running on pulleys, and a beam at top, with iron guide-plates at bottom, sunk into the sole, and openings to allow stone, sand, or any other impediment to drop through. The same description of door is used in every place where barrows, carts, or cattle are in the way of passing through, and are all hung on the inside of walls, thereby protecting them from the weather. These doors are easily moved, are never in the way when opened, nor are they liable, like those on hinges, to be blown about by the wind.

Turning to the front of the building, which is 160 feet long, there is, as already mentioned, the manure-shed, and the entrance to one of the large dung or cattle courts, and a smaller court. In the centre is a turnip-shed, in one end of which is a stone stair, closed in, leading to the grain-loft; and right in front is a long wide passage, having on each side cattle-sheds, with stone feeding-troughs and straw-racks. The turnips are wheeled along this passage from the shed at one end, and at the opposite end is a door into the straw-barn. Above the turnip and cattle sheds is the grain-loft, being the largest in this quarter, the floor having an area of about 3,700 feet, and computed to hold upwards of 400 quarters of corn, if spread over a depth of 18 inches, with room to travel round the whole. The walls and floor are supported on cast-iron pillars, similar to those of cart-shed, and cast-iron beams, which have the appearance of stone lintels. The loft is covered by a single roof, 39 feet wide, and which, notwithstanding its great span, and the baulks being some 3½ feet above the walls, is formed of common couples, and shows how, by a judicious use of light timber, great strength may be gained. The loft is well lighted and ventilated, having sky-lights in roofs, and on each side ten large hinged windows, covered outside with iron wire netting. It has convenient hatches in the floor for loading the carts, and is entered from the front by a stone stair in end of turnip-shed, and at the other end communicates with the mill-loft by a strong wooden foot-bridge, resting only on the walls on each side of straw-barn.

On the opposite side of the road, and fronting the turnip-shed, is the poultry-house, having boiler-house at one end. The pigs' houses occupy the corner opposite. The poultry-house is 30 feet by 18 feet, divided into two separate houses, with tiers of nesting-places, and roosts formed in the walls, and having yards in the front enclosed with ornamental railing, covered over with a flat zinc roof. Out of and rising above the slate-covered roof of the poultry-house, rises the pigeon-house, 9 feet square, built with white stone pillars at the corners, and panelled, as it were, with red bricks. It has a projecting zinc-covered, bell-shaped roof, with moulded beams under the projection and pendants at the corners, and a gilded ball and vane at the apex of roof.

On the N.E. side, fronting the garden and mansion house, is the groom's stable, a private store with shelves, &c., cow-byre for ten cows, with stone troughs and feeding-passage in front, and turnip-shed at the angle of the square. In one end of, and separated by a pavement partition breast-high, are the calves' cribs, each closed in by a gate. At the back, and on the N.E. side of thrashing-mill, is another cow-byre for eight cows, similarly constructed and fitted up to the others; and between it and the grieve's store, where we started, is the straw-barn, 46 feet by 20 feet, communicating at one end with the feeding-passages of byres, in the centre, with passage of cattle-sheds, and at other end with farm stable. Jutting into the stack-yard is the thrashing-mill, 48 feet by 24 feet, with a circular saw and bench on one side, and the engine and coal-shed on the other. The loaded carts from stackyard ascend a slight incline to the sheaf-loft, emptying their loads at the feeding-bench. The engine is a horizontal one, of ten to twelve horse power. The working machinery is got up with all the latest improvements, including second fan, humbler, and corn-bruiser. The engine and machinery were supplied and fitted up by Messrs. Abernethy & Co., of Aberdeen, and fully sustain their well-earned reputation. The walls of corn-room, sheaf-loft, and straw-barn, are all 18 feet high: the cattle-sheds and grain-loft are 14 feet; and all the other buildings are 11 feet. The whole are open to the top of roof.

The stables and byres are drained into the dung-courts: these are again drained into a large manure tank situate at a short distance from the end of cart-shed. Ventilation is effected by a small roof over the point of the main one of the stables and byres, with a few inches between them, similar to a small V reversed, and placed over a larger one also reversed. The grieve's cottage stands on a knoll to the west of steading.

The whole buildings are of substantial character,—the walls of Newton freestone, the timber Baltic: the roof is covered with Ballachulish slates; and the floors are laid with either Caithness flags, asphalte, or square stone pitching. The roofs project at the eaves, showing the ends of rafters plastered between and also over the gables with moulded cantilevers.

The plans and specifications were supplied by Mr. Petrie, architect, Elgin, under whose auspices the whole works have been carried through.

The contractors were,—for mason work, James Gray, Hopeman; carpenter, John Thom, Elgin; slater, Wm. Findlay, Elgin; plasterer, Robert Stewart, Elgin; and plumber, John Hunter, Elgin.

ENORMOUS CASTING IN SHEFFIELD.

MESSRS. J. M. STANLEY & Co., of the Midland Works, have been casting vast blocks of metal for steam-hammer anvils. The fifty- or sixty-ton anvil, once considered to be a marvel, was followed by the 100-ton block; but that has again given way to a 160-ton block, which has been successfully cast. The mould was 12 ft. square at the base, and 11 ft. 6 in. deep, and it was estimated that nearly 170 tons of iron would be required to fill it. At intervals outside the shop were five furnaces, which poured their molten contents into the chasm from six a.m. to five p.m. A metal rod was then thrust through the mass to test its perfect liquidity; and the top of the pit was then closed, until the metal has cooled, which will probably be in about seven weeks. The operation of lifting the block and transferring it to its destination, has been arranged for, and it is confidently believed will be safely and speedily effected. The anvil is intended to be placed in the gun-manufactory of Messrs. Firth, which is close to the Midland Works. The object of the casting is to secure an anvil that no force can shake. The block will have to sustain the blows of a 25-ton steam-hammer (Nasmyth's), which will be employed in forging the 600-pounder and 300-pounder guns that Messrs. Frith are making for Mr. Whitworth. In this forge were made some of those guns that are now being tried at Shoeburyness, and which have stood the unprecedented test of nearly 3,000 rounds, without giving any sign of failure.

WEST LONDON SCHOOL OF ART.

THE second annual distribution of medals and prizes to the successful students took place on Wednesday evening, at a public meeting held in the new gallery of the school, 204, Great Portland-street, before a crowded assembly of students and their friends. The president of the school, Mr. A. J. B. Beresford Hope, was in the chair, and distributed the prizes. Among the gentlemen immediately surrounding the chair were the Earl of Powis, one of the patrons; Mr. Peter Graham, the treasurer; Mr. Hubert; Mr. Digby Wyatt; Mr. Godwin; Mr. Joseph Clarke; Mr. Macdonald Clarke, the master of the school; and Mr. Lomax, the hon. secretary. The Chairman said they had met together for the second time to distribute the prizes of what was once the Marylebone School of Art, but which had now grown into the West London School of Art,—an important change. He saw many familiar faces around him, but missed many others,—the Bishop of Oxford, the Bishop of Chichester; and as that night there was an important meeting of the Royal Academy, Sir Charles Eastlake, Mr. Redgrave, and Mr. Roberts were likewise unable to attend. A number of letters had been received from other gentlemen, including Sir Gardner Wilkinson, Mr. Donaldson, Mr. Harvey Lewis, M.P., the Rev. J. C. Phipps, and Dr. Goulbourn. The fact was, the Chairman said, they had met rather late in the season, he did not know why, and he must welcome those he saw there. He believed he might say that he saw approaching a more material connexion between the West London School of Art and the Architectural Museum, and that there would be a sort of underground union between the two some day. Although there were not all there they could have wished, there was a goodly gathering, and all who were there had, he was sure, sharpened their tongues. All who took an interest in such matters knew that schools of art had now arrived at a crisis. There was a new system that had been elaborated by the House of Lords. Well, standing before them, it would be expected he should say something on the subject. He would confine himself merely to the actual progress of the school which owed so much to a truly artistical and self-devoted man, Mr. McDonald Clarke, to whom its material progress was mainly due. Without going further into detail, he would say that last year they had ten medals and two honourable mentions, while this year they had twenty-one medals and eight honourable mentions. In the national competition last year, they had two national medallions, and no honourable mention; while this year they had three, and one honourable mention. Nearly all the works shown on the walls had been done between the first occupation of the room,—indeed, between November and March. It said volumes to the credit of those who had done the work. He was informed that though they had come into large and more commodious premises, they were still jostled by the number of students, in spite of the attractions out of doors,—what those were he did not know,—perhaps amongst them was that which a too severe Parliament had just doomed to silence. They had the loan of valuable casts from Mr. Owen Jones, and of carvings from Mr. Morant. He had a good hope that a portion of the collection of the Architectural Museum would be on the walls of that school before another year had passed. He saw, with pleasure, that there was a scheme for branch schools, taught by their own teachers, and using their own appliances. The West London School of Art could not be too well known. There was, however, a limited liability for their own subscribers, which he hoped they would never exceed. They were now, he understood, to take in the S.W., N.W., and W. postal districts: whether they could cover all the ground depended on their energy and the amount of support they would receive. The chairman then made some remarks on our growing civilisation, and of realizing the beautiful in everything. There existed a necessity for art for the million, and it must be pure. If they desired to oppose mere animal luxuries, they must work for that end; and they could not strive too much. He would say, be solvent and be ambitious—ambitious to the skies. He might commend to their treasurer the solvency, and to their secretary the ambition. He trusted they would for many years stand on a most solid foundation. He had made a long preface to a short text; and he would now proceed to distribute the well-earned honours with the approbation of the friends and relatives of the students who sat around them.

The President then proceeded with the distribution: forty-nine students, having obtained the mark "Excellent" in the time-drawing or second-grade examination, received prizes.

Thirty-three students (including six young ladies), obtained the mark "Good" in the time-drawing examination.

Thirteen students obtained medals for their studies: the entire number of medals taken by them was twenty-one.

The following students obtained the National Medallion, the highest distinction conferred by the Department of Science and Art:—Messrs. G. H. Ives, H. Montford, and G. S. Murdoch; and honourable mention was awarded to W. F. Wetten. A money prize offered by Captain Joliffe, M.P., for a sketch for a stained-glass window, was awarded to Mr. G. Porter.

The following are entitled to prize studentships, having passed four subjects in each, and taken medals:—H. Montford and C. S. Gordon.

H. Braun and F. Braun obtained prizes in the Society of Arts' competition among art-workmen.

Six senior students of the school have, during the past year, been admitted students of the Royal Academy.

In distributing the prizes, the president spoke very highly of the abilities of Mr. Montford, and that gentleman was loudly applauded by his fellow students.

When the distribution was over, the president remarked that he had no more to say to the students; but to the unsuccessful, go in and win, whip up and crowd the room till the ventilation becomes intolerable: to those who had been successful, he would say he only hoped they would be more so next year.

Earl Powis expressed the great delight he felt at the extension of the operations of the school; referred to the great works of the Grecian artists as examples to the students; urged the necessity for general education; and concluded by moving a vote of thanks to the chairman.

A pleasing incident occurred at this stage of the proceedings. A pencil, in the names of the students, was presented to Mr. Pilsbury, the second-master of the school; and that gentleman, in returning thanks, said the value of the gift was much enhanced by the fact that he had not the slightest idea that anything of the sort was intended.

Mr. Digby Wyatt, in seconding the vote of thanks, agreed with Lord Powis as to the necessity of general education; regretted the want of a library; and kindly offered to place ten volumes of his own books at the service of the students, to be replaced at certain periods by others.

Mr. Peter Graham spoke of the progress of the school, and mentioned several donations that had been received, including two from Sir Claude Scott, of 10 guineas each.

Mr. G. Godwin said that however successful the school might be in an artistical point of view, it was not so financially at present. He understood that they received about 120*l.* a year, but 250*l.* would be required to secure the permanent success of the school. He gave some reasons why this aid should be forthcoming.

The vote of thanks was carried unanimously; and the chairman called on the meeting to give a hearty cheer for the committee and officers of the school, which was spiritedly responded to.

THE PROVINCIAL SCHOOLS OF ART.

THE collection of works from the various local Schools of Art is still to be seen at South Kensington, and should be visited. In several departments the works are very satisfactory: the least so are the specimens in that of *architecture*, several of which, selected as they are for *national* competition, are little less than childish. An architect amongst the judges is evidently needed.

THE DRAMATIC COLLEGE FÊTE.

THE fête and fair in the Crystal Palace in aid of the funds of the Dramatic College went off with great spirit, and must have produced a large amount of money. Actors and actresses worked most energetically all day,—an exertion the more remarkable considering that many of them had to act in their respective theatres at night. Every show was filled for some hours with successive crowds, and again and again Mr. Tootle did his magic, Mr. J. Clarke explained his antiquities, Mr. Addison lectured on his Menagerie, and a whole Company at "Richardson's Show" went through a thrilling tragedy with every one killed but the fiddlers. The interest of the collection in the Model of Shakespeare's House in Stratford, was greatly increased by a selection of scarce and curious books of the Shakspearean era, lent by Mr. Tite, M.P. There are many other curious things in the Museum, which will remain for some time, and should be seen. The staircase to the upper rooms, by the way, is that which came from Dr. Johnson's lodgings in the Temple.

ARCHÆOLOGICAL INSTITUTE.

THE annual meeting at Warwick, commencing Tuesday, July 26, promises to be a good one. On that day the inaugural meeting will take place in the Assembly-room, at the Court-house, when the Marquis Camden will introduce Lord Leigh as chairman. At the close of the meeting the museum will be thrown open, and a party will be formed to visit the Beauchamp Chapel, the Leycester Hospital, &c.

July 27.—Meetings of Sections at ten a.m. Warwick Castle will be visited, and the Rev. C. H. Hartshorne will describe its architecture. Mr. G. Scharf will discourse upon the pictures. Later in the day an excursion will be made to Kenilworth Castle.

July 28.—Excursion to Coventry. Evening meeting.

July 29.—Excursion to Lichfield, where Professor Willis will give a discourse on the cathedral. Evening meeting.

July 30.—Meeting for papers. Excursion to Stratford. *Conversazione* in the museum.

August 1.—Meeting for papers. Excursion. In the evening a meeting at the Court-house, or a *conversazione* in the museum.

August 2.—Annual meeting and other business, in the Court-house, at half-past nine a.m. General concluding meeting.

COMPETITIONS.

County Lunatic Asylum, Bodmin.—The visiting justices of the county of Cornwall have selected, in competition, the design by Messrs. Alfred Norman & James Hine, architects, Plymouth, for the proposed new building for private patients.

Bell Hotel, Gloucester.—The first premium, of 50*l.*, has been awarded to Mr. H. James, of Gloucester, and the second premium, of 25*l.*, to Mr. C. F. Hayward, of London. Eighteen designs were sent in.

EPPING FOREST.

THE question of the inclosure of Epping Forest, of which we have already fully and more than once written in the *Builder*, has been again brought before the attention of the House of Commons. Mr. Doulton has announced that early next session he will move for a select committee to inquire into the whole question of metropolitan inclosures, with a view to keeping such spaces as Epping Forest in a state of native wildness for the healthful recreation of the people.

In the session of 1863, the select committee appointed to inquire into the condition of the forests in Essex recommended Government "to make provision for securing an adequate portion of Epping Forest for those purposes of health and recreation which it has been proved to your committee have been from time immemorial enjoyed by the inhabitants of the forest." So far, however, no good has resulted from this recommendation; and the Government authorities seem to be looking supinely on while inclosure is being carried out in various directions; thus, as each month and year passes, arrangements are rendered more and more difficult and expensive.

In connexion with this subject, Mr. F. Peel, who represented the Government, mentioned that the vote of the House which prayed the Queen not to allow facilities for the inclosure, or permit the sale, of Crown lands, within 15 miles of the centre of the metropolis, was carried against the wish of the Government. Mr. Peel said that he scarcely thought this was right, considering that the Crown land was simply a right of sporting over private property in Epping Forest. There is a right, however, which the people have in connexion with these lands; and although we cannot pretend to a knowledge of all the possible quirks and quiddities of the law as to this matter, common-sense suggests that if the Crown authorities preserve their right of sporting and feeding deer on these lands, the lord of the manor cannot inclose or build on them. There is a fair and equitable privilege to be secured on either side; and it would seem to be easy to bring this about by arbitration. It must not be forgotten also that the commoners residing within the forest have a right to wood, pasturage, &c., enjoyed by them from a very ancient date. This right will be abolished if the district is allowed to be divided into private inclosures: the poor dwellers of the forest will in that case be most wrongfully treated.

Some years ago the affairs of the Royal Forest of Dean, in Gloucestershire, had fallen into sad confusion: the disputes among the miners and others and the officers of the Woods and Forests were incessant; and claimants of various kinds had encroached upon and injured the oak plantations. In order to remedy the mischief, a commission of practical men was appointed to inquire with care into the facts of the case. Evidence of a varied and elaborate kind was collected, and persons of various classes who were concerned in the matter were examined. The various claims were taken into consideration; and either the money value of those parts which interfered with the growth of the forest was given, or ground in some other position under the management of the Woods and Forests Commissioners was exchanged, as an equivalent. For some time the Commissioners were strongly opposed by the foresters; but eventually every one was satisfied; and the change was acknowledged to be of advantage to all parties. Is it impossible to settle the Epping Forest matter in something of the same spirit? We think not. The portion of the land which would be especially useful for the public should be determined upon without delay; and then the claims which can be fairly made upon this property should be forthwith considered. If it can in justice be shown that the lord of the manor, or any other person, has a right to compensation, let that be paid; for eventually, even in the course of a few years, the sum which might now be paid in full satisfaction of all claims, will seem trifling in comparison with future worth.

In Epping Forest we do not desire to see a trim and ornamental park laid out; but simply that a sufficient space may be left in its present wild and most picturesque condition, to which the Londoners may easily resort, there to enjoy the charms of nature and the fresh pleasant air. Delays are dangerous; and it is hoped that the strong opinion expressed by the House of Commons will stir those connected with the Government to do their duty in this and some other important sanitary and social arrangements with alacrity and without official routine, so preventing the occurrence of evils which in years to come it will not be so easy to remedy. The first settlement of the forest must be the chief expense; for the cost of keeping the district in its present wild state for the next twenty or thirty years would be very trifling. If things, on the contrary, are allowed to go on as they do with impunity, we shall ere long have no forest at all to trouble ourselves about.

LOWER MIDDLE-CLASS SCHOOL, ARDINGLY.

THE foundation-stone of another school, in connexion with St. Nicholas College, Lancing, was laid, on Tuesday, the 12th, at Ardingly, a small village in the weald of Sussex, about three or four miles from the Balcombe Station of the London and Brighton Railway, and about the same distance from the Haywards Heath Station. The future school will overlook the south of the valley of the Ouse and the viaduct which spans it: to the north-east the steeple of Lindfield Church may be seen rising up; and on every side there are well-wooded eminences,—amongst them the "high beech," pre-eminent,—and bosky dells, relieved by grass-lands and cornfields, with those rich hedgerows which distinguish the scenery of the weald. Well we know their wild flowers!

Lord Granville laid the stone, and Lord Brougham, the Bishop of Chichester, Mr. Beresford Hope, and other eminent persons were present. The school is to be capable of accommodating 1,000 boys, who will pay 13*l.* a year for their board, lodging, washing, and schooling, and about 3*l.* more in entrance fees and cost of books, &c., making it 16*l.* in all. From careful calculations it has been ascertained by the Rev. Mr. Woodward, the founder of these schools, that this 16,000*l.* per annum revenue from the boys will cover all the expenses of the school, including the salaries of masters. The building is erected by the aid of the friends of education; but it is hoped that after a start of one or two years the institution will not only become self-supporting, but yield a profit which is at once utilized to extend the system in other parts.

The architects of the Ardingly College are Messrs. Slater & Carpenter; and the builder is Mr. F. Cane, of Brighton. It is intended when complete to accommodate, as we have said, 1,000 boys, besides masters, chaplains, and other official persons.

The plan of the college is arranged in two large quadrangles. That in the front is open to the south. The inner quadrangle is divided from the outer by a lofty range of buildings, comprising the dining-halls, school-rooms, chapel, and cloister. The principal entrance is through a tower placed in the centre of this block of buildings, dividing the dining-halls from the chapel.

In the buildings on the various other sides of both quadrangles are arranged the dormitories, day-rooms, class-rooms, and other necessary accommodation for the boys, and living-rooms and bed-rooms for the clerical junior masters and the chaplains. Some of the masters are placed in the blocks of buildings at the ends of the wings of the south quadrangle. The head-master's house projects to the south-east in the extreme front of the building, and the second master is accommodated in the centre of the north side of the inner quadrangle, at the other end of the college. The principal kitchens and offices form a separate court by themselves, and are situate on the west side of the college. The dormitories are placed, as before stated, in the wings or sides of the two quadrangles, and are made to accommodate some of them fifty-two, and others twenty boys each.

The dining-halls, two in number, are arranged one over the other in the western half of the great central building, extending, that is to say, from the kitchens to the central tower. The portion of the central building eastward of this tower is used for school-rooms and for the chapel, the former occupying the ground-floor. The dining-halls are each 100 ft. long by 32 ft. broad.

The sides of the quadrangles, with the exception of the central building, are in three stories. The building is in the Early Pointed style. The materials to be used are red brick for the walling generally, and the windows and other features are to be of Scaines Hill stone.

CONTINENTAL NEWS.

France.—The Emperor has commanded a statue of the late King of Wurtemberg, to be executed in marble, and placed in one of the galleries at Versailles.——Chateaubriand, the poet, is to have a statue at St. Malo, his birthplace.

Brussels.—With reference to our notice of the prizes awarded to the successful competitors, for the Hague Museum, in the *Builder* of 30th April last, we are now enabled to add that the sealed envelopes of the five plans that received honourable mention have been opened by the committee, and were found to have been sent in by the following architects:—Motto, "*Travailler c'est vivre*," from M. Louis Radoux, at Paris; "*Concordiâ res parvæ crescunt*," from Mr. Lucas Hermanus Eberson, of Arnheim; "Rembrandt," from M. Charles Peigniet, of Paris; "*Streben ist Leben*," from Herr Heinrich Gmelin, of Carlsruhe, established at Bâle; and "*Orange Boven*," from M. Charles Demaeght, of Brussels.——A model of a statue of Mr. Verhaegen, the Belgian statesman, is now temporarily placed in the Great Court of the University. Geefs, the sculptor, was to execute it in marble, but bronze has now been decided on as a more durable material.

Leyden.—The celebrated Museum of Japanese Curiosities, presented to the Dutch nation by Colonel von Siebold, and which has hitherto been open to public inspection in a house in the Breedestraat, has been removed within the last few days to the new National Ethnographical Museum, on the Hoogeweerd. It is understood that the valuable collections of the lately dissolved Royal Academy of Delft are to be brought to Leyden, and also placed in the New Museum. The Museum of Antiquities of this university has lately been enriched by a set of casts from the Roman bronzes found a few years ago in the bed of the Rhine, near Xanten, the originals of which are in the Royal Museum at Berlin. The same Museum has also just received a valuable contribution of Javanese antiquities, a present from the heirs of the late Mr. Buyskes, of Leyden, as well as a collection of ethnographical objects from New Zealand, presented by the same heirs; and, finally, a collection from Dr. G. Wienecke, medical officer at Benkoelen, on the Island of Sumatra, containing many interesting antiquities discovered and collected by that enterprising gentleman in Sumatra and Engano.

Vienna.—The annual meeting of German architects will this year be held in this city, from the 29th to the 31st of August. Upwards of 800 architects have already signified their intention of attending. Fernkorn's original quarter-size model of the colossal equestrian statue on the Burgplatz has been purchased by subscription by the officers of the Austrian army and presented to the son of the hero, the Archduke Albert of Austria. It has now found a place in the Weilburgh at Baden, near Vienna. A curious custom is getting very prevalent here. *Cartes de visite* and other photographic representations of the deceased are inserted in their tombstones, covered with glass.

Berlin.—The exterior of the Royal Palace has just received eight full-sized statues, executed in sandstone. "Magnanimity" and "Bravery," both male figures, are by Schievelbein: the female figures are "Gentleness" and "Liberality," by Heidel; "Commerce" and "Art," by Fischer; and "Industry" and "Navigation," by Stürmer.

Cologne.—A stained-glass window, which, when finished, will be the largest in the world, is being executed here for the cathedral at the sole expense of the Crown Prince of Prussia. Over the west entrance into the nave, between the two towers, there will be a window 70 ft. in height, and this window will receive in gigantic proportion a representation of the Last Judgment. The design is from the cartoons of Peter von Cornelius, and was originally intended for the Campo Santa at Berlin, where, however, it was never executed. Voss, the sculptor, of this town, but practising in Rome, has just finished two works, which are much praised. The one is Rebecca at the well: she is pensively examining the bracelet just given to her by Abraham's servant: her right hand rests on the pitcher. The other statue represents Loreley, *Anglicé* Lurline, and is intended for exhibition at the annual Fine Arts show at Berlin.

Colberg.—A statue of the late King of Prussia was unveiled last week in presence of the Crown Prince. Palm, the bookseller, who was shot by the French very shortly before the Prussians

successfully threw off the foreign yoke, is to have a statue at Brannan. The designs were submitted to the ex-King of Bavaria, who decided in favour of one by Knoll, of Munich.

Dresden.—A very large building is being erected here, intended for representations of various kinds. It is circular on plan, and is estimated at about 24,000*l.*

Lisbon.—Five premiums, of which the highest is 11,100 francs, and the lowest 2,755 francs, are offered for the best designs for a monument and statue to be erected at Lisbon in memory of the Emperor Dom Pedro IV. No doubt, the Portuguese embassy in London would give further information.

FROM SCOTLAND.

Elgin.—Mr. Hutton, of Glasgow, proposes to erect extensive chemical works in the immediate vicinity of Elgin. A site for the manufactory has been spoken of at the south-eastern extremity of the Leper Lands, near the Pinefield Nurseries.

St. Andrews.—The foundation stone of a new United Presbyterian church has been laid here.

Perth. — The cofferdam to be used at the Dundee railway bridge is nearly completed. The bridge itself is in a forward state. The iron girders have been painted of a light-blue colour; and the flooring, railing, and foot-path are nearly completed.

Montrose.—The new building for the Royal Bank of Scotland is now nearly finished, and has been opened for business. The building is three stories in height. The whole of the windows in front have moulded architraves of various forms on the different floors. Those of the upper floor have, in the centre, columns with carved capitals. Moulded stringcourses go the whole length of the building, at the level of the window-sills, with conventional carved frieze courses below. The whole is surmounted with a stone cornice, with cantilevers and large paterae between each. The stone for the front is from one of the Fife quarries. The building, which is in the High-street, was designed and carried out by Messrs. Peddie & Kinnear, of Edinburgh. The contractors were Messrs. Balfour, Hird, Middleton & Son, Lindsay, and Millar; and under the inspectorship of Mr. Clunis the building has been finished. The same architects are executing at present, at Sunnyside, a mansionhouse for Mr. T. B. Paton. The building is Italian in style.

Aberdeen.—During the recent sojourn of the Court at Balmoral, the movement set a-going in the city and county of Aberdeen to erect a statue of the Queen in the city, is said to have been brought under the notice of her Majesty, who expressed her satisfaction with the proposal, the more especially as it had originated with the working classes. We understand, also, that her Majesty signified her willingness to give the sculptor a sitting when she revisits Balmoral during the autumn.

Inverness.—The inverness district lunatic asylum was formally opened on the 18th of May, and is now in regular use. The building has been in progress for several years. The plan was prepared by Mr. Mathews, Aberdeen, and the details, having reference to the health of the patients and the special arrangements required in such institutions, were carried out under the supervision of the medical officer. The asylum occupies a conspicuous situation, on the eastern shoulder of Duncan, between that hill and Craig Phadraig, on what is called the Leachkin. The asylum has a frontage of about 600 feet. Towards the town the appearance is tame and monotonous; but at the back two wings project boldly, the towers are better seen, and the outline is more broken. The principal entrance is at the back, so as to avoid exciting the inmates by arrivals and departures. The centre block contains the kitchen and offices connected therewith, the apartments of the various officers and domestic servants, and the dining and recreation halls and chapel. To the left, or east, of this is situate the females' convalescent ward; and further to the left, at right angles, are the rooms to be appropriated by and by to the worst class of cases. Beyond it, again, is the female infirmary. The western half of the building is arranged in precisely the same manner, and set apart for the male portion of the inmates. The hospitals, or infirmaries, are thus separated from the rest of the building: so that, in the event of an epidemic, the inmates can be completely shut off from the other patients. Each hospital has a small airing yard attached, and is fitted up for the accommodation of twenty patients. The building is heated by Haden's patent, and lighted with "home-made" gas. At distances of from 80 feet to 90 feet throughout the length and breadth of the building, and rising from the foundation to the roof, there are thick stone walls containing iron sliding-doors, which can be drawn out across the corridors, so that in the event of a fire breaking out in any particular ward, all communication with the rest of the asylum may at once be effectually intercepted. Other precautions against accident have been adopted. In the industrial department are joiners', tailors', and shoemakers' shops. The laundry, farm-offices, and gas-works are situate a short distance from the main building. The whole of the work is intended to be performed by the patients. The accommodation is calculated for about 350 patients.

Lerwick (Shetland).—An episcopal church of modest dimensions has been erected here, and consecrated by the Bishop at Aberdeen. The Church of St. Magnus has been built from designs furnished by Mr. Ellis, architect, Aberdeen. It is a building in the First Pointed style, consisting of nave and chancel, with a bell-turret near the junction, carrying a small bell. The church is seated for about 250. The principal features internally are the chancel arch and the elevation of the altar, which stands upon a footpace reached by seven steps from the floor of the nave. There is an organ, presented by Mrs. Forbes, of Boyndlie. This stands under an arch on the south side of the chancel, which also gives entrance to the vestry. The east and west windows are both rose windows, the former being filled with stained glass. The church stands on a considerable piece of land given by Major Cameron.

FERRY ACROSS THE SERPENTINE.

BEFORE the foot-bridge spanned the waters of St. James's Park, in the line between Marlborough House and Queen's-square, a ferry-boat, plied by an old tar, afforded great accommodation to men of business and wayfarers between Pall-Mall and Westminster; over which way there is now a continuous intercourse.

Since the Exhibition of 1862, and the dismissal of the St. James's boats, another ferry, at one penny a head, has been established across the Serpentine, on a line between Prince's-gate and Hyde Park Gardens, which appears to be as yet little known, although there are always six boats in waiting, some of them for rowing parties; but there is no notice-board of the ferry! There are great numbers who traverse the park, from Prince's-gate towards Hyde Park Gardens, and for them this would give a short cut of half a mile, besides the solace of a varied and pleasing rest.

In order to establish the ferry, and to compensate the boatmen, so as to insure regularity of service, it should be made known that there is one. There can be no bridge to spoil this our only London lake, or mar a pleasing picture. The plying skiffs would give it animation; and sailing parties over the sunny expanse would also add a pleasing effect to the scene.

The condition of the waters, it is true, is not what it ought to be, if a proper supply of *fresh* were drawn from the head of the Serpentine; but, before that can be done, alterations must be made, both in the pumps and their adjustment. At present, the adaptation is, to draw from one tank, which receives both the fresh spring water from the well, and the reflux water, as returned from the festering Serpentine itself!

The quantity drawn from the well every hour is 10,400 gallons, and the quantity from the reflux of the lake is 27,300 gallons! but by alteration in the pumps and application of proper mechanism, fully that quantity—that is, 37,700 gallons hourly—might be obtained, it is assented, from the well alone. The pumps are not, however, worked daily for so many hours as they might be. Alterations might be made in the winter months, without interfering with the sanitary influence of the present supply; and then for the improvement of the waters, as used by the multitude for bathing, what a boon it would be to those who resort thither, and can go no farther to enjoy a swim. Although the water is not quite so green and weedy as it used to be, it certainly offers little inducement for the increase of bathers; and it is surely a matter of moment to Government that this enormous population, which is already bereft of its fluvial resorts on the Thames banks, should have some opportunity of lustration afforded them. The Thames is too much polluted; besides that for a wide district it is too remote; and, where accessible, there are no reserves for dressing or undressing. Certainly baths have multiplied in all quarters of the metropolis; but there is no space for the practice of swimming like the Serpentine, where the feat from Cestos to Abydos might be equalled.

This is a municipal and almost a national question: every boy ought to know how to save himself if submerged by accident; besides that for health and cleanly habitudes, an opportunity to bathe should be given wherever it is practicable. The hours of license—from six to eight a.m. and seven to nine p.m.—could interfere with no use or right of promenaders, "*à pied ou à cheval.*" Might not the Commissioners dedicate a little further expense to an increased supply of water from the fountains? It ought also to be suggested, that if the engines are to be worked for twelve hours daily, the one solitary and overworked engineer should have an apartment either on the spot, or in one of the numerous lodges and lie-byes in the Park.

MALVERN.

THE furniture of the Priory Church has just received an addition, in a new pulpit, reading-desk, lectern, and a pair of communion chairs. The whole are constructed of oak, and the cost will not fall far short of 500*l.* The whole were designed by Mr. G. G. Scott, and have been executed by Messrs. Wood & Son, of Worcester. The pulpit is in plan a semi-quadrangle, with the three sides of an octagon jutting from the whole side or front. It is moulded and panelled, each panel having a carved centre on a diaper ground, terminating at the upper end with carved foliage. The interior of the pulpit is reached by the aid of a staircase, which winds round the south-west of the four piers that support the tower of the church. Mr. Boulton, of Worcester, executed the carving.

A meeting has been held in the Malvern Link Working Men's Club-room, for the purpose of considering a project for erecting suitable buildings, in conjunction with the above club, for the more complete accommodation of the working men of the district; in fact, a kind of boarding-house, under the Limited Liability Act. The building will cost about 650*l.* The club-room will be 48 ft. by 24 ft., underneath which will be a dormitory for twenty beds, and lower down a dining or eating-room. Rooms for a porter and his wife will also be provided, in addition to a pantry, wherein the working men can deposit their purchases. An appropriate resolution was adopted, and a committee appointed to carry out the object in view.

UTILISATION OF TOWN SEWAGE.

A HOPEFUL experiment is about to be made at Aldershott, by Mr. Blackburn, of Aberdeenshire, in the utilisation of sewage. 160 acres of gradually sloping heath below the level of the camp have been allotted to him, and on to this farm some 700 tons a day of the drainage of the two camps will be delivered. The land is now being torn up by heavy ploughs and teams, 18 in., by 20 in. deep. A furrow, 10 in. to 12 in. deep is turned, and the subsoil is stirred 8 in. deeper by a subsoil plough. The whole of the ferruginous pan, as it were, of concrete, which has hitherto held water after rain upon the surface of the sandy heath is being broken up, and the drainage of the land is being thus effected. When a certain tilth has been provided, and the scanty growth of ling which naturally covers the land has disappeared, the land is levelled and sown with Italian rye-grass. Pumps worked by a 12-horse power engine will receive the sewage; and, arranged as to direction of their thrust, and as to size of pipes, &c., so as to avoid friction as much as possible, they will drive this sewage through underground piping to a hydrant in every 5 acres of land. Surface pipes will then conduct it to stations in every 1·25 acre, and thence a man will distribute 200 or 300 tons per acre evenly every day by hose. Some few acres of land have been already sown, and 60 or 70 acres have been already subsoiled: some portion of the expenditure on buildings has been already incurred; but nothing can be done until the stream is delivered on the land. Mr. Blackburn's experiment is one both of agricultural and of social interest.

AN ARCHITECTURAL TRIP IN ALGERIA.

THE coming season is the usual one for holiday tours; but as there are doubtless some amongst your readers who find it difficult to leave home in summer, permit me to suggest, that were a few to substitute winter trips to Algeria, they might greatly extend our knowledge of Saracenic art. The present disturbances will doubtless soon pass over, and in ordinary times travelling there is safe and agreeable enough.

Tlemcen, near the western frontier of that country, just now presents peculiar facilities for the study of architecture. For centuries the capital of the kingdom of Mogreb-el-Aksa, few cities contain more striking proofs of former greatness. Much has been destroyed, but much also still remains, though rapidly passing away before the changes effected by the French administration, in carrying out what seems to be the darling object of the French official, namely, to make every colonial city a miniature copy of Paris.

When the city of Fez becomes accessible to the tourist, perhaps it may offer a yet wider field for study; but there the mosques are still a closed book to us; and of the few Europeans who have visited the sultan's reception-rooms, none seem to have had sufficient architectural taste to give the world any information as to their artistic merits; whilst the Palace of Mekines, perhaps the rival of the Alhambra, is known only as yet by name. Still, whatever the unknown future may open to us in coming years, it is to be hoped that the present will not pass away without our making use of the opportunities now offered. A large portion of the antiquities of Tlemcen have already been destroyed; others will soon follow; whilst the mosques that are allowed to remain, being generally renovated by French artists,—in an elegant style, it is true,—lose all archæological value, so that should no one competent to the task avail of the occasion, it is to be feared that all record will for ever be lost of the ruins of one of the chief seats of Saracenic learning and art.

Besides the numerous mosques within the city, and the five massive concrete walls that once encircled it, about half a mile to the west, the traveller is shown the remains of a large fortified enclosure and mosque, called Mansourah, said to have been erected by Youcef Al Mancour, Sultan of Fez, as a permanent camp, during a siege of *seven* years, which ended in the year 1309, in the taking of the city, and its reduction from the capital of a powerful state to a mere provincial town. Of the mosque itself only some concrete walls remain, but of the tower, nearly the whole of the western side is perfect: tradition tells us that the eastern, face having been built by Jews, has long since crumbled away, leaving the work of the true believer firm and erect as ever. It is quite different from any other yet described, being placed (instead of at one of the angles) in the centre of the western front over the principal entrance, a low semi-circular archway, surmounted by a bracketed gallery, before a wide arcaded opening; above are the usual recessed panelling, and an elegant cusped arcade, occupying the highest story now left.

The great cemetery to the east of the city is hardly less interesting, with its tombs and skulls of the last eight centuries. The museum and the sanctuary of Boumedine, an adjacent village, also contain numerous relics of past greatness.

Of late years a good deal of attention has been devoted to Moorish ornamentation, but the study has been chiefly confined to Spanish examples, as these are in many cases the work of Spaniards under the Saracenic rule; or, if really Moresco, have since been very much altered, so that they can hardly be taken as a fair guide to the characteristics of the style. Until I visited Barbary, I never understood the structural character of Moorish architecture: in fact, writers seem hardly to have considered this branch of the subject, or noted that this was the style in which concrete and plaster construction attained the highest development, like the arch did in the Gothic, or the column and lintel in Greek art.

At Mogador, near the confines of the Great Desert, this system may be seen in its most primitive form. Complete houses of concrete and bamboo lath, exhibiting hardly a single straight line, but walls, pillars, floors, and roofs all presenting different varieties of curves and bulges. Proceeding north you find, first, the floors levelled and laid with glazed tiles; next, ceilings of bamboo and mortar replaced by elegantly framed woodwork; and, further on, concrete pillars give place to marble shafts with elaborately cusped arches and rich plaster mouldings.

The historical development of the Saracenic style was probably much the same. Beginning in a country in which large timber is almost unknown and hard stone little used, the rough edifice of concrete and mortar gradually advanced by the successive introduction of glazed tiles, wooden fretwork, marble shafts, and plaster mouldings, to the perfection attained in the Alhambra of the fourteenth century.

A Moorish mosque, like a Greek temple or a Mediæval church, always presents the same general features, however much the decorative details may vary;—a square or oblong area, one half covered by a hip-shaped tile roof, resting on massive rows of arches, but rarely, if ever, vaulted across; and the open portion encircled by a substantial arcade, with a square tower at one of the western angles. The form of this is very similar to the celebrated Geralda of Seville, the sides divided into two or three recessed panels, the first containing one or two shafted arches, the other a small arcade surmounted by carved fretwork, inlaid with glazed tiles, and terminating in pyramidal battlements, inclosing a small central turret.

The Moorish style, like the Gothic, appears to present three stages of development:—

The first, that in which the decoration is confined to plaster, in low relief.

The second distinguished by bold circular pillars and interlacing arches.

The third, in which light shafts, stalactite arches, and honeycomb plasterwork take the place of these.

In the first we find a roof composed of small pieces of wood, elaborately framed together, resting on plain pointed or horseshoe arches, with square piers more or less massive, these and the inner surfaces of the walls being covered with plaster decoration in low relief; but the plan and design are purely utilitarian, the ornamentation being confined to superficial coatings of stucco and paint. The mosques at Tlemcen nearly all belong to this period, and are stated to date from the twelfth century. The noble Norno-Saracenic churches of Sicily may perhaps be considered as an adaptation of this style to the stone-work and gold mosaics of the lower empire before those changes had been developed which form the second stage. The only specimen of the first-class that I have seen in Spain is the old Synagogue at Toledo, now Sta. Maria Blanca, and in this the piers are octagonal, not square. In fact, it may be doubted if its use ever became general in that country: it is more probable that its introduction by the conquering race into a country well provided with stone, and amongst a people accustomed to circular columns and light arcades of the later Roman empire, at once caused the development of the second stage.

In this the massive square piers are replaced by circular columns, and the heavy flat-sided arcades by the elegant cusped and interlaced arches that we see at Cordova and in the little church of Sta. Christo de Luz, at Toledo, the ornamention thus becoming a structural portion of the edifice. These changes were doubtless gradually adopted in Northern Africa also; but this, being a stone rather than a concrete style, soon gave place, at least on the southern shores of the Mediterranean, to the third and last development.

This is the elaborate style familiar to us from the Alhambra Court of the Crystal Palace. In it plaster is no longer a mere superficial coating, but becomes a portion of the structure itself, in those many-sided stalactite arches, honeycomb pendants, and elaborate eaves that have so long elicited universal admiration in the courts of the Spanish Alhambra. In it the plasterers' art attained the highest development the world has yet seen; brick, stone, and concrete being only used to form the framework on which to attach the blocks of plaster. As Tlemcen, at the beginning of the fourteenth century, was reduced to the rank of a mere provincial city, but few specimens of this style are to be expected there. I, however, noticed a beautiful little mosque in the Place St. Michel, now used as a school. Some portions of the Great Mosque belong either to this or the second stage, but I had not time for a close enough examination to ascertain to which they should be attributed.

This is still the style in use in Morocco, though recent erections, I think, show some decline in taste on the Alhambra period. This is particularly observable in the small palace at Saffi, erected about the close of the last century, and in a little pavilion near Mogador, intended as a resting-place for the Sultan during his visits to that city, but is not so noticeable in some of the new houses at Mazagan.

The increasing probability of an early conquest of Tunis by the Italians, and of Morocco by Spain, which will soon sweep those countries also of their relics of Mediæval greatness, renders it not unlikely that a few years may clear the southern shore of the Mediterranean of all that is of interest to the architect. C. D. S.

CASTELL DINAS BRÂN.

IT is possible that the following brief description of Castell Dinas Brân may find a place in your pages. It was written during a recent visit to the ruin; and though by no means an exhaustive account, it is fuller than that given in Murray, and touches several points, not, I think, before noticed.

This castle crowns the summit of a steep conical and isolated hill, which rises on the left bank of the Dee to 910 feet in height, between that river and the higher scarp of limestone which forms the southern edge of the Ruabon coal-field. About a mile north-west of the castle are the beautiful ruins of Vallecrucis Abbey, and the more ancient pillar of Elisey.

The castle, evidently intended to guard the passes of the Dee from invaders from the east, occupies a site which, being absolutely inaccessible to waggons and heavy baggage, could scarcely have been selected by either a Roman or Norman engineer. This agrees with the tradition which attributes this castle to the Welsh princes.

The castle is a quadrangular inclosure, about 400 feet east and west, by 200 feet north and south. On the east and south sides is a deep moat, cut in the slate rock, and there are traces of a slighter ditch on the north-west side also. The north side is naturally steep, and has been scarped by art. The south side, being that towards the river and town of Llangollen, is further guarded by a second or outer ditch, up which the approach seems to have lain from the south-east.

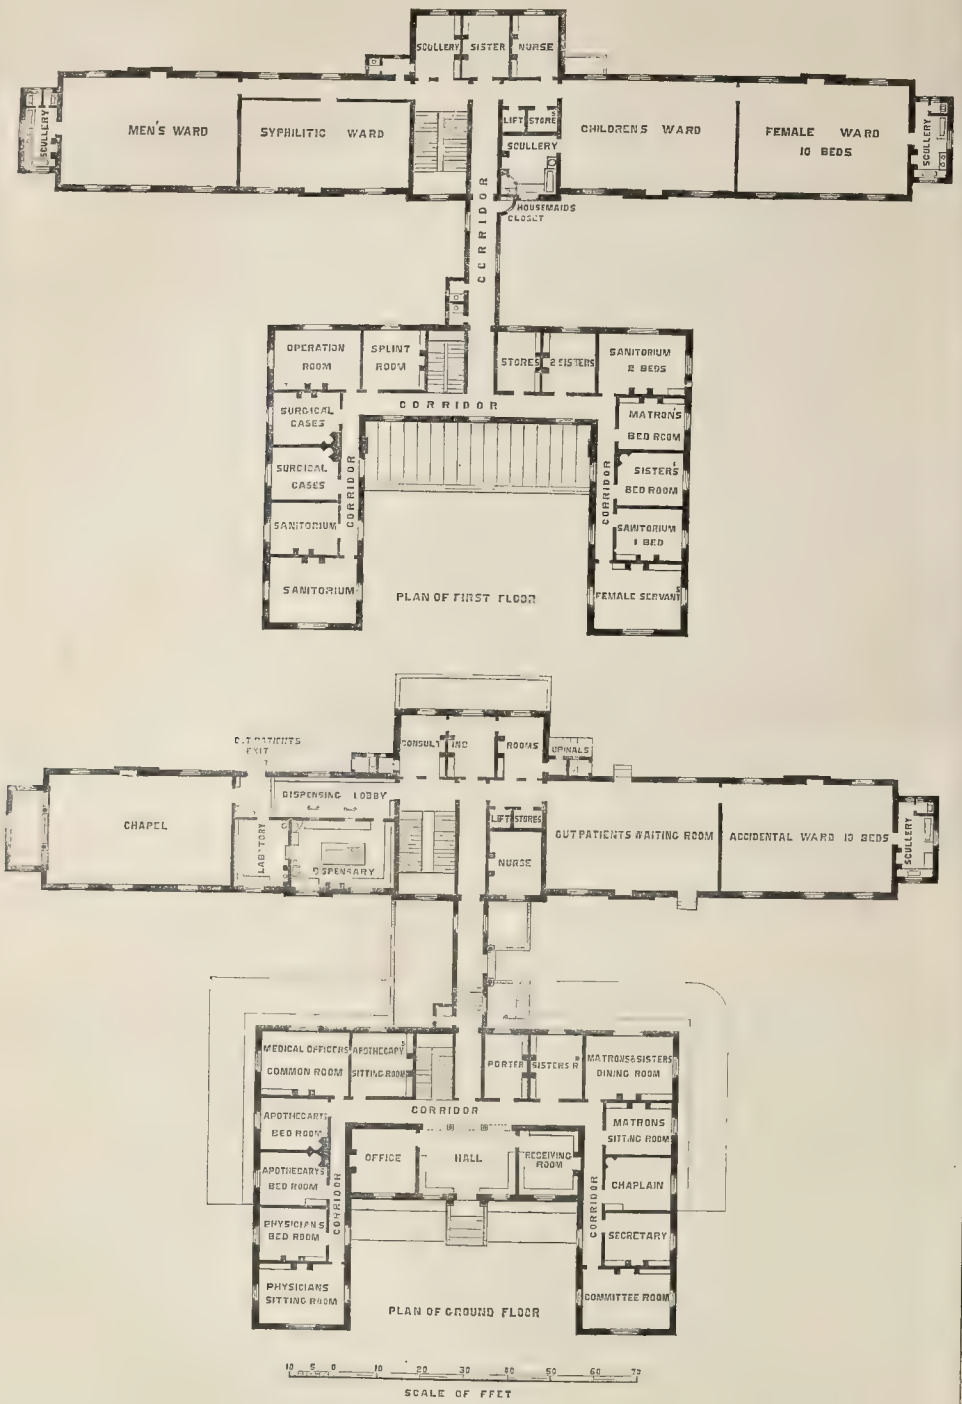
The north wall is plain. At the north-west angle was a tower, connected with, no doubt, a garderobe, in which was a passage, still to be traced, in the thickness of the west wall. Here also are traces of a ribbed vault.

At the south-west angle are other buildings, and in the south wall an opening, possibly a postern. In the centre of this front is the kitchen tower, with a semicircular bow outwards, and a large chimney. An archway opened from this tower eastwards into the hall, of which apartment two windows remain in the south wall.

The eastern end of the enclosure is cut off from the rest by a foss excavated in the rock, the eastern or part so isolated having been the lord's strong place or keep. It is entered from the rest of the castle by a winding passage and flight of steps in the thickness of the wall, and below the staircase is a curious pit in the rock.

At the north-east angle is a vaulted passage, which seems to have been the principal entrance. In the crown of the arch are three circular holes, like that in a London cellar, but for what purpose it is difficult to say. They do not appear to have been connected with the defences, and light could scarcely have been wanted so near the gate. North of this passage are some arch mouldings of Decorated date, which may have belonged to a chapel.

The ditches are dry, and water must have been preserved in cisterns.



The walls are much ruinated, and most of the ashlar and cut stone is gone.

The approach, practicable only for footmen or Welsh ponies, seems to have entered the outer *fosse* at the south-east angle, to have passed in face of the south wall some way, then to have made a traverse along the inner ditch, below the south and east walls, reaching the portal at the north-east angle. The banks thrown up on the exteriors or counterscarps of the southern ditches seem contrived to cover the bend of the traverse. C. T. C.

THE GERMAN HOSPITAL, DALSTON.

WE give a perspective view and plans of the new hospital, Dalston, now in the course of completion, for the reception and cure of natives of Germany and others speaking the German language. Professor Donaldson is the architect: Messrs. I'Anson are the builders. We must reserve particulars for another occasion. In the meanwhile the plans will explain the general arrangement of the building, and the appropriation of the various parts of it.

"

THE GERMAN HOSPITAL, DALSTON.

THE GERMAN HOSPITAL, DALSTON.—PROFESSOR DONALDSON, ARCHITECT.

LAW OF LANDLORD AND TENANT.

IN consequence of numerous cases in which tenants complain of having the rent demanded of them when their houses are uninhabitable, the judge of the Swansea County Court, Mr. Thomas Falconer, has drawn up a note of the law affecting both tenants and landlords, which, as it seems to us, may be usefully circulated:—

It may not be disadvantageous to relate the rules of law governing the general occupation of houses, and the consequences of special contracts to occupy houses on condition to keep them in a state of repair, whether this obligation rests on the landlord or on the tenant.

First, it should be known, that the law does not imply any warranty that a house is fit for human habitation. A plaintiff agreed to let to the defendant a house and garden with the use of the fixtures for three years, the tenant to preserve the house and premises in good tenantable repair. The defendant alleged that the house was let to him in order to inhabit, but that when he entered to the time he left the house it was not habitable—it was infested with bugs (it was an unfurnished house), and that he quitted it and gave notice to the plaintiff. It was held that the law implied no contract on the part of the lessor that the house was in a reasonably fit state for habitation, and that there is no implied warranty on a lease of a house or land that it is fit for habitation, occupation, or cultivation.—(Hart *v.* Windsor, 12 M. & W., 69.)

Again, where the declaration stated that the defendant let a house to the plaintiff, knowing at the time that it was in a state dangerous to occupy; knowing, also, that the plaintiff was ignorant of its state, and that he took it for the purpose of immediate occupation, and that he believed he could immediately occupy it, and that the defendant never gave notice to the plaintiff that the house was in that state, and the plaintiff entered and the house fell and did special damage: it was held that there was no cause of action. It was admitted that there was no express or implied warranty the house was fit for immediate occupation; but it was said that because there was no positive statement made by the defendant it was not fit for immediate occupation;—that because the defendant knew it to be in a ruinous state, and did not inform the plaintiff of that fact, therefore the defendant was liable, though he was not guilty of any active deceit. But it was consistent with the state of facts disclosed in the declaration that the defendant knew that the house was ruinous, or that the plaintiff came to him and asked to hire the house, and that the defendant had said he would let it, and did let it. The declaration did not say that the defendant made any misrepresentation, nor that he knew the plaintiff was acting under a delusion induced by the defendant's conduct as to the state of the house. He might reasonably have thought that the plaintiff would do what other persons would have done in the position of the plaintiff, namely, make an investigation and satisfy himself on the point. There was no averment of deceit, and there was no obligation on the defendant to make a disclosure as to the state of the house.—(Keats *v.* The Earl of Cadogan, 15 *Jurist*, 428.) And when the chimney-stack of a house fell upon the house, though express notice of the danger was given by the tenant to his own landlord, and the landlord had been requested to repair the chimneys, the landlord was held not to be responsible to the tenant for the damage done, as a landlord is not bound to keep the premises in a tenantable state of repair during a tenancy from year to year, except under an express contract.—(Golt *v.* Gandy, 23 *Law Journal* R., 1.) He would have been responsible for damage done if the stack of chimneys had fallen on the neighbour's house.—(Todd *v.* Flight, 30 *Law Journal* R., 21, C.P.)

2. If the landlord undertakes to do repairs, there is no implied condition that, if he fails to perform this part of his contract, the tenant, after having occupied the premises, may throw up his tenancy to avoid the payment of rent. Thus, in an agreement for the tenancy of a building for a term, and the landlord was to do the repairs. The tenant entered, and there was no implied condition that the tenant might quit if the repairs were not done. The defendants were yearly tenants of certain malt-offices at the rent of 25*l.* a year. They entered into possession at Michaelmas, and in the month of March, 1843, they quitted possession on the ground that they were not in a fit state of repair for the purposes of malting, and they tendered the keys to the agent of the plaintiff. The question was, whether, if the landlord is bound to repair the premises during the tenancy, there is an implied condition that, should he fail in the performance of his contract, the tenant may throw up the tenancy. If the contract were under seal, a condition that the tenant, on the breach thereof, might determine the tenancy, could not be implied. There is no legal principle that an agreement by parol is to be construed differently in this respect from one under seal. Assuming there was an agreement of the landlord to repair,—though none was actually proved,—there was no principle of law to authorise the importing into the contract the condition contended for.—(Surplice *v.* Tamworth, 7 Manning & Granger, 584.)

3. If the tenant undertakes to do repairs, and enters into possession, he is not entitled to determine the tenancy if the landlord fails to make other repairs necessary for the habitation of the premises. Thus, where the tenant of a house undertakes by his agreement to keep it in good repair as when he took it, fair wear and tear excepted, he is not entitled to quit on its becoming uninhabitable for want of other repairs during his term, and the landlord is under no implied obligation to do any repairs in such a case. The house in this case was rented for 30*l.* a year, and in consequence of age and natural decay, and the rotten, founderous, miry, and insecure state of the walls, timber, and foundation, and for want of sufficient sewerage and draining, became ruinous, insecure, dangerous and unsafe, and unfit for habitation. In order to keep the basement free from water, pumps for several hours a day were necessary, and it was then so wet as to be unfit for occupation; and a surveyor stated, that if the defendant had continued to occupy it, it would have fallen down. It was held, that unless there had been some fraud or improper concealment, the contract for letting was perfectly good. The rule laid down by Tindal, C.J., in Izon *v.* Gorton, 5 Bingh. c. 501, was approved of, viz., that when the tenant had been allowed to withdraw himself from the tenancy and to refuse payment of rent, was either when there was error or fraudulent misdescription of the premises which were the subject of letting, or where the premises had been found to be uninhabitable by the wrongful act or default of the landlord himself.—(Arden *v.* Pullen, 10 M. & W., 321.)

4. If the landlord agrees to do the repairs by a certain day, and they are not executed by that day, the tenant may decline to take possession. Thus, where an agreement was made by which the plaintiff agreed to do certain work by the 14th of June ensuing, namely, that the stairs of the kitchen should be less steep, a greenhouse to be erected, a bath to be divided from the other part of the room when the intended tenant should require, bells to be hung and finger-plates affixed to the doors as might be required by the intending tenant, and water to be laid on, &c.; and in consideration of these conditions being fulfilled, the defendant agreed to take the house for three years, at an annual rent of 130*l.*, and the plaintiff did not complete the whole work necessary by the 14th of June. It was held, in an action by the landlord on an alleged breach of the agreement, because the defendant did not become tenant to the plaintiff on June 24th, that there was a breach of a condition precedent by the landlord, and that the defendant had a right to stipulate for a particular day. It was a reasonable stipulation, as many things were to be done between the completion of a building and actually entering on it. Judgment was given for the defendant.—(Tidey *v.* Mollett, 4 N.R., 109; and S.C. 10 *Law Times* R., 380 N.S.).

5. A landlord may, by a parol agreement in writing, contract with a tenant that the tenant shall do repairs by a certain day, and that if not done he may re-enter. Thus an agreement was made January 21, 1863, by which it was contracted, that when the defendant (the intended tenant) should have executed certain repairs, and built certain rooms, the premises should be demised to him for thirty-five years from December, 1862; and such lease was to contain covenants to keep in repair, &c. The repairs were to be done by June 24, 1863, and there was a proviso for re-entry. The defendant entered and paid rent, but he did no repairs by the day named, that is, by June 24, 1863. (See Connoch *v.* Jones, 18 L. J., 204.) The landlord brought an action of ejectment, and the court sustained a verdict in his favour. Though the agreement was not under seal, the word "covenant" was held to apply to any solemn agreement whether under seal or not. It was held that as the landlord had his remedy without ejectment by giving six months' notice, but it was held that as the landlord desired to have a tenant for a long term it would be an unjust conclusion. "We will read, said Byles, J., the word 'covenant' according to the effect given to it in ancient and modern documents from the celebrated covenant for thirty pieces of silver to the present time." The tenant had judgment given against him.—(Hayne *v.* Cummins, 4 N. R., 61; and S. C. 10 *Law Times* R., 341 N.S., Q.B.)

6. When the landlord agrees to put the premises in good tenantable repair and condition, and the tenant agrees to maintain and keep them in that state, and to deliver them up in such state at the expiration of the tenancy, the landlord must first put them in repair in order to charge the tenant on this account. Where the breach of the agreement was alleged to have been that the tenant did not keep and deliver up the premises in good repair, it was held it was a precedent condition that the landlord should put them in repair, and it was not a divisible condition, and therefore putting them in repair in part did not entitle the landlord to recover for a breach of the agreement as to that part.—(Neale *v.* Ratcliffe, 20 L. J., 130 Q.B.).

7. If the landlord lets a house conditionally to furnish it or to do certain repairs, and the tenant enters into the occupation of the premises before such acts are performed by the landlord, and the landlord fails to perform them, he (the landlord) though he may sue for the use and occupation of the premises, cannot distrain for the rent payable under the special contract. Thus, in an action of trespass, where the plaintiff had agreed with the agent of the landlord to take the house of the defendant, and the house was to be furnished, and the rent was to be 170*l.* a year, the house was only finished in part, but the agent said it should be completely furnished, without fixing any time. The plaintiff was let into possession, and at the end of a quarter was distrained on for rent. The furniture had not been sent in as promised. The tenant brought an action of trespass, and the question which was rightly put to the jury was, whether the agreement to pay the rent was absolute or on condition only of the furniture being sent in. There was evidence to find it to be conditional only, and the jury so found. The distress, therefore, was not justified.—(Mechelen *v.* Wallace, 7 Ad. & Ellis, 54.)

So, again, in the case of Regnart *v.* Porter, 7 Bingh. R., 451, which was an action of replevin, the tenant entered into the possession of the premises under an agreement for a lease at 25*l.* a year for sixty years, and the defendant agreed to do certain repairs; but he never completed them, and the tenant never paid rent. The tenant said he was ready to pay what was due, provided certain improvements agreed on were completed, and an allowance made to him for the expense of certain repairs he himself had done. It was held that a demise at a rent certain could not be implied under the circumstances so as to entitle the landlord to distrain. The question was, whether the plaintiff held as tenant of the defendant at a rent certain; for, unless he were tenant at a rent certain, his landlord had no right to distrain. Four years' rent were in arrear. If an action for use and occupation had been brought, as it might have been, then a jury might have given a less sum than that reserved in the lease. The distress, therefore, was not justified.

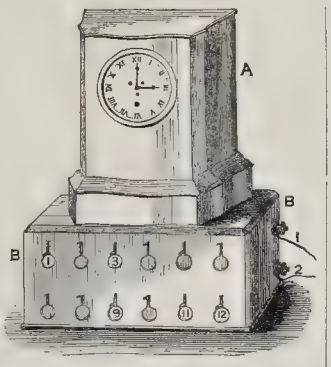
8. If the tenant enters into possession of the premises, and the repairs the landlord has agreed to execute are not done, the tenant cannot refuse to pay for the occupation of the premises on this account, though the landlord may not be entitled to recover the whole sum agreed on as rent. In the case of Smith *v.* Eldridge, 23 *Law Times* R., 270, heard before Mr. Justice Williams, in June, 1854, there was a signed agreement for a lease, but no lease was executed. The defendants did not themselves occupy, but underlet the premises. The rent was to be 55*l.* until a license for a public-house was obtained, and afterwards it was to be 65*l.* The certificate of the licence was admitted as evidence that the licence had been granted. The defendant's case was, that by the written agreement "no rent was to be paid until the house was completed;" and as a sink, drain, and water-closet were in an incomplete state, no rent had accrued. It was objected that these deficiencies ought to have been specially pleaded. Williams, J., thought they might be shown in reduction of damages,

the action being for use and occupation. The jury were directed that the agreement did not preclude the plaintiff from recovering a reasonable sum of money for occupation, if the defendant chose to occupy the premises whether the alterations were made or not. A verdict was given for 30*l.* for the half-year. On June 3rd, it was by leave moved on the part of the defendant to enter a nonsuit on the ground that the ruling of the judge was incorrect, but the court above upheld his decision. The jury appear to have diminished the demand for the half-year [32*l.* 10s.] by the sum of 2*l.* 10s.

9. Even if the premises are destroyed by fire, unless there is an exception in such an event to discharge the tenant from rent, the tenancy and the liability to pay rent continue. Thus in the case of Izon *v.* Gorton, 5 Bingham, C. 50, the defendant was tenant from year to year, occupied a second floor, which during their occupation was consumed by accidental fire. It was held that, notwithstanding the destruction of the premises, he was liable to an action for use and occupation for the period which elapsed between the fire and the regular determination of the tenancy. The defendant was sued for 109*l.*, and to this sum of money the plaintiff was held to be entitled. The rooms of the defendant had become untenantable until the plaintiff had completed the repairs after about seven months interval from the time of the fire. If there had been an agreement in writing for a term of years no question could have been made but that the term of years continued to exist. (Baker *v.* Gottpzaffet, 4 Taun., 45.) A tenancy from year to year, until it is determined by notice to quit, is, as to its legal character and consequences, the same as a term for years. There was nothing done by the landlord to take away the continuance of the occupation or enjoyment of the tenant, for it would have been unreasonable to hold that the landlord's act in replacing the floor and repairing the walls of the defendant's rooms amounted to an eviction. If the landlord rebuilds and the tenant chooses to re-enter and continue his occupation of the new building, where seems nothing to prevent him, if no notice to quit has been given on either side; and if so, the obligation of each party must be reciprocal and the tenant must make satisfaction for the rent.

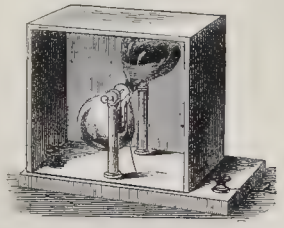
10. But if the tenant under a covenant to repair exempts himself from a liability to rebuild, he will not be exempt from the payment of rent unless there is a covenant containing this exemption. Thus in the case of Belfour *v.* Weston, 1 T. R., 310, a tenant covenanted to pay rent and to repair with the express exception of casualties by fire, he was held to be liable on his covenant for rent, though the premises were burnt down and not rebuilt by the lessor after notice. And in the case of Doe & Ellis *v.* Bedwin, 1 T. R. 705, under powers to lease on the "usual covenants" it was held that even such an exception that the rent should cease if the premises were blown down, or burnt, was not a usual covenant, and that power to lease was not well exercised.

11. If the landlord is bound to repair he must rebuild within a reasonable time. In the case of Green *v.* Eates, 2 Q. B., 225, and 11 L. J., 63, the lessor had covenanted to repair the external parts of the house demised. This covenant was held to comprise the boundary wall of an adjoining house. The lessor was liable to repair and to compensate the lessee for damages sustained by him in consequence of the adjoining house being pulled down under the provisions of a local Act of Parliament. The dividing wall gave way and sank, and damage was done to the premises demised. The landlord was liable to an action for non-repair, although a reasonable time has not elapsed to do them, on his direct refusal to do repairs. The tenant could not, however, recover as damages the rent paid by him for the occupation of another house during the time the demised premises were uninhabitable, or the expenses incurred in making other premises fit for his habitation. In the case of Pindar *v.* Arnsley, 1 T. R., 312, the plaintiff sought to recover possession of some houses which had been burnt down and rebuilt by the landlord. The action was brought in 1767. In March 1763 the premises were worth nothing in consequence of the fire, and the tenant had paid no rent from the time of the fire. They were, in fact, worth nothing. The landlord might have continued to exact rent from the tenant; and the question put to the jury was, whether it was not to be presumed the tenant had abandoned the lease at the time of the fire, and the jury so found for the defendant.



12. A tenant has no equity to compel his landlord to expend money received from an insurance office, on account of his premises being burnt down, in rebuilding the premises, or to restrain the landlord for suing for rent until the premises are rebuilt. There being in the lease no exception as to the event of accident by fire, the plaintiff at law continues to be bound to pay his rent. The plaintiff having covenanted to pay his rent during the whole continuance of the lease is not entitled to any suspension of the rent during the time which may be occupied in the rebuilding and restoring the premises. The plaintiff, in his lease, might have provided for the contingency.—(Leeds *v.* Chatham, 1 Simons, 146.)

13. And lastly, in an action of covenant for rent by a landlord, the defendant cannot set off any uncertain damages that he may be entitled to recover against the landlord on any of the covenants of the lease, though the defendant had actually expended the money (30*l.*), which was his claim against the landlord.—(Weigall *v.* Waters, 6 T. R., 488.)



THE ELECTRIC TELL-TALE.

THE accompanying engravings give an external elevation of a very simple and ingenious tell-tale, invented by A. W. Willoughby Smith, and manufactured by Mr. T. Sax, of Great Russell-street, Bedford-square. The principle of its action is simply this:—Let us suppose that in different parts of a large establishment, instead of expensive clocks, a number of old-fashioned hour-glasses were placed: let us suppose, further, that the watchman in going his rounds should turn all these glasses within the hour. It is obvious that, if any means could be devised by which the turning of each glass before it was run out could be registered, all the purposes of the best watchman's clock would be fulfilled. This registration is what Messrs. Smith & Sax effect, but the registration takes place in the head office of the firm, and it is a matter of impossibility, in consequence, to tamper with the record.

An apparatus is affixed to an ordinary clock, A, fig. 1, so constructed as to communicate by

means of electricity with certain small boxes, one of which is shown in fig. 2, placed in differ-

ent apartments or districts of a building requiring to be visited. The watchman is provided with a small key, by means of which he sets the sand glasses each hour: by so doing he completes a circuit which would otherwise be broken by the ascent of the glass from an inclined to a vertical position, by the change in the position of the centre of gravity, consequent on the fall of the entire quantity of sand into the lower glass.

Beneath the clock is placed a stand or base, B, fig. 1, in the lower part of which are twelve apertures corresponding to the hours, marked on the dial above. In each of these is placed a small German silver slide, marked 1, 5, 10, &c., up to 12. The clock is placed in the master's private office, and the operation of the entire apparatus is as follows:—So long as the line is complete a label will drop into view as the hour-hand of the clock reaches each figure on the dial; but the circuit cannot be kept complete unless the hour-glasses, which are shut up in locked boxes, are turned regularly: thus the neglect of any one hour is registered by the non-descent of the corresponding label. It matters not if out of twenty glasses nineteen are in contact, the failure of the twentieth is inevitably registered.

If the wires are tampered with a bell is set ringing in the office, until attention is attracted and the wires set right.

This electrical tell-tale is applicable to a number of purposes. It can be used on board ship. At railway-stations it can report the vigilance of outlying signal-men. In fire-engine stations, breweries, factories, mills, docks, or warehouses, it is likely to prove equally suitable.

CHURCH-BUILDING NEWS.

Chilham.—The parish church has just been re-opened after being restored at the expense of Mr. Charles Hardy, excepting the repairs to the roof of the middle aisle, which was done by subscription. The chancel is new, with a wing on each side, and a new window. The north transept has had a new roof, while the south one has been repaired. A ringing-loft has also been added, with a gallery for the Sunday-school children in the belfry. The mausoleum has been removed, and the coffins placed in a large vault near the church, while a tablet is erected in the chancel. The work has been performed by Messrs. Myers & Co., of London.

Chesterton.—Mr. Young, merchant, and many years mayor of Wisbech, on the application of the committee for the restoration of the church, has agreed to supply the timber required, at prime cost. The restoration of the south aisle is progressing.

Pidley.—The foundation stone of the new church at Pidley, one of the three parishes attached to the Regius Professorship of Divinity at Cambridge, has been laid. The building is under the superintendence of Mr. Fawcett, of Cambridge, architect.

Schuckburgh (*Warwickshire*).—Saint John the Baptist Church, Schuckburgh, has been consecrated by the Bishop of Worcester. The church, which stands nearly on the site occupied by the former one, is built from the design of Mr. Crofts, of London. It is in the style of the Transition Period from the Early Pointed to the Byzantine, the former style being, on the exterior, conspicuous on the southern side, while the Byzantine is recognizable in the windows of the north aisle. The interior of the building may be said to be Byzantine entirely. The chancel is lighted by an east window of three lights, immediately under which, and behind the communion table, is a carved reredos of Bath stone, the pinnacles at either end being ornamented with the grape-vine and passion-flower. The roof of the chancel is formed by groined stone arches, the interstices being filled with a brown and white ground-work, having the appearance of terra-cotta, but, it is said, manufactured in the village. The body of the church is lofty, the roof being a boarded timber one, with principals springing from carved stone corbels, and bearing ornamental wood bosses. The side aisles are separated from the body of the church by pillars and arches of stone and ornamental brickwork, the northern aisle having two-light Byzantine windows, and the southern aisle three- and four-light Pointed windows. The bell-turret, with small spire, is over the southern entrance-porch.

Stoyursey.—Extensive repairs and restorations are now in progress in the old Norman church of St. Andrew, in this parish, from designs of Mr. John Norton, of London, architect, by Mr. W. Brock, of Bristol, builder, under the superintendence of Mr. G. Salmon, the clerk of the works. The repairs of the tower and spire are nearly completed. The latter has been recased and covered with lead as before, the former strengthened, and the old Norman windows opened and restored to their original dimen-

sions; also the top of the tower surmounted by a traceried parapet of Bath stone. A Norman east window of three lights, to be filled with stained glass, has been erected in the chancel, and several other new windows in the nave and south transept. The funds for the restoration are estimated at about 4,000*l.* The contract for warming the church has been taken by Mr. Haden, of Trowbridge: the vaulted chambers and all other preparatory arrangements are already finished.

Yarpole (*Herefordshire*).—The church here has been enlarged northwards by the erection of a new aisle, separated from the nave by an arcade of four bays. The shafts and arches are formed in alternate courses of freestone and stone quarried in the neighbourhood at Luston. The whole of the interior ashlaring has been cleaned, restored, and pointed; the roof opened, stained, and varnished, and strengthened by king-posts; the floor laid with black and red Staffordshire tiles; and the old boxes have given place to open stalls of red deal, stained and varnished. Externally, a new porch has been erected, and the whole church covered with Broseley tile; the plaster and whitewash have given place to the original ashlar; and the windows are again filled with tracery. The new aisle is spanned by a lean-to roof, and is lighted by four three-light windows on the north side, and by a two-light window at its eastern and western terminations. The present restoration of the nave has been effected for 1,500*l.* The architect was Mr. Scott; and the contractor Mr. Smith, of Tenbury.

Hereford.—The foundation stone of a new church has been laid at Tupsley. The total cost of the church will be something like 2,300*l.*, and the existing deficiency in the funds amounts to about 600*l.* The church has been designed by Mr. Kempson, of Hereford, architect, and the contract for its erection has been taken by Mr. Joseph Mason, also of Hereford. The edifice, which will be in the Early Decorated style of architecture, will accommodate a congregation of upwards of 500, and is to consist of a nave, north and south aisles, chancel, and vestry. The tower at the south-west angle will be surmounted by a lofty spire: the building will be surrounded by a churchyard of ample area; and the rest of the site will be appropriated to the erection of the parsonage, and a schoolroom.

Rhayder.—The foundation stone of a new church has been laid at Rhayder. The church is intended for the accommodation of the parishioners of Cwm-toy-ddwr. Mr. F. R. Kempson, of Hereford, is the architect; and Mr. J. Mason, also of Hereford, the builder.

St. David's (*Pembroke*).—The building committee of the cathedral have had open tenders for the restoration of different portions of the edifice, sent in by six experienced builders.

Leicestershire.—"Great attention now appears to be given to the repair of churches," says the *Leicester Advertiser*. "The following are being repaired in this district:—*Slawston* [This church we have already spoken of]. *Great Easton.*—The tower and spire of the church at this village is about to be taken down and rebuilt. Mr. Loveday and Messrs. Stanyon & Son are again the contractors. Mr. E. Christian, of London, is the architect. *Weston by Welland.*—At this small village the old church, tower, and chancel have been taken down, and are about to be rebuilt. This church was in a most wretched state. There is some beautiful stone-work about it. Mr. Hussey, of London, is the architect; and Messrs. Stanyon & Son and Mr. J. Loveday are the contractors. These parties have also restored Kibworth Church, Stonton, Bringhurst, and Sutton Bassett."

Birmingham.—The chief stone of a new church has been laid in Bissell-street. The new edifice will accommodate about 800 persons; and if the necessary galleries can be erected, there will be accommodation for nearly 200 more, nearly all free. The church will be from a design by Messrs. Martin & Chamberlain, and will consist of tower, nave, aisles, transepts, chancel, vestry, choir, and clerestory. The principal entrance will be in the west end, under the tower, and there will be an entrance at the side of the tower also. The walls will be of red brick, but all the apertures will be faced with stone.——The memorial stone of Immanuel Church, Broad-street, has been laid. The new edifice is being erected on the site of Magdalen Chapel. The body of the church is on plan a parallelogram, 72 ft. 6 in. by 44 ft. (exclusive of the chancel), and is divided in its length by two rows of light iron columns, which support the galleries that are carried along the sides and west end. The large span of the roof is divided by iron columns over those supporting the side galleries to receive hammer-beams, from which longitudinal and transverse arched braces are carried. All the iron columns will have wrought-iron foliage to caps. The height from the floor to the ridge is 52 ft. The chancel is 20 ft. by 17 ft. 6 in., on the north side of which and adjoining is the vestry, with organ-gallery over. At the west end an enriched triple-arched entrance, supported by serpentine marble columns with carved caps, opens on to the vestibule leading to the body of the church and to the galleries. This entrance is covered by carved and crocketed gables. The staircases leading to galleries are made to form ornamental features in the front, that on the north side being finished with a cornice and a parapet of open traceried work; while the other is carried up as an octagonal turret, surmounted by a spire 90 ft. high. On account of the confined nature of the site, houses abutting on the sides, the usual method of obtaining light to ecclesiastical structures could only be followed at the east and west ends: a five-light window has been introduced at the former, and a large seven-light window, 14 ft. 6 in. wide, and 22 ft. high, at the latter. These, however, would be by no means sufficient for the large area to be lighted: roof-lights are therefore introduced at intervals on each side. The style of the building is Decorated Gothic. The timbers of the roof will be exposed, and, with the benches, which will be open, will be stained and varnished. The walls will be built of bricks, faced externally towards Broad-street with Wilncote stone and Bath stone for the windows and moulded and carved work and dressings generally. Internally the walls will be plastered, and the floors laid with tiles in patterns. The building is to be warmed by Haden's warming apparatus. Accommodation will be provided for 488 adults on the ground-floor, and 428 adults and 179 children in galleries, making a total of 1,095 sittings. The architect is Mr. Holmes, and the builder Mr. Wilson. The total estimated cost, including the site and the old chapel, is 4,400*l.*, towards which 2,850*l.* have been subscribed.

Market Harborough.—The Langton or Hanbury charities have lately had new trustees appointed to them. The present church requires a thorough restoration, and the trustees are empowered to expend a sum for that purpose not exceeding 3,000*l.* This church is to be at once restored, and the Messrs. Goddard & Son, architects, Leicester, are instructed to prepare plans and specifications. As soon as they are prepared, and the necessary arrangements made, the work will be proceeded with. The trustees have also the power to remove the mausoleum in the churchyard, where there are deposited some half-dozen coffins, and among them the remains of the founder of the charity. If the mausoleum be removed, a vault is to be made in which to deposit the coffins. The churches at Thorpe Langton and Tur Langton are each to have 1,000*l.* expended upon them in restorations. The latter church is in a very dilapidated state, and, it is expected, will have to be entirely rebuilt.

Ancoats (*Lancashire*).—The foundation-stone of St. Jude's New Church, Ancoats, has been laid. The new building, the site of which is at the corner of Mill and Kirby streets, is intended to be substituted for the present church. The proposed church in design may be classed under the Early Gometrical. The material is brick. The plans combine a tower to the south; nave and aisles which are unobstructed by pillars, and afford a clear view throughout; north and south transepts, and a chancel. The transept and west end of the nave are galleried. The chancel is lighted on the east by a circular window, and on the north and south by clerestory lancets. The nave, in contrast with the chancel, has in its west gable a five-light traceried window. The roof is to be in one span, the thrust being resisted by external buttresses. The exterior of the building will have its surface relieved by stone where rendered constructionally necessary, and by bands of blue and white brick. Further relief will be gained in the door and window arches by peculiarities in radiated blue, red, and white bricks. The slating of the roof is to be in alternate bands of blue and green, ridged with ornamental cresting. The tower, with its surmounting spire, will, like the rest of the exterior, be of seconds bricks, with banded broachings and pierced stone strings. The contract will be carried out by Messrs. Clark & Jones, under a guaranteed estimate of 4,200*l.* The heating apparatus will be supplied by Messrs. Haden & Son, of Trowbridge. The whole cost, including the purchase of the land, it is estimated, will amount to 5,400*l.* The church will have 1,200 sittings, 547 free. The whole of the works will be carried out from the design and under the superintendence of the architect, Mr. John Lowe, of Manchester.

Over-Darwen.—The new church of St. John Over-Darwen, built at the sole expense of Mr. and Mrs. Graham, of Turncroft, has been consecrated by the Bishop of Manchester. The church may be described as Gothic of the thirteenth century. It is built wholly of stone quarried in the neighbourhood. In extreme length it measures 145 ft. from east to west, and 70 ft. across the transepts. The church, which will accommodate 750 people on the ground floor, and has a nave, north and south aisles, north and south transepts, tower and spire at the west end, and a large chancel, with semi-octagonal termination. The chancel ceiling and eastern wall have been painted by Messrs. Lavers & Barraud, of London and Manchester. The architect is Mr. E. G. Haley, of Lancaster.

Bolton.—At a recent meeting of the committee for the rebuilding of the Bolton Church, a letter from Mr. Stephen Blair, of Mill-hill House, formerly M.P. for Bolton, was read, offering to subscribe 1,000*l.* forthwith, provided nine other gentlemen would do the same. That would raise 10,000*l.*,—half the amount required. A gentleman, however, who is said to be largely interested in the staple industry of the town (Mr. Peter Ormrod, it is believed) has informed the committee of his intention to rebuild the parish church at his sole cost; the plans to be submitted to the committee. The estimated amount required is 20,000*l.*

DISSENTING CHURCH-BUILDING NEWS.

Tombridge.—The new Union chapel here has been opened. The cost of the erection has amounted to over 650*l.* The building is from designs by Mr. Wheeler, of Brenchley, architect, and is constructed to hold 300 persons. It is built of the cheapest materials, though with some architectural effect. The ground floor is a parallelogram, 45 ft. by 36 ft. 6 in., and is divided into centre and aisles by two arcades of three arches, the centre aisle being extended eastward beyond the arcade to form a sacrarium, which is raised three steps from the floor of the nave. The doorways are at the east end of the side aisles, and the entrances are to be connected with the house by an iron screw work, forming corridors for the approach of the inmates to the chapel. The material of the building is stock brick, bonded with red for the exterior, the walls being lined with red brick bonded in black. The west gable is surmounted by a bell-cot for one bell. The roof is of deal, stained, and plastered between the rafters, except that of the chancel, where it is of panelled woodwork. The seats are plain, stained, and varnished. The painted glass, in the rose window, was given by Mr. Hughes, of Soho-square; and that in the circular openings by Mr. R. Wheeler, the architect.

Eastbourne.—The new Wesleyan chapel in Pevensey-road has been opened. The edifice, which occupies a favourable position in Pevensey-road, is in the Continental Gothic style of architecture, from designs by Mr. R. K. Blessley, of London and Eastbourne, architect. It has been constructed of flint with Bath stone dressings, by Mr. Stonestreet, of Hailsham, the contractor. The windows are filled with Hartley's cathedral glass. The seats (stained and varnished) will afford accommodation for 430 persons. The floor of the chapel has been so constructed as to give a rise of 18 in. from the pulpit to the main entrance. Additional ground has been secured for the erection of a schoolroom and a minister's house.

Wolverhampton.—The memorial stone of a new Congregational church has been laid, in Queen-street, in place of the old Independent chapel. The edifice is being erected by Messrs. Trow & Sons, of Wednesbury, from designs furnished by Mr. Bidlake, of this town. The structure now being raised is on the site of the old church and school-room, together with an adjoining house. The style is Italian, freely treated. The outside dimensions are 90 ft. by 70 ft., affording accommodation for nearly 1,300 persons. The floor of the chapel will gradually incline towards the platform. There will be a large platform at the south end, 20 ft. long by 12 ft. wide, raised above the floor of the chapel upon wheel stands, the pulpit, with the com-

nion table, placed in front. Under the chapel large lecture-room is provided, capable of ommodating 400 persons, adjacent to which a deacon's vestry, also a minister's vestry, vision being made under the front entrance a chapel-keeper's store-room, heat-chamber, lls, &c. The principal front, next Queen-het, consists of two side wings. The centre is vided with a large circular-headed Venetian dow, enriched with ornamental metal-work, h is surmounted by an ornamental balustrade pediment. The side wings contain the ery staircases, having entrances correspond-t to the centre one: above the one next rket-street rises a tower and spire to the ght of 110 ft., the upper stage having an ded two-light window, above which rises an agonal spire. The front next Market-street, ve the basement, has two tiers of semicircular dows, carved as triplets, and the upper por-a enriched with pilasters and columns of ne in the window-jambs, and surmounted by rnice. The plan of the interior of the chapel a parallelogram, with nave and side aisles.

Nottingham.—The foundation-stone of a new apel and schools in connexion with the United thodist Free Church, has been laid in Great ford-street, on a site acquired for the purpose. e building is to be called Great Alfred-street apel, and is from designs furnished by Mr. omas Simpson, architect, Nottingham. The ilding, which is of brick and stone, will have essed Bulwell stone basement story, forming linth to the superstructure, and is about 62 ft. g by 46 ft. wide in external dimensions. It three tiers of windows at either side, and in front. The pewing of galleries and ound floor, which is disposed in the horse-shoe m, slopes amphitheatrically, concentring upon e forum under the gallery at the rear. The sement story is occupied in the centre by a hool-room, with convenience for 250 boys and ls, having separate ingress and egress, while e back and front are divided into a suite of ass-rooms for week-day communion. Contigu-s to the school-room is also a kitchen, with tea ppers and apparatus for the convenience of cial festivities. Abutting upon the kitchen, at e rear, is a minister's retiring-room, with a ivate approach and a flight of steps leading m thence to the forum above. The chapel, th gallery, when complete, will afford accom-odation for between 600 and 700 persons. The incipal front to Great Alfred-street is ascended a flight of eight steps, 22 ft. wide, landing to a recessed portico, supported by columns four couplets, forming an open lobby, leading ght and left to the entrances of ground floor d galleries, and embraced by projecting angu-r towers, surmounted by mansard roofs with estings. The style of the building is modern alian, of Venetian treatment, and the cost will upwards of 1,500*l*. Mr. W. Holloway was e builder.

Liverpool.—The foundation stone of a new aptist chapel has been laid in Breck-road, verton. Messrs. Picton & Son are the archi-cts. The proposed building will consist a chapel measuring internally 66 ft. by ft., with an entrance vestibule 12 ft. wide d 50 ft. long, in which the staircases to the lleries are intended hereafter to be placed. At e farther end of the chapel, behind the pulpit, ere will be a semicircular apse from which ors communicate with the vestries. In the se is placed the baptismal font, which extends ck the full depth of the recess, having a flight steps leading down into it opposite the door each vestry. There will be two vestries hind the building, each 17 ft. by 15 ft. he exterior of the building will be of a plain aracter, the decoration being confined to the enings. The building will be of brick, with essings of Stourton stone, the windows having oved jambs in stock brick, with semicircular ched heads. Bands of stock brick are also rried round the building at intervals. The hool-room will be placed in the rear of the apel. It will be 50 ft. long by 27 ft. broad. he cost of the building and fence-wall will be out 4,200*l*.

Hexham. — The new United Presbyterian hurch at Hexham has been opened. The struc-ure is a stone building in the Gothic style of rchitecture. Mr. Oliver, of Newcastle, was the rchitect; and Mr. J. Ridley acted as clerk of he works. Accommodation has been provided or 400 persons in sittings of open benches, and dditional sittings can be obtained by the erec-ion of an end gallery, for which provision has lready been made. The contractors were Mr. Bulman, masons' work; Mr. Snowball, joiners' work; Mr. Beck, slaters' work; Mr. Oliver, plasterers' work; Messrs. Pattinson, Davison, & Spencer, iron work; and Mr. Wilson, plumbers' work.

STAINED GLASS.

Peterborough Cathedral. — A stained-glass memorial window has just been erected in the north transept of Peterborough Cathedral, by Mr. G. W. Johnson, of that town. The subjects chosen are, in one light, a life-size figure of Our Lord as He appeared to the disciples on the seashore, with large folds of diapered and coloured draperies. The other compartment represents Our Lord appearing to St. Thomas, and telling him to thrust his hand into the wounded side. Both compartments are surmounted with canopies. The window was executed by Messrs. Cox & Son, of London.

Lavenham Church (*Suffolk*).—Another stained-glass window (the great east window of the north chapel) has just been placed in this church, at the expense of Mr. F. Thompson. The window, which has been executed by Messrs. Lavers & Barraud, contains ten large lights, which are occupied by two subjects—the upper five by "The Raising of Lazarus," and the lower by "The Marriage of Cana in Galilee." In the former are nineteen figures, nearly life-size. The moment chosen for representation appears to be that in which Jesus says, "Loose him and let him go." In the representation of the Marriage Feast are fifteen figures, of a like size, the time represented being when the first of the new wine is drawn by the servants and presented to the governor of the feast. Above the ten principal lights are eight smaller ones, each of which contains a full-length figure about 2 ft. high, bearing scrolls on which are written Christ's answer to the messenger of John (St. Matt. xi. 5).

Allesley Church (*near Coventry*).—A stained-glass window has just been erected in this church, by the Rev. C. Gibson, the subjects being taken from the Book of Ruth, viz.—"Naomi's Return," "Ruth cleaves to Naomi," "Ruth gleaning," "Boaz and Ruth's Kinsman," "The Feast," "Naomi nursing Obad." Messrs. Heaton, Butler, & Bayne, of London, executed the work.

Albury Church.—An east window, consisting of two lights, has lately been painted for Albury Church, Surrey, by Lady Rokewode Gage, in memory of Mr. Henry Drummond, M.P., and Lady Harriet Drummond. Two medallions contain the Crucifixion and the Resurrection, with a ruby background. In and below the former the passion-flower is freely introduced, while in the latter the lily is substituted: the windows are filled up with foliation in which the vine bears a prominent part. The glass was prepared and burnt by Mr. A. Gibbs, of London.

Tarring Church.—Four memorial windows have been placed by Messrs. Baillie & Co., of London, in the four lancets in the south aisle of this church. They were presented by Mr. C. Peachy, of this place, and Messrs. Roberts & Fowler, of Worthing. The subjects of the memorials are the four Evangelists.

Fordingbridge Church (*Hants.*)—The chancel of this church has lately been enriched by the insertion of a memorial stained glass window, in one of the Early Pointed lights on the south side, the one nearest to the east end being adopted for this purpose. The subjects are illustrative of the last verse of the 7th chapter of the Book of Revelations: "For the Lamb which is in the midst of the throne shall feed them, and shall lead them into living fountains of waters, and God shall wipe away all tears from their eyes." These are treated in three separate groups. That at the top represents the Lamb on his throne, surrounded by the heavenly host leading groups up to the "living fountains of waters;" and beneath all this is shown the miracle of "Feeding the Five Thousand," typical of the connexion of the earthly and heavenly portions of the kingdom of the Lamb. The backgrounds are jewelled and mosaic. The Scriptural text is so contrived as to be seen throughout the window on each subject respectively. The window has been erected to the memory of the late Major Brice, by his widow and children. The work has been executed by the Messrs. O'Connor, of London.

The Maison Dieu, Dover.—The Town-hall has been enriched by the addition of another window to the series with which it is proposed to adorn it. The window just inserted is the gift of Mr. H. P. Mackenzie, builder, Charlton; and the incident represented is one of the most remarkable connected with the history of Dover—"The Landing of the Emperor Sigismund at Dover resisted by the Duke of Gloucester"—in the reign of the Fifth Harry, as an inscription on it intimates; and at the base we observe the following:—"Presented by Mr. H. P. Mackenzie, the builder employed in restoring this Hall. A.D. 1862." The artist has represented the moment when the barons, headed by the Duke of Gloucester on horseback, are advancing with uplifted swords. The Emperor Sigismund is seen standing on the forepart of the ship which is hung round with shields bearing alternately the arms of France and of the Empire. The window was executed by Messrs. Heaton, Butler, & Bayne, of London; and designed by Mr. E. J. Poynter.

St. Peter-Port's, Guernsey.—The east window of St. Peter-Port Church, has been reglazed with a stained-glass representation of the Resurrection of our Saviour, by Messrs. O'Connor. The following is the inscription:—"Margaret Berthe, only surviving child of Adolphus Carey and Frances Delrymple his wife, born the 18th of June, 1830; died 29th January, 1862, aged 31. This window is erected to the loved memory of her child by a widowed mother. 'She is not dead but sleepeth.'" The lower centre light consists of angels sitting on the empty tomb: above these is the risen Saviour: on the right and left of the two angels are the guards; while Peter and John are gazing into the sepulchre. Six angels are seen on the right, and six on the left of the risen Saviour.

St. Jude's, Islington.—The three apse windows of St. Jude's Church, Mildmay Park, has been filled in with stained glass, consisting of nine figures, viz.—St. Mark, St. Jude, St. Matthew, St. Peter, the Saviour, St. Paul, St. John, St. Simon, St. Luke. The whole are richly coloured, and placed under canopies. At the base of the windows is the following inscription:—Erected by the congregation to the glory of God, and in memory of the Rev. Thomas Pitman, M.A., first incumbent of this church, who died 9th December, 1863. The windows have been executed by Mr. Charles Gibbs, of Marylebone-road.

ENGLISHMEN IN GERMANY.

Sir,—As there is much talk about the treatment of Englishmen in Germany, many *alarming* accounts having been circulated, evidently deterring numbers of my countrymen from coming here; I wish to bear my testimony to the courtesy shown me by all with whom I have come in contact.

As I do not speak a word of German, I am more particularly at the mercy of the natives. Perhaps this is in some respects an advantage, as many travellers one meets with possessing a smattering of the language are eternally squabbling over trifles, to show their intimate knowledge of it.

Martin Underwood.

Vienna.

NORTH-EASTERN DEFENCES, PLYMOUTH.

STRIKE AMONGST THE MASONS.

Sir,—It seems difficult to deal with the operative masons now-a-days. Lately, they struck at Plymouth for a large advance of wages, which after some time they obtained. They have now struck on the above works, because a notice was issued by the contractors that every one employed should pay 3*d*. per fortnight towards the maintenance of a surgeon. They have no objection to the contribution, and think it to be a very proper thing, but they do object to the word "shall," in the printed notice. "Shall" pay, they consider an act of tyranny.

N. J. T.

COMPENSATION CASES.

THE MAIN DRAINAGE.

A case was brought before the Hon. G. C. Norton (Lambeth Police Court), involving a claim for compensation against the Metropolitan Board of Works, for damage done by the working of a steam-engine in the progress of the construction of the main drainage.

The complainant was Mr. Herapath, carrying on a mixed business of picture-frame maker and cheap jewelry dealer, in the Old Kent-road. The damages were laid at 50*l*.

Mr. Shaw, barrister, appeared on behalf of Mr. Webster, the contractor for the main-drainage works; and the complainant was represented by Mr. Starke, solicitor.

From the evidence brought forward, it appeared that the engine used for pumping was placed near the complainant's premises; and in consequence of its continually working night and day, such a vibration was caused as to shatter several windows and glass-cases, and throw down and damage picture-frames and shelves of jewelry, doing damage to the extent claimed. In addition to this it was stated that the walls were cracked and split up in many parts.

Evidence was not heard on the defendant's side, but after a protracted inquiry it was agreed that 25*l*. should be paid to the complainant, and the case terminated.

Books Received.

The Church and Fortress of Dover Castle. By the REV. JOHN PUCKLE, M.A., Vicar of St. Mary's, Dover; Rural Dean: with illustrations, from the Author's drawings. Oxford and London: Parkers. 1864.

AT whatever time, and in whatever way, Christianity may have been introduced into this country, the old style of navigation renders it highly probable that Dover would be one of the first places in which its rudiments would be planted; and it is scarcely to be wondered at that an extreme age should be claimed for the foundation of such a church as that of St. Mary-at-the-Castle, Dover. That there are really good grounds for such a claim Mr. Puckle has ingeniously and clearly demonstrated. From a special and careful examination of the foundations, which he was authorized by the late Lord Herbert to make previously to the restoration of the church by Mr. Scott, it is Mr. Puckle's opinion that the church,—

"All but demonstrably dates from the closing Roman-British days of the FOURTH CENTURY, during the peace of the British Church after the Diocletian rage of extermination, and while our island Christians knew not how to hold too dear the memory of St. Alban, and all to whom 'it was given,' like him, 'not only to believe in Christ, but also to suffer for His sake.'"

In a notice such as this of Mr. Puckle's able volume the force of evidence in favour of his idea can scarcely be done justice to; but we shall select as complete a summary of his reasons as we can find in the volume and in the words of the author himself.

The plain and strong contrast between the (adjoining) Pharos, being of such well-defined Roman work, and the church, which consists of such different materials throughout, bars the likelihood of the latter having had any origin like that of the purer Roman works in Britain.

On the other hand, the whole aspect of the materials and workmanship is, nevertheless, *Roman-like*, with no affinities to the next distinctive period following, as we gather from the items of evidence, that may be thus taken in heads.

1. The concrete, or mortar, used in these walls resembles in many ways (?) that in the Pharos; being fine, hard, and mixed in similar proportions, differing much from that in the neighbouring remains of Saxon masonry.

2. The tile-brick, though changed in make and substance, is very strikingly used after a Roman fashion, as well as copied in manufacture: it is not easily detected as non-Roman at a superficial view.

3. The plan and execution of the foundations are better than anything belonging to Saxon times; evidently constructed by those who had better learned and practised this important feature of builders' work.

4. Nearly on this level the small portions remaining of the ancient floor exhibit a very peculiar method of laying down; and can but remind us, however roughly, of the way in which a Roman villa was paved, or a Roman high-road in Britain made.

5. The blocks of stone in many parts of the fabric not only far exceed in size any we find in the old Saxon masonry, but are put together in a manner not to be mistaken in its likeness to the work of Roman masons themselves.

6. And still more: these blocks, with a certain amount of smaller rubble, consist of a particular oolite, (now) foreign to this part of the country; a material which we find in connexion with Roman remains near at hand, but not with Saxon; and, as it characterizes most of the lower structure of these church walls, it seems to fix their period of foundation as being at least not far from days when Romans knew and used this stone, transporting it from some distance now unknown.

7. Lastly, the scale and character of the several members of the fabric, their proportions, and symmetry of construction, show no resemblance to those which undoubted Saxon buildings contain, and must be due to something surviving at least of that art handicraftship which had so long found its way from the imperial city even to this distant colony of the empire.

"Considering, therefore, the manifest differences between this and any work of genuine Roman type, the evidences it bears nevertheless of some kind of Roman instruction and example, and the entire isolation of all its features from the Saxons' rude and imperfect attempts, the period thus suggested within which we might fairly place the probable foundation of this church, would be somewhere during the decay of the Imperial power in Britain, and before the fall of Rome; which, after the close of the fourth century, left the country long a prey to the ravages of Northmen on the one hand, and Saxons on the other.

Our view becomes thus narrowed to some part of the fourth century -rather, perhaps, towards the middle than the latter portion of it For the historical character of those years, as given by England's primitive historian Bede, throws a colour of greatest probability on such having been the time when a church like this might most likely have been built on a site of strength and security like the Roman entrenchment at Dover."

Throughout the whole of the cruciform structure,—nave, chancel, transepts, and tower,—the same forms, materials, and workmanship appear; showing that beneath the changes of any subsequent times, the original work was one.

The true ground-plan was not ascertained without considerable works of excavation. The ground-line, as it used to be seen before commencing the restoration, was about 9 ft. above the present floor. It is hard to account for, except from wilful mischief and desecration; but the interior had become filled up with earth and rubbish to an equal level with the accumulation outside. So that, although it had not lain buried so deeply or so long, the church may be said to have been almost as much disinterred as those latterly recovered from the sands of Cornwall. The ground-plan, as at length followed out and carefully reduced to a scale, is annexed at the beginning of the volume.

From this it appears that the form of the church, though beautifully chosen and well-proportioned, was not laid down with any commensurate skill. It is like the work of men better able to imagine than execute; with whom arts and principles of working were imperfectly known, or had been forgotten. The lines of the building were so curiously set out for working, that there is not a true right angle among them: no two walls are perfectly parallel with each other.

"The two noble arches of the nave and chancel, of such lofty and really impressive proportion, nevertheless will not centre together; and neither member of the building can be made to range evenly co-ordinate with the rest. It exhibits a curious blending of the faults of a ruder age with the conceptions of one higher and better; and just what we might expect as a result of later British feeling and labour in the decline of what their Roman masters had once taught them.

Along the lines thus laid down, however, the foundations are deposited in a very strong and workmanlike manner, far more comparable to those of Roman than of any Anglo-Saxon construction. Rising from a depth about 5 ft. below the present floor, and at a uniform thickness of nearly 4 ft. all round, they come to a well-made offset regularly continued, internally and externally, from which the walls then rise at a thickness of about 3 ft., slightly lessened towards the top. Considerable care, too, is shown in the selection and placing of material where the great superincumbent weight is to be borne. Masses of stone are used, very different from those found in Anglo-Saxon buildings, reaching even as much as to 13 cubic ft. in size. Also the rubble-work is laid in comparatively close and regular course; and the joints of the more massive stones are fitted with a closeness and precision not unworthy of Roman masons' skill. Indeed, if we considered only the general look of these features in the work, it would at once suggest a doubt of its belonging to even the least rude and rough of Anglo-Saxon times."

The subsequent history of the church is next treated of by the author; but into this subject we need not here enter. We may remind readers that in earlier volumes of our journal will be found illustrations both of the church as it appeared in a ruined state, and as it now is. Though chiefly interested in the church, Mr. Puckle also gives an account of the ancient foundations and history of the castle itself, from its germ in the lofty earthwork whose rude rampart incloses the church and the Pharos which adjoins it.

VARIORUM.

THE *Giornale dell' Ingegnere - Architetto ed Agronomo* (Milan), reproduces excellently from our pages, by lithography, the view and plan we gave some time ago of Wycliffe Chapel, Birmingham, designed by Mr. Cranston, together with the descriptive particulars. Signor Pareto, the editor, says at the commencement of his translation:—*Noi prendiamo ad giornale inglese,* "The Builder," *perfettamente compilato e che gode grandissimo credito, la qui unita tavola per mostrare con quanta maestria e gusto artistico sappiano gli inglesi trattare lo stile gotico.*"——"A Manual on Earthwork." By Alexander J. S. Graham, C.E. (Lockwood & Co.) This very little book contains an investigation of principles necessary for the measurement and calculation of earthwork. A general formula is given for curving, which renders the use of tables unnecessary. The principal advantage claimed for the system is the correct estimation of excavations in sidelong ground.——To meet the wants of the Royal Agricultural Society last week in particular, and holiday excursionists in general, Mr. Reid has issued a shilling version of Dr. Bruce's "Handbook to Newcastle-upon-Tyne," of which, in its larger shape, we have spoken at some length. —— "Noble Dames of Ancient Story," by J. G. Edgar, is one of Messrs. Hogg's interesting series of books for young people, and relates pleasantly the story of Royal and eminent ladies who lived in the fourteenth century.—— "The Popular Science Review. No. 12. Hardwicke." The July number of this excellent periodical is of more than average interest. The leading paper is one on "The Aniline Dyes," by Dr. T. L. Phipson, illustrated with strips of silk, showing some varieties of these beautiful dyes. The editor, Dr. Lawson, gives an instructive and popular paper on "Oyster Culture;" Baron Liebig one on the "Action of Manures;" Mr. Lankester one on "The Old Red Sandstone Fishes of England;" Mr. S. J. Mackie one on "The Pneumatic Despatch;" and there are various others, besides the usual full and valuable scientific summary. In his paper on the "Pneumatic Despatch," Mr. Mackie describes the tunnel at the Crystal Palace, of which we have before spoken in the *Builder*. It is 9 ft. high by 8 ft. wide, and capable of containing the largest carriage of the Great Western Railway. The length is a quarter of a mile. The material is fine brickwork. The tunnel, with its closing-valves, has been completed. The fan-wheel, 21 ft. in diameter,—which will be temporarily worked by a fixed locomotive,—is erected and inclosed in its plate-iron case; and a model station has been formed, and a model carriage got from Manchester. The pneumatic pressure can be applied either behind or before the carriage; or, as Mr. Mackie describes it, either by the blowing or by the sucking process. The latter term, however, is somewhat objectionable, considering the erroneous hypothesis which it has always involved. True, sucking is a *very* natural process, however we may explain it; and it may be urged that the word is a useful one as descriptive of an actual process which is certainly in itself of the same nature as one of the pneumatic despatch processes, although mistakes about it did at one time prevail; but we suspect that the mistakes *still* prevail, and that it is, therefore, unadvisable to use it in a scientific paper, even though a popular one.

Miscellanea.

THE PRINCE CONSORT'S WINDSOR ASSOCIATION. After a temporary lapse of two years, the prizes usually given to the humbler classes at Windsor for industry, frugality, ingenuity, &c., by this association, have been again distributed,—on this occasion by the Prince of Wales. The devotion of the Queen to the memory of the Prince Consort has never, perhaps, been more touchingly displayed than in the simple circumstance that farm labourers, gardeners, coal-heavers, soldiers, and others rewarded on this occasion, were presented with certificates, signed with the royal autograph, to be hung up in their cottage homes.

HACKNEY NEW TOWN HALL.—The new town-hall project has advanced another stage. The committee last week received the following tenders for the building:—

	With Bath stone facings.	Extra for Portland stone.
Sewell	£8,954 0 0	£1,800 0 0
Downs	8,890 0 0	920 0 0
Perry & Jutson	8,785 0 0	930 0 0
Dove	8,445 0 0	1,500 0 0
Myers	8,355 0 0	
Sawyer	8,333 0 0	2,710 0 0
Macers & Son	7,835 0 0	1,100 0 0

We learn from the *Hackney Independent*, that the lowest tender—that of Messrs. Macers & Son, of Hackney-road—was accepted, and the committee decided not to go to the expense of Portland stone. The tender does not include the railing, which will cost about 500l.

A NEW BRICK FOR GARDEN WALLS. — Mr. Foxley, of Stony Stratford, has invented a new brick, ingeniously contrived for avoiding the necessity of nailing for training trees to garden walls. The brick has a projecting bead in the centre of the face, which is drilled with holes so as to admit of the passage of a piece of string or bass, with which the branch may be tied. One advantage of the bead is, that it admits of a free circulation of air between the plant and the wall, preventing the formation of mildew and rot and the accumulation of insects. The cost is said to be little more than that of an ordinary brick.

THE RE-PAVEMENT OF THE MINORIES.—Messrs. Brook & Sons, paviours for the City, have re-laved the whole of this much used thoroughfare with new cubes of Aberdeen granite, 4 in. by 4 in., laid upon a solid bed of broken stone and ballast, and grouted with lime concrete. Messrs. Parsons & Matthews were the foremen of the work.

LORD BUTE HOUSE, CAMPDEN-HILL.—This mansion (formerly the residence of the Marquis of Bute), with gardens and stabling, was sold, by auction, on the 14th inst., at the Westminster Palace Hotel, by Messrs. Mansell & Elliott; and although held for an unexpired term of only twenty-five years, and at a ground rent of 105*l.* per annum, changed owners at the sum of 11,000*l.*, his Grace the Duke of Rutland being the purchaser.

ACCIDENT.—Since the fall of a house wall in Kentish Town another has fallen in Somers Town, killing a boy. The portion of the house that fell is situate at 17, Lower Cambridge-street, Agar-street, and is one of a number in course of demolition for the formation of the Midland Railway Station. The deceased and his companions endeavoured to take out the cill of the back window, and in swinging it backward and forward loosened the bricks to such an extent that a large crack was made in the wall, and before they could get out of the way, it fell, burying the deceased under the *débris*.

TERRIBLE RAILWAY ACCIDENT IN CANADA.—About one hundred emigrants, men, women, and children, have been killed, and many more injured, at St. Hilaire bridge, on the Grand Trunk Railway of Canada, by the train running into an open drawbridge, and carriage after carriage falling into a canal, 70 ft. below the line of railway. The driver is under arrest, but asserts that from some cause he could not stop the engine, although the rule was to regard the drawbridge in approaching it to be always open, so that trains uniformly came to a complete stand near the bridge. The passengers were chiefly Germans, Poles, and Norwegians, in families.

CONSECRATION OF ST. SAVIOUR'S, PIMLICO.—St. Saviour's Church, Pimlico, a district for which has been created out of St. Gabriel's, Warwick-square, was consecrated on Saturday last week, by the Lord Bishop of London. The church—which at present is internally devoid of ornamentation, though much is intended when the funds will permit of it—is in the Middle Pointed style, and consists of nave, aisles, and choir. There are 1,140 sittings, of which 360 are free. The tower and spire are 190 ft. high. The architect was Mr. Thomas Cundy, who was also the architect of St. Gabriel's, Warwick-square, and St. Barnabas's, Pimlico. The church has cost about 12,000*l.*, of which sum the Marquis of Westminster has given 7,000*l.*, and the site; Mr. George Cubitt, M.P., 1,000*l.*; the Rev. J. Walker, the incumbent, 1,000*l.*; Mr. A. Cuthell, 500*l.*; Mrs. Cubitt, 100*l.*; and the War Office, 500*l.*

WATER FOR CREWE.—The well at Whitmore and the reservoir at Madeley, which the London and North-Western Railway Company have been constructing for some time at great cost, for the purpose of supplying their works at Crewe and the town with pure water, are approaching completion. The water main from the town is now laid to the reservoir at Madeley. The well is 12 ft. in diameter inside, and has been sunk about 80 ft. deep in the sandstone rock, with a bore-hole 18 in. diameter, 150 ft. below that. The reservoir will hold from 12 to 15 millions of gallons. An abundant supply of water has been secured, and it is said to be so pure that no filter beds are needed.

WET PAINT AND CRINOLINES.—In the Sheriffs' Court case, Levy *v.* Bartlett, a lady sued for 2*l.* damages, the value of a dress spoiled by wet paint in entering defendant's shop. There were no boards up to protect dresses, but a shopman called out "Beware of the paint" after the dress had touched it, and the lady in turning round at the warning got her dress still more damaged. The defendant maintained that the unusually large crinoline was the cause of the accident; but the sheriff said he could not punish a woman for wearing crinoline: plaintiff could reply that she was entitled to follow the prevailing fashion. If the tradesman wished to protect himself particularly he ought to put up a notice, "No ladies with large crinolines served in this shop." Verdict for plaintiff, with costs.

THE PARIS ANNUAL EXHIBITION.—From the accounts of the late Annual Exhibition of the works of living artists just published, it appears that the total sum taken at the doors was 110,000 francs. The Exhibition was open from the 1st of May to the 15th of June, deducting Sundays, when admission was gratis, thirty-nine days; this, at 1 franc a head, gives an average attendance on the pay-days of 2,820. The number of catalogues sold is stated at 28,000.

COMMERCIAL CALCULATIONS.—No. 2 of *Dunlop's Calculator* has been issued by Messrs. Houlston & Wright, of Paternoster-row. Its purpose, as a ready reckoner, is for the invoicing of goods by tons, cwts., qrs., and lbs., at prices from ½th of a penny to 10*l.* per cwt., or 200*l.* per ton; and *vice versâ*, for finding the cost or rate per cwt. or ton. We had occasion to speak favourably of No. 1, and we see no reason to form a different opinion of No. 2.

THE ROMANS IN GLOUCESTERSHIRE. — The Roman villa recently discovered on Lord Eldon's property, in Chedworth Wood, about two miles from Foss Bridge, up the Coln Valley, promises, it appears, to afford an example of a Roman residence of more than ordinary interest. It is now in progress of clearing, and already a suite of rooms, several of which are tesselated, have been discovered. Adjoining is a hypocaust. Along the whole front of the rooms, on a lower level, runs a corridor, about 8 ft. wide, with a flight of steps leading up to the rooms. This is also tesselated. In advance of the corridor are many other rooms, partly cleared out. It is intended to continue the excavations until a perfect ground plan can be drawn, exhibiting the entire arrangements of a Roman villa.

INAUGURATION OF THE ALBERT MEMORIAL, ALDERNEY. On the 12th instant, the memorial of the Prince Consort was inaugurated at Alderney. A committee having been formed on the 3rd of December, 1862, it was decided to erect a stone arch at the eastern entrance of the grounds attached to St. Ann's Church, and to purchase a pair of wrought-iron gates to correspond with it. This reads very much like killing two birds with one stone. The amount raised by the committee was 175*l.* The arch is in the Gothic style, surmounted by an ornamental cross, and bears the following inscription, in raised gilt letters:—"Albert. Erected by the people of Alderney, 1864." The stone was procured from Cornwall, and the execution confided to Messrs. Jackson & Bean, Mr. G. G. Scott being the architect. The gates bear the initials, gilded, "A. P." on the north, and "V. R." on the south sides.

COMPENSATION FOR DEATH BY A RAILWAY ACCIDENT.—Mrs. Torry brought an action against the North-Eastern Railway Company at the Newcastle assizes, on Saturday, to recover compensation for losses sustained by the death of her husband, killed through the negligence of defendant's servants. The deceased gentleman, a commercial traveller, who was only 35 years of age, and in excellent health, was travelling on the defendant's line, between Scarborough and Whitby, in February last; and, when the train was being lowered down the Goathland incline by means of a wire rope and a fixed engine, the rope broke, and the train dashed off with frightful velocity to the bottom of the incline, where the carriages were overturned, and deceased killed. The defendants had paid 1,500*l.* into court, and the verdict of the jury in favour of the plaintiff increased the sum by 50*l.*

COMPENSATION CASE.—SHOREHAM-ROAD TRUSTEES *v.* HEDGCOCK.—This case, which was taken in the Brighton County Court, is of some importance to those engaged in building operations at Hove. Mr. Merrifield appeared for the trustees, and Mr. Roupell appeared on behalf of Mr. Hedgcock, builder. The question for consideration was the amount of compensation which should be given by the Shoreham-road trustees to Mr. Hedgcock, for a piece of land (of 22 ft. breadth), on the road to the west of the Sussex Hotel, Cliftonville, which Mr. Hedgcock had lately purchased, and on which he had commenced building two houses. This piece of land the trustees desired to claim, so that the road on which a portion of the land abutted might be improved. The trustees originally offered 426*l.*; but this they subsequently reduced to 330*l.* On behalf of Mr. Hedgcock, Mr. H. N. Goulty estimated the value of the land, alteration of the buildings, &c., at 747*l.* 10*s.* A verdict was ultimately returned for the defendant for 550*l.*

IRON.—It is generally understood that the reduction of 1*l.* per ton on the various descriptions of finished iron will be accepted by the trade; indeed, it would be next to impossible for even the makers of favourite brands to stand out. At the same time, so much confusion prevails, consequent on the proceedings at the Birmingham meeting, that some time will necessarily elapse before matters settle quietly down.

THE DEFACEMENT OF THE CLONMACNOISE REMAINS.—We are very glad to learn from the Rev. Jas. Graves, the active and able secretary of the Kilkenny Archæological Society, that the society have resolved to bear the costs of prosecuting the despicable scoundrel who has defaced the ancient architectural relics at the Seven Churches, Clonmacnoise. At the petty sessions, held in Parsonstown, a young man, of the name of John Glennon, was brought before the magistrates on this charge, and the magistrates decided on sending the case for trial to the assizes. There are two witnesses, it seems, a boy and a girl, to the fact that the accused is the person who alone perpetrated the dastardly offence, although his companions swore that he did not do it. The accused is said to be a "respectable" person.

BLACKBURN.—Under the Public Works (manufacturing districts) Act there have been great activity and energy displayed at Blackburn. Twenty-three streets have been formed and paved complete, and ten more are in a forward state. About eleven miles of new sewer have been laid down, and extensive improvements have been made in the Public Park. During the past winter from 600 to 800 factory operatives have been employed upon these works, and the amount expended will not fall far short of 40,000*l.* The works are still being pursued without interruption.

THE BEST WHITEWASH.—Mr. Ritchie, a Boston (U.S.) master-builder, after forty years' experience, comes to the following conclusions respecting the best whitewash:—1. For rough outside walls—those exposed to the weather—the best mixture is clear lime and water. Any animal or vegetable substance diminishes the adhesion and durability of the wash. 2. But if the wall be hard and smooth, the wash is improved by a mixture of very fine sand—as much as will mix and can be applied. 3. For inside walls an addition of a little glue—say a quarter of a pound to three pailfuls—increases the adhesion. If it be desired to have the walls very white, the whites of eggs may be used in the place of the glue.

GOVERNMENT LOAN FOR THE WHITEHAVEN DOCK. At the last weekly meeting of the Whitehaven trustees, the secretary read a letter from the Public Works' Loan Commissioners, announcing that the Commissioners had agreed to grant a loan of 140,000*l.*, part of the loan of 150,000*l.* applied for by the trustees, on the security of a mortgage of the harbour revenues; such loan to be advanced by seven instalments of 20,000*l.*, at intervals of about six months, subject to the production of full specifications of the projected works, and satisfactory contracts for the execution thereof; besides other conditions. The first five instalments, with interest at 3½ per cent., must be repaid by forty-nine annual payments of 825*l.* each, and the balance of principal with all interest at the expiration of the fiftieth year from the date of each advance.

A NEW COOKING RANGE. — Batty & Steven have, at their warehouse, New Oxford-street, some cooking-ranges on a new principle, of their own invention, which, we believe, has not hitherto been made public. The upper bar of the fire-grate is increased in breadth, and placed in an angular position, so as to direct the air downwards upon the fire, thereby producing more perfect combustion. The increased heat, instead of being carried up the flues or chimney, which is the case where there is a close door in front of the fire, is thrown outwards, by which simple arrangement a strong roasting fire is obtained, and at the same time the oven, boiler, and hob-plate are heated in a superior manner. A 10-inch fire is said to be capable of roasting a joint of meat, and a 12-inch fire of roasting two joints. It is also found that the fire-bars last longer than usual; one or two sets, which have been in constant use for upwards of five years, being still almost as perfect as when first applied. The effects produced by this very simple change of form are certainly worth inquiring into.

METROPOLITAN TURNPIKES.—In the House of Commons, in reply to a question put by Viscount Enfield to Sir W. Jolliffe (as a commissioner of the metropolitan roads north of the Thames), Sir W. Jolliffe said that 25 turnpike gates and 54 side bars had been removed. The number of miles of road which had been given over to the parishes was 55: the number of miles which had been continued as turnpike roads was 67: the number of new gates was 9, and of side bars 8. The total number of places at which tolls were collected was now 31, in place of 93. There were now thirteen districts, and the gates had been placed in strict conformity with the provisions of the turnpike Acts, and the measure of last session, the 41st section of which gave power to any district to convert their roads into parish roads.

SOCIETY FOR THE ENCOURAGEMENT OF THE FINE ARTS.—On the evening of the 15th instant a *conversazione* was given by this society in the picture galleries of the South Kensington Museum. The principal business of the evening was the announcement of the awards of prize medals for the current season, as follows:—Painting.—History: Mr. J. Pettie, for his "George Fox refusing to take the Oath at Houlker Hall, A.D. 1663;" Genre: Mr. E. Nicol, for his "Waiting for the Train;" Landscape: Mr. G. Cole, for his "Harvesting in Surrey;" Water-colour Paintings: Mr. Walker, for his "Spring," and Mr. G. Shalders, for his "Evening near Dorking." Architecture.—Mr. Lamb, for his design for "St. John's Church, Carlisle." Poetry.—Mr. Robert Buchanan, for his volume of poems, "Undertones." The musical arrangements for the evening were under the conduct of Messrs. Benedict, Ganz, Schmeyer, and Van Noorden.

HOUNSLOW.—While the House of Lords and the press are rejoicing at the abolition of turnpikes, declared a nuisance by the Parliamentary Committee, the inhabitants of this little town, within ten miles of London, according to the milestones, have been dismayed by the erection of some of the abolished gates in their midst, at the intersection of the Staines and Bath roads, with side-bars in all directions. It appears as if the population were confined in a strait-waistcoat, or that the highwaymen of Hounslow Heath tradition had resuscitated in the toll-keepers, who stop all horsemen and vehicles with their "stand and deliver!" 2d. or 4d., as the case may be.

THE GREAT GAOL AT CALCUTTA.—In the Commons lately, Mr. Leslie asked the Secretary of State for India whether there was any foundation for the statements contained in a letter of the Indian correspondent of the *Times* regarding the condition of the great gaol at Calcutta, "that it is a den of iniquity, a sink of filth; that no one could inform the president of the sanitary commission how many prisoners died in the gaol; that the medical attendant could not say for certain what the mortality was; and that some prisoners have been murdered by the native gaolers in the attempt to extort bribes from them and their friends." Sir C. Wood, in reply, said that he had himself received no information on the subject, and he was, therefore, unable to contradict the statement. The last report was dated February last, and it contained this paragraph:—"We beg to state that the management of the gaol appears to be satisfactory." It was hardly likely, then, that the gaol could be in the condition described in the newspaper. We are not certain of that.

TRAVELLING ASSOCIATES.—As to company, two is the very best travelling number. It is good not to be quite alone in case of accident, even if the accident be no worse than a fly in your eye. Three is not bad, especially if two of the three (as two sisters) can occupy the same bedroom. The coupé of a diligence—a pleasant place—holds three. Four do well together under many circumstances, particularly if two rooms suffice. Four exactly fill a hired calèche (such as you would cross the Alps in by the carriage roads), dividing the expense conveniently. Five is a very awkward figure. After four, it is not "the more the merrier," but "the melancholier:" a fifth person is almost always one too many. But it is far better to be alone than to travel in uncongenial, capricious, exacting, selfish, or uncertain-tempered company. The choice of one's travelling associates requires great caution and consideration; for many and many have started friends who have returned quite the contrary.—*London Society.*

SURREY ARCHÆOLOGICAL SOCIETY.—A general meeting of this society took place last week at Sutton-place, Guildford, under the presidency of Mr. G. Cubitt, M.P. The members of the society and numerous visitors assembled from different parts of the county at the Guildford Railway Station, whence they proceeded to Sutton-place, where descriptive papers were read by Mr. G. Bailey, Mr. J. G. Nichols, F.S.A., and Mr. W. H. Hart, F.S.A. The mansion possesses many features of interest, particularly in the use of terra-cotta. It contains a large hall, in the windows of which is much painted glass, chiefly heraldic, of great interest. The property was granted to Sir Richard Weston in the reign of Henry VIII., and is now in possession of Captain Salvin. The company then left for Ripley, where luncheon was provided; and after that a visit to Ockham Park and Ockham Church, the architectural features of which were described by Mr. Hart. The remains of Newark Abbey were then visited, and described by Mr. Godwin-Austen.

DANGEROUS WINDOW-CLEANING. — A correspondent writes,—Although the present London season has nearly passed away, it may be allowed to mention a public disgraceful, occasional, practice of employing thoughtless or helpless servant girls to clean windows on the outside sill,—sometimes 20 ft. or upwards from the ground,—as I lately witnessed in St. John's-street, Clerkenwell,—which abuse caused the death of a fine young woman, about three weeks ago. The poor girls have sometimes no sort of safeguard, when standing upright, except putting their fingers within the windows. Of course, any sudden alarm in the street, even where there was presence of mind, might cause more than one death, including that of some person below. If women must be put to such masculine employment,—which in my country youthful experience was that of glaziers' men, on ladders. Even a belt round the waist, with cord fastenings inside, would be an improvement (an idea, possibly, available elsewhere). Of course the greater blame, as in heartless and shameful breach of the law, in still secretly employing "climbing-boys" for chimneys, lies with the master or mistress. The late "Father" of the House of Commons, Sir C. Burrell, proved a humane claim to that venerable title, by trying for Legislative interference shortly before his death.

A VITRIFIED "FORT," AT EARLSTOUN, IN SCOTLAND.—The peaked summit of the Black-hill, Earlstoun, has been found to be surrounded by traces of *three concentric circles* of vitrified masonry, except where the two interior and higher circles are broken by the abruptness of the northern side of the hill. The vitrifaction is said to be perfectly similar to that of Craigphadric and some others, in the highlands of Scotland. The *Border Advertiser* quotes from the *Review* a theory as to the purpose of such vitrified forts, to the effect that they were probably the mountain altars of the ancient fire-worshippers,—the "high places of Baal," in short; and, that such altars must have existed in Scotland at one time the frequency of the prefix Baal, now Bal, to the names of places, such as Balbougie, Balbirnie, Balmoral, &c., seems to show. In Persia the ancient fire-worshippers had threefold fire temples, one of which was depicted with flames issuing from its central region. The writer in the *Review* says, on the subject;—"Was Baal, *the Lord of Heaven*, ever adored by the original inhabitants of Scotland? Every one who knows anything of the antiquities of our country knows that this *was* the case, and that there are many remnants of tradition bearing upon the point. We shall only adduce the word *beltane*, which, in Gaelic, is Baaltinn; that is, Baal's fire, or Baal the Lord of Fire. In modern days *beltane* is fixed to the 1st of May; but it may admit of a doubt whether this great annual adoration of *the Lord of the Summer* was on his passing the equinoctial, or at his solstice." It is a mistaken idea, however, that the outward sun was "the lord of the summer" here indicated. There can be no doubt that, at one time at least, the true sun so worshipped was known and held to be the Divine Sun, internal to man himself, and of whom the outward sun, and the fire, were merely used as emblems. It was thus, too, that the Druidical ground circles and centres (used, probably, in invocations of the God) were representative not of the macrocosm or the planetary system, but of the microcosm or little world of man's own nature, as the true *temple* of the *Deity*. The masonry of the Blackhill and other "forts," as they are called, is said to be vitrified only on and near the surface.

TENDERS.

For a dwelling-house at Leicester. Quantities supplied. Mr. Francis Drake, architect:—

Beaver	£832	0	0
Porter	769	0	0
Neale	753	0	0
Clifton	743	0	0
Cox	743	0	0
Chambers	729	0	0
Glover	721	0	0
Middleton	627	0	0

For erecting a villa residence at Cockington, South Devon, for Mr. W. Froude (exclusive of foundations to be measured). Quantities not supplied. Mr. Edward Appleton, architect:—

Harvey	£4,946	0	0
Dyer & Bragge (accepted)	4,928	0	0

For excavators', bricklayers', masons', slaters', plumbers', and smiths' work to three pairs of semi-detached residences in St. James's-road, Tonbridge Wells. Mr. James Blundell, architect:—

Strange & Sons	£4,467	14	0
Edwards & Walkling	4,328	0	0
Pink (accepted)	3,997	0	0
For plasterers' work.			
Mason	£859	10	0
Twort	857	0	0
Wenban (accepted)	845	0	0

Accepted for a pair of semi-detached residences, at Wakefield, for Messrs. Baker & Mander. Mr. Watson, architect:—

Kershaw (excavating, brick, stone, and slating)	£851	0	0
Mountain (carpenter and joiner)	505	10	0
Driver (plasterer)	58	0	0
Craven (plumber and glazier)	71	10	0
Hudson (smith and bellhanger)	62	10	0
Moxon (painter)	20	0	0

For rebuilding 26, Maddox-street, Regent-street. Mr. George Truefitt, architect:—

Stimpson	£1,399	0	0
Patrick	1,238	0	0
Henshaw	1,234	0	0
Simmonds	1,030	0	0

For the erection of a Free Methodist chapel, Brigg, Lincolnshire. Mr. Watkins, architect:—

Whatmough	£1,100	0	0
Dent	1,066	0	0
Andrews	1,055	14	6
Clarke (accepted)*	1,012	0	0

* Exclusive of heating apparatus, &c.

For the first portion of restorations, Manuden parish church, Essex. Mr. Lansdown, architect:—

Bint	£1,725	0	0
Thoday & Clayton	1,523	0	0
Bullock & Son	1,475	0	0
Gibbons	1,414	0	0
Dickinson	1,343	15	0
Glasscock	1,245	0	0
Brown (accepted)	1,170	0	0

For four cottages for Mr. Buckland, Chippenham, Wilts. Mr. Lansdown, architect:—

Harris	£730	15	6
Beszant	747	0	0
Light	686	0	0
Cuzna	688	0	0
Brown (accepted)	578	0	0

For new farm-house for Mr. Hawkins, Oaksey, exclusive of old materials re-used. Mr. Lansdown, architect:—

Barrett	£883	19	0
Phillips	848	0	0
Wall & Hook	795	0	0
Liddiah (accepted)	790	0	0

For building London Dock Steam Wharf, Wapping Wall, exclusive of iron-work. Mr. J. Whichcord, architect:—

Gammon	£11,948	0	0
Macey	11,481	0	0
Henshaw	11,380	0	0
Higgs	11,120	0	0
Hack & Sons	10,997	0	0
Myers & Sons	10,887	0	0
Lawrance & Son	10,832	0	0
Brown & Robinson	10,600	0	0
I'Anson	10,440	0	0
Axford	10,200	0	0
Piper & Wheeler	9,987	0	0

For erecting factory for Messrs. Clarke & Co. Messrs. Hill & Paraire, architects. Deducting for old materials:—

Tracey	£9,794	0	0
Fish	9,500	0	0
Macey	9,460	0	0
Patrick	8,260	0	0
Holland	8,093	0	0
Henshaw	7,588	0	0
Howard	7,547	0	0
Matthews	7,465	0	0

For erecting a villa residence, with stables, at the Roslyn Park Estate, Hampstead, for Mr. J. J. Orgill. Mr. H. Field, architect. Quantities supplied by Messrs. Williams & Schofield:—

Turner	£4,645	0	0
Adamson & Son	4,379	0	0
Conder	4,111	0	0
Scrivener & White	3,999	0	0
Yarbury	3,948	0	0
Watts (accepted)	3,797	0	0

For villa residence and stables in the Lawn-road, Hampstead, for Mr. E. M. Hill. Messrs. G. & T. Cremer, architects. Quantities supplied by Mr. M. Taylor:—

Hibberd	£2,290	0	0
White	2,189	11	0
Fincher & Martyn	1,775	0	0

For alterations to The Globe, Goldsmith-row, Hackney-road, for Mr. Herbert. Mr. E. Brown, architect :—

Stanton	£845	0	0
Simmonds	630	0	0

For the City-road Chapel. Mr. Pocock, architect :—

Clements	£3,823	0	0
Richardson	3,717	0	0
Ashby & Son	3,514	0	0
Piper & Wheeler	3,400	0	0
Lawrence	3,300	0	0
Pritchard	3,211	0	0
Thomson	2,923	0	0

For 16, Basinghall-street. Mr. Woodthorpe, architect :—

Prince	£1,475	0	0
Brass	1,426	0	0
Turner	1,413	0	0
Axford	1,400	0	0
Jeffrey	1,398	0	0
Pritchard	1,364	0	0

For the erection of three warehouses in Dorset-street, White's-row, and Commercial-street. Mr. N. S. Joseph, architect :—

Lawrence & Sons	£4,220	0	0
Newmann & Mann	4,060	0	0
Ashby & Horner	4,043	0	0
Piper & Wheeler	3,960	0	0
Mansfield & Sons	3,840	0	0
Axford	3,760	0	0
King & Sons	3,750	0	0
Browne & Robinson (too late)	3,748	0	0
Hill & Keddall	3,723	0	0
Conder (accepted)	3,698	0	0

For Morant's Court farmstead. Mr. W. Shearburn, architect. Quantities supplied by Mr. Nelson Jones :—

Grover	£1,900	0	0
Sawyer	1,798	5	0
Rose	1,715	13	0
Hoadley	1,369	0	0
Wesley	1,350	0	0
Pattinson	1,297	0	0
Potter	1,226	0	0
Anscomb	1,208	0	0
Luxford	1,202	0	0
Rutter	1,190	0	0
Jennings	1,190	0	0
Smith	1,146	0	0
Bonnett (accepted)	1,115	0	0

For alterations and shop front at 307, Kentish-town road. Mr. H. Hodge, architect :—

Bradley & Egg	£385	0	0
Kent	385	0	0
Allen (accepted)	273	0	0

For conservatory, at 12, Clarendon-road, Notting-hill, for Mr. Thompson. Mr. G. Trueffitt, architect :—

Allen (accepted)	£154	0	0

For the erection of eight cottages, at Hallsville, Essex. for Mr. Joseph Harris, jun., architect :—

Wood	£1,350	0	0
Howlett	1,160	0	0
Heritage	995	0	0
Cosh (accepted)	960	0	0

For building a pair of semi-detached residences, Brompton-road, Bexley Heath, for Mr. Henry Chandler. Messrs. W. Gosling & Son, architects. Quantities supplied :—

Tongue	£1,635	0	0
Sutton	1,450	0	0
Harding	1,435	0	0
Ledbetter	1,428	0	0
Wamman	1,329	0	0
Peskett	1,297	0	0
Somers	1,275	0	0
Gray	1,223	0	0
Thompson	1,160	0	0

For gun manufactory, Lancaster-street, Birmingham, for Messrs. Scott & Son. Mr. Edward Holmes, architect. Quantities supplied by Mr. Mansell :—

Matthews	£1,785	0	0
Partridge	1,780	0	0
Briggs & Son	1,705	0	0
Whitnall	1,670	0	0
Hardwick	1,644	0	0
Jeffrey & Pritchett	1,641	0	0
Jones	1,623	0	0
Horsley, Brothers	1,547	0	0

For lodge and gates to Tudor Hill Estate, Sutton Coldfield, near Birmingham, for Messrs. Bach & Barker. Mr. Edward Holmes, architect. Quantities supplied by Mr. Mansell :—

Hardwick	£411	10	0
Hill	378	0	0
Matthews	377	0	0
Jones (accepted)	335	0	0

For the erection of two houses at Belgrave, near Leicester, for Messrs. Burton. Mr. William Millican, architect :—

Wykes	£1,119	0	0
Hutchinson	1,020	0	0
Duxbury	1,006	0	0
Porter	998	0	0
Osborne	997	0	0
Plant & Thurlby	940	0	0
Armstrong*	925	0	0

* Second tender reduced, £883 11s. (accepted).

For the erection of new offices, Horsefair-street, Leicester, for Mr. Thomas Farmer Cooke. Mr. William Millican, architect :—

Clifton	£704	10	0
Wykes	644	0	0
Plant & Thurlby	623	0	0
Osborne	585	0	0

BUILDER'S PRICE BOOK, LATEST AND BEST.
In 12mo. strongly bound in cloth, price 4s. (postage 4d.),

THE BUILDER'S and CONTRACTOR'S PRICE BOOK (Lockwood's formerly Weale's) for 1864, revised by G. R. BURNELL, Esq. C.E. This book is the universally recognised arbitrator in the settlement of disputed accounts. Not being printed from stereotype plates year after year, as is the case with other books of the kind, errors are not perpetuated, and the opportunity is taken in every reprint to introduce current prices and other desirable improvements.

LOCKWOOD & CO. 7, Stationers'-hall-court, E.C.

Just published, on a Sheet, price 1s.

DELANY & OKE'S WAGE TABLE for ENGINEERS, SHIP BUILDERS, CONTRACTORS, BUILDERS, &c. from a quarter of an hour, in regular progression, to nine hours and three quarters, and from one day to ten days, at 1s. to 8s. per day.

London: E. & F. N. SPON, 16, Bucklersbury.

Ready in a few days, price 6s. (postage 4d.)

THE ENGINEER'S, ARCHITECT'S, and CONTRACTOR'S POCKET-BOOK (Lockwood & Co.'s, formerly Weale's) for the Year 1864.

"Another edition of this old acquaintance has just been issued, and fully merits the estimation in which it has been held for many years. There is much new matter introduced, and the work has been carefully corrected up to the day of publication. It is one of the most valuable books of its class. We strongly recommend it."—*Civil Engineer and Architect's Journal*

"There is no work published by or without authority, for the use of scientific branches of the service, which contains anything like the amount of admirably arranged, reliable, and useful information. It is really a most solid, substantial, and excellent work; and not a page can be opened by a man of ordinary intelligence which will not satisfy him that this praise is amply deserved."—*Army and Navy Gazette.*

London: LOCKWOOD & CO. 7, Stationers'-hall-court, E.C.

THE METRIC SYSTEM.

This day is published, demy 8vo. 10s. 6d. cloth (post free),

NORWOOD.—Valuable Freehold Building Land, Land-tax redeemed.

MR. MARSH has received instructions to SELL by AUCTION, at GARRAWAY'S COFFEE-HOUSE, Change-alley, Cornhill, on THURSDAY, AUGUST 4, at TWELVE o'clock, in one lot, valuable FREEHOLD BUILDING LAND, comprising about 8 acres, situate in the White Horse-road and Decimus Burton-road, Norwood, within fifteen minutes' walk of the Norwood Junction Station, and three minutes' walk of the Thornton Heath Station, on the Balham and Croydon branch of the Brighton Railway, and suitable for the erection of first and second class villa residences. May be viewed, and particulars, with plans, had of G. W. ABBOTT, Esq., Solicitor, 61, King William-street, City; at Garraway's; and at Mr. MARSH'S Offices, 2, Charlotte-row, Mansion-house.

SURREY.—The first portion of the Worcester Park Estate, situate between Kingston and Ewell, twelve miles from London, and within one mile and a half of five railway stations, one of which (the Worcester Park Station) is on the estate, and in fifty minutes' journey by rail from town, divided into Forty-seven Lots of from one to two acres each, and Four from four to fifteen acres; a Government registered title, the conveyance of which to each lot will be delivered to the purchaser free of all expense.

MR. MARSH is instructed by the Landed Estates Company (Limited) to SELL by AUCTION, at GARRAWAY'S, on FRIDAY, AUGUST 5, at TWELVE, in Forty-one Lots, the First Portion of the valuable Freehold BUILDING ESTATE, known as Worcester Park, anciently a royal manor, then distinguished as Little Nonsuch Park. This fine estate is beautifully studded with ornamental timber, and presents many choice spots for the erection of detached villas, for which purpose it has been purchased by the Landed Estates Company (Limited) and divided into plots of convenient extent. The subsoil is gravel and sand and a high service water-supply is laid on by the Lambeth Waterworks Company direct from their reservoirs at Kingston. The Ewell, Kingston, and Epsom and King ton to Epsom, forms one boundary of the property, which possesses a frontage of upwards of several thousand feet. The lots in Ewell parish are all tithe free.—Particulars, with plans attached, are in course of preparation, and may shortly be obtained of Messrs. HOOK, the Surveyors of the Company, 13a, Great George-street, Westminster; Messrs. THORNDYKE & SMITH, the Solicitors of the Company, 11, Staple-inn; or at Mr. MARSH'S Offices, 2, Charlotte-row, Mansion-house.

KENSINGTON.—Desirable Freehold Residence, with about 2¼ acres of land, prettily timbered, and available for building purposes, within five minutes' walk of the Kensington Railway Station.

MR. MARSH has received instructions to SELL by AUCTION, at GARRAWAY'S, on THURSDAY, AUGUST 11, at TWELVE, the detached FREEHOLD RESIDENCE, distinguished as Weston Lodge, Portland-road, Kensington, with large coach and kitchen gardens, beautifully timbered, containing about 2¼ acres, offering great advantages for building purposes, and well worthy the immediate attention of capitalists, builders, and others. May be viewed on application, and particulars, with conditions of sale, with plans attached, may shortly be obtained of TUFNELL SOUTHGATE, Esq. Solicitor, 7, King's-bench-walk, Temple, W.C.; at Garraway's; and at Mr. MARSH'S Offices, Charlotte-row, Mansion House.

FREEHOLD BUILDING PLOT, HACKNEY, suitable for two good Shops, with 35 feet frontage to Mare-street, Hackney adjoining the Mansion Houses, with Stabling thereon, value 50*l.* per annum.

MESSRS. TEBB, BROTHERS, will SELL the above, at GARRAWAY'S, Cornhill, on FRIDAY, AUGUST 5, at ONE o'clock.—Particulars of W. RUTTER, Esq. 10, Basinghall-street, E.C.; at Garraway's; and of the Auctioneers, 3, Adelaide-place, London Bridge, E.C.

LEYTONSTONE.—Second Portion of Estate, comprising Forty Plots of Freehold Building Land.

MR. JOHN M. DEAN will SELL by AUCTION, at the Plough and Harrow Tavern, Leytonstone, on THURSDAY, AUGUST 4, at THREE o'clock, in forty lots, a FREEHOLD ESTATE (consecrated from land-tax), comprising FORTY PLOTS of eligible BUILDING GROUNDS, situate at Harrow Green, on the high road from Stratford to Leyton-stone, within a short distance of the Leyton Railway Station, having extensive frontages on both sides of the Leytonstone high road. The land is level and dry, with a gravelly subsoil, and is particularly eligible for the erection of detached or semi-detached residences. May be viewed, and particulars and conditions of sale, with plans, had of Messrs. LYNES & SON, Solicitors, 8, George-yard, Lombard-street; at the Plough and Harrow Inn, Leytonstone; and of Mr. JOHN M. DEAN, Auctioneer and Surveyor, The Grove, Stratford, E.

To Contractors and Manufacturers requiring good Stabling.

CLERKENWELL, close to New River Head. By direction of the Administratrix of the late Mr. Pitman.

MESSRS. J. J. CLEMMANS & SON will SELL by AUCTION, at GARRAWAY'S, on WEDNESDAY, AUGUST 3, at TWELVE, a capital LEASEHOLD ESTATE, comprising Nos. 10 to 16, Gainsford-mews, close to New River Head, consisting of good stables, with rooms over, now occupied by weekly tenants. Held at a low ground rent for about 45 years, unexpired.—May be viewed. Particulars obtained of Messrs. LOXLEY & MORLEY, Solicitors, 30, Cheapside; and of the Auctioneers, Holywell-row, Finsbury.

TO BE SOLD, pursuant to a Decree of the High Court of Chancery, made in a cause of "John Merryman against Will am Wolfe Bonney and Others," with the approbation of the Vice-Chancellor, Sir R. T. Kindersley, the Judge to whose court this cause is attached, by

MESSRS. PRICE & CLARK, the persons appointed by the said Judge, at GARRAWAY'S COFFEE-HOUSE, Change-alley, Cornhill, in the city of London, on FRIDAY, the 5th day of AUGUST, 1864, at TWELVE for ONE o'clock in the afternoon, in Three Lots, certain FREEHOLD PREMISES, situate in Garrett lane, Wandsworth, Surrey, formerly known as Aithorp Lodge, but now called the Duke of Wellington Inn, having extensive frontage to the high road leading from Wandsworth to Tooting, and opposite St. Mary's Church, with garden, pleasure-grounds, and meadow land, the whole containing about 2½ acres, or thereabouts, and possessing an ancient well; subject to a lease thereof for about forty two years from the 25th of December, 1851, at 140 per annum; also, Freehold Ground-rents, amounting to 56l. 5s. per annum, secured on five dwelling houses (one with shop), being Nos. 8, 9, 10, 11, and 12, Edward-terrace, Garrett-lane aforesaid; and also a Freehold Piece of Land situate in Garrett lane aforesaid, and adjoining the premises before mentioned, having a frontage to the said high road of 152 feet 6 inches and a depth of 656 feet 9 inches, adapted for building purposes.—Particulars whereof, and conditions of sale may be had, gratis, of Mr. T. H. MERRIMAN, Solicitor, 1, Mitre court, Temple London; Mr. WM. VENN, Solicitor, 3, New Inn, Strand; Mr. HENRY PARRIS, Solicitor, 34a, Mompte street; Mr DAVID ASTON, Solicitor, of 108, Edgware-road, W.; Mr. R. GIBBS, Solicitor, 18, Poultry; and of the Auctioneers, 38, Chancery-lane, W.C.
J. A. BUCKLEY, Chief Clerk.

SOMERS TOWN,—Final Portion of the Timber Merchant's Stock, to clear the Premises

MESSRS. LEREW & LEREW will SELL by AUCTION at No. 59, Osnaburgh-street, Euston-road, on MONDAY, JULY 25th, at TWELVE, the remaining STOCK, viz 5,000 feet mahogany, walnut, cedar, ash, birch and beech, wide pine board, 7,000 feet veneers, 80 squares flooring, 5,000 feet quartering, a few dry planks and battens, 6g ocave piano forte, truck, racks, &c.—Auction Offices, 2, Cardington-street, Hampstead-road.

WANDSWORTH.—Valuable Freehold Building Land, in the South-fields, containing about Eight Acres.

MESSRS. NORTON, HOGGART, & TRIST have received instructions from the Executors of the late Thomas Langton, Esq. to offer for SALE, at the QUILTHALL COFFEE-HOUSE, near Guildhall, in the City of London, on FRIDAY, 31st AUGUST, at ONE o'clock precisely, in five lots, valuable FREEHOLD BUILDING LAND, site in South fields, Wandsworth, and on the high Wandsworth and Merton road. Lot 1. A Plot of Building Land, having a frontage to the Wandsworth and Merton road of 175 feet, by a depth of 350 feet, and containing 2a. 0r. 34p. Lot 2. A Plot of Building Land, adjoining Lot 1, having a frontage of 143 feet to the Wandsworth and Merton road, by a depth of 333 feet, and containing 1a. 3r. 11p. Lot 3. A plot of Building Land, situate near to Lots 1 and 2, having a frontage of 176 feet to the Wandsworth and Merton road, by a depth of 324 feet, and containing 1a. 3r. 34p. Lots 4 and 5 Two plots of Land, inclosed, situate in Milking place Shot, near to Dunsford's cross, and containing together 1a. 3r. 39p.—May be viewed, and particulars had at the Swan, Wandsworth; of Messrs. RIXON & SON, Solicitors, 33, Cannon street; at the Guildhall Coffee-house; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street, Royal Exchange

CHARING CROSS RAILWAY, CITY TERMINUS.—To Builders, Contractors, Paviors, and Others.

MESSRS. WILLIS & HARROW are favoured with instructions from the Contractor to SELL by AUCTION, on the PREMISES, on TUESDAY, JULY 26th, 1864, at TWELVE PRECISELY, the valuable and useful MATERIALS of the Plumbers' Hall, together with DWELLING HOUSES in Monkwell-lane, Scott's yard, and Tower-hill-lane, comprising 300,000 sound stock bricks, slates, and tiles, sound timbers, joists, and flooring boards, the lead pipes, gutters, and ridges, sashes and frames, doors and frames, and a variety of useful fixtures and fittings up.—May be viewed the day prior and morning of sale, and catalogues had on the Premises; at the Contractor's Office, Worcester-street, Southwark; and of Messrs WILLIS & HARROW, Auctioneers and Surveyors, 3, Newman's-court, Cornhill, E.C. and West Molesey, Kingston, Surrey

ASH, SURREY.—WINDMILL HILL.—Eligible Investments.

MESSRS. WILLIS & HARROW are favoured with instructions from Mr John Price to SELL by AUCTION, at the KING'S HEAD HOTEL, Ash, on TUESDAY, AUGUST 9, 1864, at FOUR for FIVE o'clock, in Eleven Lots, la 1r 26p. of important BUILDING LAND, together with a Cottage and Garden, delightfully situate on an extensive elevation, a walk from the Ash Station on the South-Eastern Railway, and within an easy distance of the town of Aldershott. The soil is dry, the situation extremely healthy, and there is an abundant supply of excellent water. The sites are such as may rarely be obtained in the locality, where the demand for them of all classes is incessant. The property is copyhold, of the Manor of Ash.—Particulars and conditions of sale, with plans, may be obtained at the Place of Sale; of E. C. BARTON, Esq. Solicitor, 4, Wardgate-place, Westminster-road, Lambeth; and of Messrs. WILLIS & HARROW, Auctioneers and Surveyors, 3, Newman's-court, Cornhill, E.C. and West Molesey, Kingston, Surrey.

CHARING-CROSS RAILWAY, CITY TERMINUS.—To BUILDERS CONTRACTORS, PAVIORS, and OTHERS.

MESSRS. WILLIS & HARROW have been favoured with instructions from the Contractor to SELL by AUCTION, on the PREMISES, on WEDNESDAY, AUGUST 10th, 1864, at TWELVE for ONE o'clock precisely, the very superior MATERIALS of the substantially-erected range of Offices known as "Dwgate-hill Chambers," comprising 3½ tons of lead and pipes, gutters and ridges, excellent flooring boards and timbers, plate glass sashes and frames, sliding, panelled, and glazed doors, Portland stone landings and steps, mahogany hand rails with iron supports, ornamental Portland stone cornices and stringing, stoves, gasfittings, iron girders, and a variety of useful fixtures and fittings up.—May be viewed the day prior and morning of Sale and Catalogues had on the Premises; at the Contractor's Office, Worcester-street, Southwark; and of Messrs. WILLIS & HARROW, Auctioneers and Surveyors, 3, Newman's-court, Cornhill, E.C. and West Molesey, Kingston, Surrey

PURLEY, in the Parishes of Croydon and Coulsdon, contiguous to the Caterham Junction Station, on the main line of the Brighton and South Eastern Railways, about a mile and a half from the South Croydon Terminus, and twelve miles from London, which is reached in half an hour by rail.

MESSRS. BLAKE will SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change-alley, on WEDNESDAY, AUGUST 3rd, at TWELVE, the First Portion of the Purley Lodge Estate, consisting of about Twenty acres of FREEHOLD LAND, divided into suitable lots for building purposes, the northern portion varying from one to two acres, and the southern from six-tenths to a full acre. A very eligible site, adjoining the railway-station, is here set apart for the erection of a Tavern. The land is ornamented with timber, and has a substratum of gravel and chalk. The situation is beautifully rural and healthy and (with the ready access to the metropolis) presents to the builder, capitalist, and private gentleman first-class sites for the erection of country residences of the first class, with plans, may be had at Garraway's Coffee-house; of Messrs WEST & KING, Solicitors, 3, Charlotte-row, Mansion-house; and of Messrs. BLAKE, Croydon.

SUTTON, SURREY, in the immediate vicinity of the Sutton Station of the London and Epsom Railway.

MESSRS. BLAKE will SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change alley, Cornhill, on FRIDAY, AUGUST 12th, at TWELVE o'clock, THIRTY Eight valuable FREEHOLD BUILDING PLOTS, comprising the principal part on the Sutton Park Estate, having capital frontages to the Cheam road, and to new roads, known as Grove and Church roads. The land, which comprises an area of about seven acres, is elevated, and commands fine views. It has a sub-stratum of chalk, and is admirably adapted for the erection of first-class residences. There is an early prospect of additional railway accommodation with the Metropolis, by which means the importance of the neighbourhood will be much enhanced.—Particulars, with plans, may be had fourteen days before the sale, at Garraway's Coffee-house; at the Inns at Sutton, Epsom, Carshalton, and Reigate; of JOHN BERNEY, Esq. Surveyor, Croydon; of H. RICHARDS, Esq. Solicitor, Croydon; and of Messrs. BLAKE, Croydon.

MESSRS. LAKE & HOPKINSON, ARCHITECTS and CONSULTING SURVEYORS.

NOTICE.—LOST.—Should this Meet the Eye of WILLIAM or GEORGE BODLEY, whose two brothers, Robert and Joseph, left England in the year 1848, and sailed for the Cape of Good Hope, they will hear of them by writing to R. BODLEY, Builder, King William's Town, British Kaffraria.
March 11, 1864.

A CARPENTER and BUILDER is desirous of meeting with a PARTNER.—An active and practical Man. Strict references given and required.—Address, X. R. Office of "The Builder."

PARTNERSHIP WANTED, with an established CONTRACTOR or BUILDER.—Address, with particulars and amount of premium required, to ARCHITECT, No. 20, Brompton-crescent.

BOROUGH of LIVERPOOL.—To ARCHITECTS and SURVEYORS.—The Town Council of the Borough of Liverpool desire to engage the services of a competent person to act as SURVEYOR of their Estates, and as ARCHITECT in the erection of any buildings required by them. An outline of the principal duties required will be forwarded on written application, addressed to the Town Clerk, Town Hall, Liverpool. The gentleman appointed must be experienced in his profession, and not more than forty years of age, and he will be required to abstain from all private practice, and to devote his whole time and attention to the business of the Corporation. The salary will be 800l. per annum; and suitable offices, with a competent staff of clerks, and all stationery, &c. will be provided by the Town Council. Applications, with testimonials, sealed, and marked "Application for Office of Surveyor," and addressed to "The Chairman of the Real Estate Sub-committee, Town Hall, Liverpool," will be received at the Office of the Town Clerk of Liverpool, up to ONE o'clock on THURSDAY, the 11th day of AUGUST next, but no later. Each applicant must give full particulars of the present and previous employment of the applicant, and state how sworn, if appointed, he could enter upon the duties of the office. No recommendation of any applicant will be taken into consideration unless it be stated therein that the writer is personally acquainted with the individual recommended, and that such writer can, of his own knowledge, answer for the qualifications of the applicant. If the applicant, or any person recommending him, is not resident in Liverpool, a reference to a person of respectability and standing in Liverpool, who is acquainted with the applicant or person so recommending, as the case may be, will be required. It is requested that no personal application be made to any member of the Council in reference to this appointment. The gentleman appointed will have the benefit of conferring and advising, and will be expected to co-operate with the present Surveyor to the Corporation, who will continue his services as Consulting Surveyor.—By order,
JOHN SHUTTLEWORTH, Town Clerk.
Town Hall, Liverpool, July 13, 1864.

BRICKLAYERS WANTED, at the New Gas, Strangeways, Manchester. Wages, 33s. Two years' work. Either society or non-society men.

AN experienced PLUMBER is in WANT of a SITUATION, or a JOB, piece or day work. First-class references.—Address, PLUMBER, 63, Marylebone-lane, W.

BUILDING LAND TO BE LET, situate at Vauxhall, Leytonstone, and Camberwell.—For particulars apply to Messrs. DRIVER & CO. 4, Whitehall, London, S.W.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms; stabling for eight horses and coach-houses for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 28 acres; gravelly soil, near Sunninghale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell-square.

LORDSHIP ROAD, Stoke Newington.—TO BE LET, on Building Leases of 99 years (at low ground rents), several PLOTS eligible for semi-detached villas and terraces.—Apply to Mr. RUDDA Brunerie-road, Church-street, Stoke Newington. N.B. Bricks supplied on the estate at low prices.

LARGE HOUSES are REQUIRED at WANSTEAD.—The Grove Estate is five minutes' walk from the station. Money and materials advanced.—THOMAS EDWARD KNIGHTLEY, Architect, 2, Cannon-street, City.—The Freehold may be purchased.

NEWLY and most substantially erected WAREHOUSES and LAND, occupying an area of nearly half an acre, near the entrance to the London Docks, well adapted for bonded warehouses. TO BE LET on LEASE, or the Freehold to be sold.—Apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

FREEHOLD LAND TO BE LET, on Building Leases, at low ground rents, on the estate of the Carpenters' Company, at Stafford, Essex, close to the Station and the High-street; one portion with river frontage, for the erection of manufactories, and another for small houses or cottages.—For plans and particulars, apply at the Clerk's Office, Carpenters' Hall, London wall.

PORTLAND CEMENT WORKS.—TO BE LET, for a term of years, drawn by steam and wind power, in complete repair, and in full work, and calculated to carry on a trade to any extent, being in the neighbourhood of an abundant supply of the best materials, with water-carriage throughout Norfolk and Suffolk, and through Yarmouth, to all parts of the world. The Barney Arms Station is within five minutes' walk.—Apply to Mr. JAMES NESBIT, Morton, Norwich.

BUILDING GROUND TO BE LET, from Michaelmas next, a valuable PLOT of GROUND, adjoining the Lea Bridge Railway Station, with a frontage of 300 feet to the Lea Bridge-road, the total area being five acres and a half.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

WATERSIDE PREMISES, City-road.—Messrs. FULLER & HORSEY are instructed to LET, on LEASE, from Michaelmas next, extensive WATERSIDE PREMISES, occupying a site of 21,000 superficial feet, situate on the Wenlock Basin, City-road, and comprising a spacious and substantial modern brick-built manufactory of two floors, engine and boiler houses, with 50 horse power steam-engine and three Cornish boilers, range of brick-built offices, and paved yards with gateway entrances. There is a water frontage of about 207 feet.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

PUTNEY.—To BUILDERS and OTHERS. Superior BUILDING LAND TO BE LET, on the Richmond-road, Putney, within 150 yards of the railway station. Leases, 99 years. Ground-rent moderate. Liberal allowance made.—For plans, &c. apply to J. H. ROWLEY, Esq. Architect, 33, Poultry, E.C.

FOREST HILL.—BUILDING LAND TO LET on this hill, commanding extensive views.—Apply to A. B. 193 Bermondsey-street, S.E.

NOTICE.—TWICKENHAM PARK, near RICHMOND.—Most Eligible BUILDING LAND to LET on LEASE, for Ninety-nine Years, in Large or Small Plots. Money advanced if required.—For particulars, apply to W. BACKHURST, at the Estate Offices, Twickenham Park; or EDWARD GUILLAUME, Esq. 14, George street, Mansion House, London.

TO BUILDERS and OTHERS.—LAND TO BE LET on BUILDING LEASES.—Upwards of 3,000 feet frontage, beautifully situate at Penge, within a short distance of three railway stations.—Apply to Mr. LEWIS, Architect, 6, John-street, Adelphi; Mr. RICHARDS, Solicitor, Croydon; or to Mr. GARROOD, Hawthorn grove, Penge. Money advanced if required.

SANDOWN BAY, ISLE of WIGHT.—BUILDING LAND on long Lease, facing the magnificent bay, and near the proposed pier. The most eligible sites now to be had in this rapidly-rising town.—Apply to Mr. J. WITHERS, Timber Merchant, Sandown

TO ARCHITECTS, BUILDERS, &c.—BERKSWELL BRICKYARD, adjoining the station on the London and North-Western Railway between Birmingham and Coventry. The proprietor of the Property is desirous of DISPOSING of the FREEHOLD. There is a capital mine of Clay, averaging 12 feet deep, with a deep bed of excellent Building Stone underneath, being a continuation of the Kenilworth strata. Two Labourers' Cottages are included.—Apply by letter, to Mr. WARD, 94, Bull-street, Birmingham.

THORNTON HEATH, CROYDON.—TO BE LET, for Building, a very desirable PLOT of FREEHOLD LAND, 360 feet in depth, by 45 feet frontage to the London Road, situated less than a mile from the healthy town of Croydon and the West Croydon Station, at a moderate ground-rent. For particulars apply at Gloucester Cottage, Thornton Heath (a joining the land), or at Mr. HAYES, 18, Austin Friars.

ARCHITECTURAL ENRICHMENTS, in Plaster, Cement, Papier mâché, Composition, &c. Centre Flowers, Soffits, Trusses, and all kinds of Enrichments for Ceilings, Cornices, &c. new in design and moderate in price.—G. JACKSON & GEORGE, MODELLERS & SCAGLIOLA MANUFACTURERS, BAKER'S-BUILDINGS, LIVERPOOL-STREET, BISHOPSGATE, E.C.

PLASTER ENRICHMENTS, CENTRE FLOWERS, SHOP FRONT TRUSSES, VASES, ROYAL ARMS, CAPITALS, And every description of ornament for internal and external decorations, executed in Plaster, Carton Pierre, Composition, and every kind of Cement, at reduced prices.

MESSRS. HERBERT, MODELLERS, 242, EUSTON ROAD, ST PANCRAS. Best Gelatine, prepared, and ready for moulding 2s. per lb. Best Fine White Plaster, 2s. per cwt. Coarse ditto, 1s 9d. per cwt.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from one to 500 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union Joints, Flasks, Bottles, Bowls, Inkstands, Tea-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

THE GUTTA-PERCHA COMPANY, PATENTEES, WHARF ROAD, CITY ROAD, LONDON.

BEFORE you build any more garden-walls, see the new PATENT CORRUGATED BRICK, invented and manufactured by J. FOXLEY, acknowledged to be the best thing for the purpose by all gardeners who have seen it. No coating required; no fixtures of iron, copper, &c.; perfect training obtained, and the trees can be kept clean and free from insects. Licenses granted to make the bricks in certain localities; and further information can be obtained on application to J. FOXLEY, Stony Stratford, Bucks.

TO INVENTORS.—All intending Patentees. should procure the PRINTED INFORMATION regarding PATENTS—their cost, and mode of procedure to be adopted—issued gratis by the General Patent Company (Limited), 71, Fleet-street, London. ROBERT M. LATHAM, Secretary.

DESACHY'S FIBROUS PLASTER.

GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of diaper, &c; for the lintings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.
DESIGNS MADE FOR ANY WORKS.

POLONCEAU and SEYSSEL ASPHALTE.

ESTABLISHED 1838

For covering Flat Roofs, Paving and Flooring of every description, especially in places subject to damp and vermin. This Asphalte is now extensively used for paving Stables (as shown above), the absence of joints preventing the generation of ammonia. For Estimates and Prices, &c. &c. apply to JOHN PILKINGTON, 15, Fish street-hill, London, E.C.

Country Builders supplied with Asphalte in Bulk for covering Footings, Barn Floors, &c. with instructions to lay it down.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the
MUTUAL LOAN FUND ASSOCIATION
(Incorporated by Act of Parliament, 1859), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100l. to 1,500l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

IMPROVED REVOLVING SHUTTERS.

MARTIN & CO.

Respectfully invite the attention of Architects, Builders, and the Public to their superior IRON or WOOD REVOLVING SHUTTERS, with all requisite gearing complete.

Wood Revolving Shutters from 2s. per foot super. Iron from 2s. 6d., with all requisite gearing complete, suitable for Banking Houses, Shop Fronts, Public Buildings, and Private Houses.

Brass Sash Bars and Brass Stall Plates at considerably reduced prices for best quality only.

ILLUSTRATED PROSPECTUS ON APPLICATION TO MARTIN & CO., 200, HIGH HOLBORN, W.C.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

No. 35. WARNER'S PATENT

CAST-IRON LIFT PUMPS,

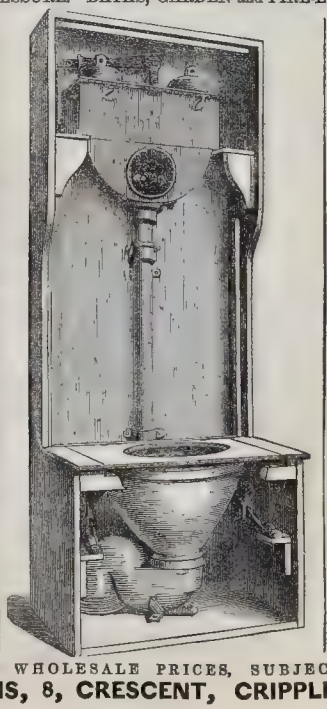
For Raising Water from Wells not exceeding 25 feet in depth,

From 19s.

Every Description of HYDRAULIC MACHINERY in Stock.

No. 69.

WARNER'S PATENT BRASS VIBRATING STANDARD LIFT and FORCE PUMP, for the supply of Cisterns, &c. Is recommended for the simplicity of its construction, and the ease with which it works.



By the introduction of the Vibrating Standard, the cumbrous carriage and expensive rings and guides are unnecessary, rendering the pump cons derably less than Pumps made on the old plan.

2½ inch	£4 4 0	Larger sizes when required.
3 „	5 5 0	
3½ „	6 6 0	

Fitted to the best plank, 5 ft. 9 in. high.

Where strength is not an object, a lighter Pump can be supplied.

2½ inch	£3 10 0
3 „	4 0 0

IMPORTANT TO WATER COMPANIES.

No. 206, B. C. WARNER'S Improved SELF-ACTING APPARATUS for SUPPLYING WATER-CLOSETS ensures a perfect and thorough Flushing of the Closet Basin, WITHOUT THE POSSIBILITY, EITHER BY ACCIDENT OR DESIGN, OF A WASTE OF WATER, and is applicable for High or Low-pressure Service.

JOHN WARNER & SONS, 8, CRESCENT, CRIPPLEGATE, LONDON, E.C.

SALES BY AUCTION.

GREENWICH HOSPITAL.—Old Stores and Building Materials

PULLEN, HORNE, & EVERSFIELD are instructed by the Commissioners of Greenwich Hospital to SELL by AUCTION, on the SPARE YARD of the Hospital, on THURSDAY, JULY 28th, at ELEVEN for TWELVE, a large quantity of OLD STORES: comprising blue woollen clothing, linen rags, coverlets, blankets, bedsteads, bedding, as above, and other effects belonging to the Steward's Department; also a quantity of Building Materials, old iron, and articles belonging to the Works Department. May be viewed two days previous, between the hours of Ten and Four; and catalogues had on the Premises; of the Steward and Inspector of Works; and of PULLEN, HORNE, & EVERSFIELD, 46, Parliament-street, Westminster, and 80, Fore-street, City.

PADDINGTON.—To Builders and Others.—Surplus Stock of the Lincolnshire Slate and Slate Company, Limited.

PULLEN, HORNE, & EVERSFIELD are instructed by the Directors of the above company, to SELL by AUCTION, on the PREMISES, No. 4 Wharf, South Wharf-road, Paddington, on MONDAY, AUGUST 1, at TEN for ELEVEN (on account of the number of lots) the extensive and valuable STOCK of ENAMELLED SLATE, consisting of a large assortment of chimney-pieces in imitation of various marbles, and adapted for first-class residences; a very handsome sideboard, fitted with book-shelves and closets, and plate glass back (made expressly for the Exhibition of 1862); inlaid tables of various descriptions, clock-cases, and other articles, the whole of which are executed in the best style. Also a large portion of the Unmanufactured Stock, consisting of 1,000 feet of slate slabs of various thicknesses, several thousand roofing slates of all sizes, cisterns, water pipes, &c., a person's carter-van, a 4-ton truck, cart, and other effects. May be viewed on Saturday previous and morning of sale, and catalogues had at the Place of Sale; and of PULLEN, HORNE, & EVERSFIELD, 46, Parliament-street, Westminster, and 80, Fore-street, City.

HAMPSHIRE. Important Sale of Landed Properties, comprising about 240 acres, nearly all freehold, in and near to the capital market-towns of Lymington and Christchurch and at Freshwater, in the Isle of Wight, the property of the late John Templar, esq., and sold by the direction of his executors.

MESSRS. ABBOTT & SON are favoured with instructions to SELL by AUCTION, at the NAG'S HEAD HOTEL, Lymington, on MONDAY, AUGUST 8, and at NEWLYN'S HOTEL, Christchurch, on TUESDAY, AUGUST 9, very valuable ESTATES, comprising upwards of Fifty Lots of an extremely handed and other property, and forming one of the most important sales in the above district which has taken place for many years; viz:—In the parish of Boldre, Slade Farm, with 130 acres; Mount Pleasant Farm, of 54 acres; Silver Street Farm, of 74 acres; Kettlethorn Farm, of 50 acres; several small farms in the parish of Hordle, varying from 22 acres to 4 acres, with numerous dwelling-houses and other small enclosures at Sway; Sudley's Farm, close to Lymington, with 8 acres; several enclosures of accommodation land contiguous to the town, and dwelling houses and business premises in the town, to which the Auctioneers beg respectfully to direct particular attention; the whole of the above being situate near to Lymington, a town which is increasing in importance, and where extensive docks are being projected, with every prospect of success, and within three hours' ride of London. Also, THREE CLOSES of very valuable BUILDING LAND, situate close to Colwell Bay, in the parish of Freshwater, in the Isle of Wight. The Properties near to Christchurch comprise a Farm of about 30 acres, at Duckbury, in the parish of West Parley, 4 miles from the fashionable watering-place, Bournemouth, and from Wimborne, and 6 from Christchurch; and 25 acres of Land at Godwin's Croft, near to Christchurch, bounded by the estates of Sir G. E. M. T. Gervis, bart. and William Jesson, esq. and L. B. Lenthal, esq.—Printed particulars, with plans attached, may be obtained in due course of Messrs. THOMPSON, PICKERING, & STYAN, Solicitors to the Executors, 4, Stone-buildings, Lincoln's Inn; at the Estate Exchange, Change-alley, Cornhill, London; and of Messrs. ABBOTT & SON, Auctioneers and Estate Agents, Christchurch Hants.

TO TIMBER MERCHANTS, BUILDERS, CABINET-MAKERS, PIANOFORTE-MAKERS, and OTHERS.—Unreserved Sale of the Remaining Stock of a Timber Merchant.

EDMONDS will SELL by AUCTION, on the PREMISES, 212 and 214, Hackney-road, on TUESDAY, JULY 26th, at ELEVEN for TWELVE, the remaining well-selected STOCK: comprising 60,000 feet of Honduras mahogany, 50,000 feet of Spanish, 10,000 feet of Italian walnut in planks and boards; a large quantity of Spanish, Honduras walnut, rosewood, and maple veneers; 1,500 cut pine planks and deals, and quantity of useful stuff. Utensils in trade, viz. saws, 24 screw-stocks, tires, &c.—May be viewed the Saturday and Monday p.r. Catalogues had on the Premises, and at the Auctioneer's Offices, 22, New North-road, N. The lease of the extensive Premises to be disposed of.

PIMLICO.—To Builders, Dealers in Materials, and Others.

MR. GEORGE HAINES will SELL by AUCTION, on the PREMISES on TUESDAY, JULY 26th, at TWELVE o'clock, the capital MATERIALS of Six large Dwelling-Houses and Erections, Nos. 5 to 10, Upper Eaton-street, comprising all the excellent stock brickwork, sound covering, and stout timbers in roofs, glazed sashes, doors, partitions, floors and joists, several shop fronts, lead work and iron rail ags, stone paving, fix ures and the usual fittings.—May be viewed. Catalogues of Messrs. HAINES & SON, Auctioneers, Mornington-street; and at the Auctioneer's Offices, Grosvenor-street West, Eaton-square, and No. 12, High-street, Kensington.

BUILDING LAND, on the Western Borders of Kensington Parish.—To Capitalists, Builders, and Others.

MR. GEORGE HAINES is instructed to LET, by AUCTION, at the VESTRY HALL, Kensington, on WEDNESDAY, AUGUST 3, 1864, at TWO precisely, by direction of the Trustees of the Golden Charity Estate, a valuable PLOT of about 14 acres of most desirable BUILDING LAND, known as the Charcroft Estate, having an important frontage next the high road leading to Uxbridge and Richmond, contiguous to the West London Extension and the Hammersmith and City Railways, and adjoining to the noble mansion and grounds of the Holland Park Estate. Lease will be granted for terms of ninety nine years, and it is purposed to erect 300 houses, offering to a man of enterprise a favourable opportunity to realise a large profit rental.—Full particulars and plans may be obtained of REUBEN GREEN, Esq. and JAMES BROADBRIDGE, Esq. Surveyor, at the Vestry Hall, Kensington; of THOS. H. MERRIMAN, Esq. Solicitor, 1, Mitre-court, Temple; of WALTER REYNOLDS, Esq. Solicitor, Union terrace, Notting hill, of Messrs. HAINES & SON, Auctioneers, Mornington-street; and at the Auctioneer's Offices, Grosvenor-street West, Eaton-square.

OXFORD.—To Speculators and Building Societies. Most valuable Freehold Building Ground, St. Giles's, in the City of Oxford, in proximity to the new Schools, St. John's College, Worcester College, the Clarendon Printing office, Beaumont-street, St. John's-street, and the Railway Stations.

MR. JOHN FISHER begs to announce that he is instructed by the Guardians of the Oxford Incorporation, to offer for SALE by AUCTION, at the TOWN HALL, Oxford, on WEDNESDAY, AUGUST 3rd, 1864, at THREE o'clock in the afternoon, in one lot, all that Valuable BUILDING LAND, comprising the sites of the present Workhouse and Garden, consisting of 0a. 3r. 6p. with very extensive street frontages. The property is free from tithe, and land tax is redeemed. It offers the finest opportunity that has ever occurred in Oxford for dividing into Building Lots, for any Public Institution, or from its great extent, both combined.—Further particulars may be known, on application to Mr. H. JACOB, Clerk to the Board of Guardians, St. Giles's-street; or the Auctioneer, 8, High street, Oxford, where plans may be seen.

BATTERSEA.—50 Plots of Freehold Building Land, adjoining Clapham Junction Railway Station.

GEO. TODD will SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change-alley, Cornhill, on WEDNESDAY, JULY 27th, at ONE for TWO o'clock, the first portion of the CLAPHAM JUNCTION ESTATE, in plots suitable for the erection of villa, cottage, and shop property, including a few eligible sites for the erection of lodgers, and well adapted for the creation of a considerable income in Freehold Ground-rents. The Estate is a very short distance from Clapham and Wandsworth Commons, and the new Park at Battersea; and notices having been given by railway companies, will command it to the speculator.—Particulars, with a plan, may be had of Messrs. H. & F. CHESTER, Solicitors, 1, Church-row, Newington butts; or at the Auctioneer's Offices, Battersea Bridge-road, Battersea Park, S.W.

Freehold Lands, in the parish of Dagenham, in the county of Essex: comprising about 33 acres, with early possession; in lots suitable to small capitalists.

MESSRS. DANIEL SMITH, SON, & OAKLEY have received instructions to SELL by AUCTION, at the GUILDHALL COFFEE HOUSE, Gresham-street, E.C. on THURSDAY, the 4th day of AUGUST, at THREE o'clock precisely, in 4 lots, about THIRTY THREE ACRES of valuable FREEHOLD ARABLE and MARSH LANDS, with farm-house and premises, held on lease for thirteen years, from Michaelmas last, by Mr. Ashby Haws, at the yearly rental of 80l; the tenant paying the land-tax and tithes. Lot 1 will comprise about 21 acres of good arable land, with farmhouse and premises, situate Beacon Tree heath, 1¼ mile from the Chadwell-heath Station, and 2¼ miles from the Romford Station on the Great Eastern Railway; and the remaining lots will consist of five small pieces of arable land, situate in Dagenham marsh, two miles from the Rainham Station of the London, Tilbury, and Southend Railway, and near to the high road between Barking and Rainham.—Further particulars, and an order to view the property may be obtained of Messrs. RANKEN, FORD, LONGBOURNE, & LONGBOURNE, Solicitors, 4, South-square, Gray's-inn; or of Messrs. DANIEL SMITH, SON, & OAKLEY, Land Agents and Surveyors, 10, Waterloo-place, Pall-mall.

Freehold Ground-rent of 100l per annum, well secured on property in the Old Kent-road, opposite the Turk's Head public-house, in the parish of St. Giles, Camberwell, in the county of Surrey.

MESSRS. DANIEL SMITH, SON, & OAKLEY have received instructions to offer for SALE by AUCTION, at the GUILDHALL COFFEE-HOUSE, Gresham-street, E.C. on THURSDAY, the 4th day of AUGUST next, at THREE o'clock precisely, all that THREE ACRES of FREEHOLD LAND, upon which are various houses and premises, producing a rack rental of 130l per annum, comprising fifty-six houses and shops, in Shenton street and Arthur street, with some vacant garden land; the whole is leased for an unexpired term of fifty seven years, at 100l per annum and forms an unexceptionable security, increasing in value year by year.—Particulars, with plan, may be obtained of Messrs. RANKEN, FORD, LONGBOURNE, & LONGBOURNE, Solicitors, 4, South-square, Gray's-inn, W.C; or of Messrs. DANIEL SMITH, SON, & OAKLEY, Land Agents and Surveyors, 10, Waterloo-place, Pall Mall, S.W.

IN CHANCERY.—In the Matter of the Settled Estates Acts, and of the Estate subject to the Trusts of the Will of the late William Cordell, esq. deceased, dated 5th March, 1824, as to one undivided third part, and by order of Sale as to the other two undivided third parts, forming together the entirety.—Valuable Freehold and Leasehold Investments.

MESSRS. DANIEL SMITH, SON, & OAKLEY have received instructions to OFFER for SALE, at the GUILDHALL COFFEE HOUSE, Gresham-street, E.C. on THURSDAY, the 4th day of AUGUST, at THREE o'clock precisely, in seven lots, pursuant (as to one third part) to an Order of the High Court of Chancery, with the approbation of the Judge to whose court the above matter is attached, the following valuable FREEHOLD and LEASEHOLD PROPERTIES, viz.:—Lot 1. Eleven Freehold Dwelling-houses and Premises, situate Nos. 1 to 10 and 10½ inclusive, Rose's Head-yard, Whitechapel, and at the rear of Nos. 17, 19, 21, 23, 25, and 27, Coulston-street, adjoining, the whole occupying an important area, let on lease for a term which will expire 1879, at the rent of 90l. per annum. Lot 2. An Unexpired Lease of Sixty-Three Years, amply secured upon, and arising out of, the same premises situate Nos. 11, 9 and 12, Minories, in the respective occupations of Messrs. Lowe & Cundall and Mr. John Annis, held for a term which will expire 1883, at a ground-rent of 12l 10s. and let at rentals amounting to 150l per annum. Lot 3. The valuable Leasehold Ruin as Premises, situate No. 2, Houndsditch, opposite Aldgate Church, let to Messrs. Levy, on lease, which will expire in 1879, at a rent of 80l, and held under the Corporation of the City of London for a term renewable every 14 years, at a ground-rent of 13l. per annum. Lot 4. Leasehold Dwelling-houses, situate No. 1, 2 to 5 inclusive, 8, 9, and 10, Cambridge-terrace, Hackney-road, held for a term which will expire Midsummer, 1893, subject to a ground rent of 12l 10s. and let for the whole term at rentals amounting together to 44l. 8s. Lot 5. Five Leasehold Dwelling-houses, Nos. 1 to 5 inclusive, Cent.-e-street, Hackney-road, held for a term expiring 1883, at a peppercorn, and let for the whole term at rentals amounting together to 20l. 6s. per annum. Lot 6. A Leasehold Dwelling-house, with two shops, situate No. 27, Exmouth-street, Clerkenwell, held for a term which will expire 1876 at a ground-rent of 4l. per annum, and let for the whole term at a rental of 36l. per annum, leaving a net profit rental of 32l. per annum for nine years. Lot 7. Two Leasehold Dwelling-houses, situate Nos. 16 and 22, Wakefield-street, Regent-square, in the occupation of Mr. Matthias Lilley and Mr. John Edwards, held for a term which will expire 1914, at a ground-rent of 24l. per annum, and let for the whole term at rentals amounting together to 52l. per annum.—May be viewed on application to the respective tenants, and particulars had at the Guildhall Coffee-house, Gresham-street, E.C.; of Messrs. HOLLINGSWORTH, TYERMAN, & GREEN, Solicitors, 24, Great-James-street, E.C.; and of Messrs. DANIEL SMITH, SON, & OAKLEY, Land Agents and Surveyors, 10, Waterloo-place, Pall-mall, S.W.

IN CHANCERY. In the matter of the Settled Estates Act, and of the Estates subject to the Trusts of the Will of the late William Cordell, esq. deceased, dated 5th March, 1824, as to one undivided third part, and by order of Sale as to the other two undivided third parts, forming together the entirety.—Valuable Freehold Estates, land-tax redeemed, situate in the parishes of Bark ng and Dagenham, in the county of Essex.

BY Order of the Secretary of State for India in Council.—NOTICE is hereby given, that TWENTY-FIVE APPOINTMENTS in the Upper Class of the ELECTRIC TELEGRAPH DEPARTMENT in INDIA will, in the year 1865, be open to PUBLIC COMPETITION.

A COMPETITIVE EXAMINATION will, accordingly, be held in this Office in the month of MAY next.—Full printed particulars of the conditions which will be admitted to the examination, and also respecting the nature of the appointments to be competed for, may be obtained at this Office, on application, either personally or by letter addressed to the "Under Secretary of State for India," India Office, London, S.W.

India Office, 1st July, 1864.

BUILDERS' BENEVOLENT INSTITUTION.—An ELECTION of PENSIONERS will take place in NOVEMBER next.—Candidates may obtain forms of application (to be returned on or before 29th AUGUST) at the Offices, 32, Southampton-street, Bloomsbury. Pensions, 24l. per annum for males; and 10l. for females.

A. G. HARRIS, Secretary.

July 23th, 1864.

NEWSPAPER PRESS FUND.—The President, the Right Hon. Lord Houghton.—A Special MEETING of the Members and Subscribers to the NEWSPAPER PRESS FUND will be holden at the FREEMASONS' TAVERN, Great Queen-street, W.C. on SATURDAY, JULY 30, at TWO o'clock p.m. to receive a report from the Committee as to the position of the Fund, and the Balance-sheet for the year; also, to appoint officers for the ensuing year.—By order,

HENRY G. WARREN, Hon. Sec.

6, Beaufort buildings, Strand, W.C. July 8, 1864.

INSTITUTE of PAINTERS in WATER COLOURS will CLOSE their 30th Annual Exhibition THIS DAY, at their GALLERY, 5a, PALL MALL, near St. James's Palace, Daily, from NINE till dusk. Admission, 1s. Catalogue, 6d.

JAMES FAHEY, Sec.

PHOTOGRAPHIC EXHIBITION. — The TENTH ANNUAL EXHIBITION of the PHOTOGRAPHIC SOCIETY is now open from 10 till 6, at the Gallery, 48, Pall Mall. Admission 1s.; Catalogue 6d.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c. to meet the great public demand; and also for the convenient more extensive execution of all descriptions of hot water, bath, laundry, and steam work.

72—74, Bishopsgate-street Within.

BILLING'S PATENTS.—CHIMNEY TERMINALS. - THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new Buildings.—For prices, apply to the Manager, Mr. TYLER, 12 Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

COMPETITIONS.

BOROUGH of WALSALL.—To ARCHITECTS.—The Walsall Town Council are desirous of receiving DESIGNS for a TOWN-HALL and GAOL—A premium of 30l. will be given for the Design which in the opinion of the Council is the best, and a Premium of 15l. for that which is in their opinion the second-best; and both these sets of plans are to become the absolute property of the Council. Plans of the site, with statements of the offices and conveniences required, and of the conditions to be observed by the competitors, may be had on application to the Town Clerk—By order, SAMUEL WILKINSON, Jun. Town Clerk.

Walsall, 14th July, 1864.

SUSSEX COUNTY HOSPITAL.—Certain ADDITIONS and IMPROVEMENTS to the BUILDINGS of the SUSSEX COUNTY HOSPITAL being required, Architects are hereby invited to send to the Committee of Management, within three months from this date, Plans, Specifications, and Estimates, in accordance with the Medical Officer's Report and other printed instructions to be obtained from the Secretary.

N.B.—The plans and measurements of the present building can be seen at the Hospital.—By order, ARTHUR VESEY, Secretary.

Brighton, 13th July, 1864.

CONTRACTS.

COAST GUARD CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.

Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Kingsdown, near Deal, in the county of Kent, may inspect the Drawings and Specifications at the Coast Guard Watch Room, Deal, or at this Office, between the hours of TEN and FOUR, from TUESDAY, the 2nd, to MONDAY, the 15th of AUGUST, now next ensuing, and both inclusive (Sundays excepted).

Tenders to be sent to this Office not later than TWELVE o'clock at noon, of the 16th AUGUST, under seal and directed to the Commodore Controller-General of Coast-Guard, and endorsed "Tender for Kingsdown."

The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or either of the Tenders.

Dated this 26th day of July, 1864, at the Admiralty, Coast-Guard Office, 12, Spring-gardens, London, S.W.

BLACKFRIARS BRIDGE. — TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland, granite in blocks and in steps, Roach, Portland, and rough rubble. Also for the handsome columns, with moulded bases and carved caps.—Apply to Messrs. THORN & CO. Contractors, on the Bridge.

CROYDON LOCAL BOARD of HEALTH. To CONTRACTORS and OTHERS.—Persons desirous of contracting with the Croydon Local Board of Health for the EXCAVATION and REFILLING of about 12,000 lineal yards of WATER PIPE TRENCHES, in accordance with the specification of Mr. BALDWIN LATHAM, C.E. the Engineer of the Croydon Local Board of Health, can inspect the said specification in the Engineer's Office, in the Town-hall, Croydon, on or after this date. Sealed Tenders, endorsed "Tender for Water-pipe Trenches," are to be delivered at the Offices of the Local Board, in the Town-hall, Croydon, on or before TUESDAY, the 2nd of AUGUST next, ensuing. The Local Board do not bind themselves to accept the lowest or any Tender.

July 16th, 1864. HENRY RICHARDS, Clerk.

CROYDON LOCAL BOARD of HEALTH. To STONE MERCHANTS and OTHERS.—Persons desirous of CONTRACTING with the Croydon Local Board of Health for the SUPPLY of one thousand tons of Broken GRANITE for road purposes, and also GRANITE and PURBECK CURBS of various moulding, in accordance with the specification prepared by Mr. Baldwin Latham, C.E. the Engineer of the Local Board, can inspect the said specification at the Engineer's Office, in the Town-hall, Croydon, on or after this day.—Sealed Tenders, endorsed "Tender for Curbs," are to be delivered at the Office of the Local Board in the Town-hall, Croydon, on or before MONDAY, the 8th day of AUGUST next. The Local Board do not bind themselves to accept the lowest or any Tender.

July 8th, 1864. HENRY RICHARDS, Clerk.

TO BUILDERS and CONTRACTORS.—STAFFORDSHIRE.—Persons disposed to TENDER for the ERECTION of a POLICE STATION and MAGISTRATE'S ROOM at Tipton, may inspect the plans and specifications, and obtain bills of quantities at my Offices, on and after TUESDAY, the 2nd day of AUGUST, until THURSDAY, the 11th of AUGUST. Sealed Tenders, endorsed "Tipton Police Station," must be delivered at my Offices, on or before the 11th of AUGUST, by TEN o'clock, a.m. A charge of 1l. 1s. will be made for each copy of quantities, but will be returned to all parties submitting Tenders for the works. Neither the lowest nor any Tender will necessarily be accepted.

ROBERT GRIFFITHS, Architect.

County Surveyor's Office, Eastgate-street, Stafford, 20th July, 1864.

HARROGATE.—TENDERS are required for the ERECTION of SIX DWELLING-HOUSES, in Princes street, Harrogate, for J. Hixon, esq. Drawings and specifications may be seen at the Somerset Hotel, Harrogate. Tenders are to be addressed to me, and delivered at the said Hotel, on or before THURSDAY, the 4th of AUGUST. The lowest or any Tender will not necessarily be accepted.

J. H. HIRST, Architect

TO BUILDERS.—TENDERS are invited for the ERECTION of a SCHOOL-ROOM and MINISTER'S HOUSE adjoining Bryndynnon Wesleyan Chapel, Regent street, Wrexham. The plans and specifications may be seen in the Vestry of the Chapel, on the 1st, 2nd, 3rd, and 4th of AUGUST next, from TEN to FIVE each day. The Tenders to be sent to Mr R. WILLIAMS, Park Lodge, Wrexham, in a sealed envelope, marked "Tender for School-room, &c." on or before MONDAY, the 15th of AUGUST. The Committee do not pledge themselves to accept the lowest or any Tender. Security will be required from the contractors for the due performance of the work.

Wrexham, July 25, 1864.

CONTRACTS.

TO RAILWAY CONTRACTORS.—The GREAT NORTHERN RAILWAY COMPANY.—SPALDING to MARCH LINE—CONTRACT for WORKS and STATIONS.—The Directors of the Great Northern Railway Company are prepared to receive TENDERS for the CONSTRUCTION of the SPALDING and MARCH LINE (about 19¼ miles long) and STATIONS. Parties disposed to Tender may obtain the specifications and forms of Tender (on which form only Tenders will be received) at the Office of Mr. CUBITT, 37, Great George-street, Westminster, S.W. on or after TUESDAY, 12th JULY; where also the working drawings may be inspected, and copies of the general plan and working section, and other information may be obtained, on payment of 3l. 3s. Tenders sealed up and marked "Tender for Spalding to March Railway and Stations," must be lodged at this Office before TWELVE o'clock at noon on TUESDAY, the 9th AUGUST.

N.B.—The Directors do not bind themselves to accept the lowest or any Tender.—By order, HENRY OAKLEY, Secretary.

Secretary's Office, Great Northern Railway, King's-cross Station, London, 27th June, 1864.

THE GREAT NORTHERN RAILWAY COMPANY.—SPALDING to MARCH LINE—CONTRACT for FISHING BOLTS and SLEEPER BOLTS.—The Directors of the Great Northern Railway Company are prepared to receive TENDERS for the SUPPLY of FISHING BOLTS and SLEEPER BOLTS for this line—about 19¼ miles in length. Parties disposed to Tender may obtain the specifications and forms of Tender (on which form only Tenders will be received), at the Office of Mr. Cubitt, 37, Great George-street, Westminster, S.W. on or after TUESDAY, 12th JULY. Tenders sealed up and marked "Tenders for Fishing Bolts and Sleeper Bolts," must be lodged at this Office, before TWELVE o'clock at noon on 2nd AUGUST.

N.B.—The Directors do not bind themselves to accept the lowest or any Tender.—By order, HENRY OAKLEY, Secretary.

Secretary's Office, Great Northern Railway, King's-cross Station, London, N. June 27, 1864.

THE GREAT NORTHERN RAILWAY COMPANY.—SPALDING to MARCH LINE.—CONTRACT for SLEEPERS. The Directors of the Great Northern Railway Company are prepared to receive TENDERS for the SUPPLY of RECTANGULAR BALTIC SLEEPERS for the line—about 19¼ miles in length. Parties disposed to Tender may obtain the specification and forms of tender (on which form only Tenders will be received) at the Office of Mr. CUBITT, 37, Great George-street, Westminster, S.W. on or after TUESDAY, 12th JULY. Tenders, sealed up and marked "Tenders for Sleepers," must be lodged at this Office, before TWELVE at Noon, on 2nd AUGUST.

N.B.—The Directors do not bind themselves to accept the lowest or any Tender.—By order, HENRY OAKLEY, Secretary.

Secretary's Office, Great Northern Railway, King's cross Station, London, 27th June, 1864.

THE GREAT NORTHERN RAILWAY COMPANY.—SPALDING to MARCH LINE.—CONTRACT for RAILS and FISH PLATES.—The Directors of the Great Northern Railway Company are prepared to receive TENDERS for the SUPPLY of RAILS and FISH PLATES for this Line (about 19¼ miles in length). Parties disposed to Tender may obtain the specifications and forms of Tender (on which forms only Tenders will be received), at the Office of Mr. CUBITT, 37, Great George-street, Westminster, S.W. on or after TUESDAY, the 12th JULY.—Tenders sealed up and marked "Tender for Rails and Fish Plates," must be lodged at this Office before ELEVEN o'clock a.m. on TUESDAY, the 2nd AUGUST, when parties Tendering must be in attendance.

N.B. The Directors do not bind themselves to accept the lowest or any Tender.—By order, HENRY OAKLEY, Secretary.

Secretary's Office, Great Northern Railway, King's-cross Station, London, N. June 27th, 1864.

BOARD of WORKS, WHITECHAPEL DISTRICT.—A meeting of this Board will be held on MONDAY, the 1st day of AUGUST, 1864, at SIX o'clock in the evening, at the Office of the Board, No. 15, Great Alie-street, Whitechapel, to receive TENDERS for the EXECUTION of the several WORKS connected with the sewers and drains of the district, mentioned and described in the specification or schedule of quantities prepared by direction of the Board, for the period of one year. A copy of the specification and form of Tender may be obtained at the Office of the Board, upon payment of 10s. which will be returned to persons tendering. All Tenders must be delivered at the Office previous to the time of meeting, endorsed "Tender for General Sewer Works," and any Tender which is not upon the printed form prepared by the Board, and duly signed by the person or persons tendering, will be rejected. The Board do not bind themselves to accept the lowest or any Tender.

ALFRED TURNER, Clerk to the Board.

15, Great Alie-street, Whitechapel, July 19, 1864.

BOARD of WORKS, WHITECHAPEL DISTRICT.—A meeting of this Board will be held on MONDAY, the 1st day of AUGUST, 1864, at SIX o'clock in the evening, at the Office, No. 15, Great Alie-street, Whitechapel, to receive TENDERS for the CONSTRUCTION of certain BRICK SEWERS, in North-street, Perceval's-buildings and Raven-row, in the parish of Whitechapel, within the said district. Plans, sections, and specifications may be inspected, and further particulars, with printed forms of Tenders, obtained, on application to Mr. FRICKER, Surveyor, between the hours of TEN and FOUR, at the Office of the Board. Sealed Tenders, endorsed "Tender for New Sewers," and in each of which a ten-pound note is to be enclosed, must be delivered at the Office previously to the time of meeting, and any Tender which is not upon the printed form prepared by the Board, and duly signed by the person or persons tendering, will be rejected. The Board do not bind themselves to accept the lowest or any Tender.

ALFRED TURNER, Clerk to the Board.

15, Great Alie-street, Whitechapel, July 19, 1864

TO BUILDERS.—Persons desirous of TENDERING for the RESTORATION of High Easter Church, Essex, can see the plans and specification at the Offices of Mr. FRED. CHANCELLOR, Architect, Chelmsford, after the 4th of AUGUST. Tenders to be delivered to the Architect on or before the 12th of AUGUST. The lowest or any Tender will not necessarily be accepted

[For remainder of Contracts see next Page.

CORPORATION of MANCHESTER.—To MASONS, BRICKLAYERS, JOINERS, and OTHERS.—The Watch Committee are desirous of receiving TENDERS for the CONSTRUCTION of a CHIEF FIRE-STATION, in Jackson's row, each trade to be tendered for separately. Plans and specifications may be seen and quantities obtained, on and after MONDAY, the 25th inst on application at the City Surveyor's Office, in the Town-hall, upon the deposit of One Guinea, which will be returned to all parties sending in Tenders Tenders endorsed "Tender for Chief Fire-Station," to be delivered at the Town-hall, on or before WEDNESDAY, the 10th day of AUGUST. The Committee do not bind themselves to accept the lowest or any Tender.—By order,
JOSEPH HERON, Town Clerk.
Town hall, Manchester, July 23, 1864.

CORPORATION of MANCHESTER.—To CONTRACTORS.—The Waterworks Committee is prepared to receive TENDERS for the CONSTRUCTION of a SERVICE RESERVOIR at Prestwich Hills, about 4 miles from Manchester. Plans may be seen, and printed copies of the specifications obtained, on and after THURSDAY, the 21st inst. on application at the City Surveyor's Office at the Town-hall. A charge of Two guineas will be made for a copy of the specification, which will be returned when the Tender is delivered, whether the party tendering obtains the Contract or not. Tenders, endorsed "Tender for Service Reservoir," addressed to the Chairman of the Waterworks Committee, to be delivered to Mr BERREY, at the Waterworks Offices, Town Hall, Manchester, not later than the 3rd of AUGUST next. The Corporation do not bind themselves to accept the lowest or any Tender.—By order,
JOSEPH HERON, Town Clerk.
Town-hall, Manchester, 2nd July, 1864.

TO CONTRACTORS.—The Trustees of the Town, Port, and Harbour of Whitehaven are prepared to receive TENDERS for SEWERAGE and OUTFALL WORKS for the drainage of the said town, and neighbourhood. Drawings and specification, prepared by Mr. HAWKSLEY, Civil Engineer, 30, Great George street, Westminster, may be seen at his Office, and at the Office of the Secretary to the Trustees, at the Town Hall, in Whitehaven (where bills of quantities and other particulars may be obtained), on and after MONDAY, the 1st day of AUGUST next. Sealed Tenders, addressed to the Secretary to the Trustees, must be delivered at his Office, in Whitehaven, on or before MONDAY, the 22nd day of AUGUST, but the Trustees do not pledge themselves to accept the lowest or other Tender, although they will do so unless there should appear to them to be sufficient reason for the contrary
By order, JOHN COLLINS, Secretary to the said Trustees.
Queen street, Whitehaven, 2nd July, 1864

TO QUARRYMEN, STONE MERCHANTS, and OTHERS.—The Dover Local Board invite TENDERS for the SUPPLY of
1,000 LOADS of BROKEN FLINTS,
500 TONS of BROKEN GRANITE,
500 FEET LINEAL of KERB,
150 FEET LINEAL of CHANNELLING, and
400 SQUARE YARDS of BEST YORKSHIRE PAVING.
The flints to be broken to a size to pass through a 2-inch mesh, are to be delivered at the rate of between thirty and forty loads per week, or in such other quantities as the Surveyor of the Board may direct, from the date of acceptance of the Tender. The granite, to be blue Guernsey broken granite, to be broken to the same size. The whole to be delivered before the 3rd day of SEPTEMBER next. The kerb to be Aberdeen or Guernsey granite, 12 inches on face by 7 inches deep, dressed rectangular. The channelling to be of the same granite, 10 inches on face by 9 inches deep, dressed on face and on one side, and to square and shoot ends. The whole to be delivered before the 3rd day of SEPTEMBER next. The Yorkshire paving stone to be of not less than 2½ inches in thickness, to be delivered before the 1st day of OCTOBER next.
The Flints are to be delivered by the Contractor at such part or parts of the borough as the Surveyor may direct; and all the other materials contracted for into yards to be provided by the Local Board, on the Quay at Dover; and all the deliveries are to be subject to the approval of the Surveyor, who is to have the power to reject any that are not in his judgment in accordance with the terms of the contract. The price to be named is to include freight, labour, and all other charges whatever, except harbour wharfage and local dues at Dover, which will be paid by the Local Board. Payment will be made within two months after the date of the certificate of the Surveyor that any delivery is in accordance with the terms of the contract. Tenders may be made for all or any one or more of the articles above named, and the Local Board shall be at liberty to take any one or more of the materials named in any Tender, without the necessity of accepting all named in such Tender. Any person whose Tender is accepted will be required to execute a deed of contract in accordance with the above terms, to be prepared by the Town Clerk, at the expense of the Local Board; and further particulars may be obtained by inquiry at the Surveyor's Office Tenders, in sealed covers, marked "Tender for Street Materials," are to be delivered at this Office, on or before WEDNESDAY, the 3rd day of AUGUST instant. Each Tender must be accompanied by a letter from one or more responsible persons, undertaking to execute a bond in double the amount of the Tender, for the due performance of the contract. The Local Board do not bind themselves to accept the lowest or any Tender.—By order,
KNOCKER, Town Clerk.
Local Board Office, Dover, July 22nd, 1864

TO BUILDERS and CONTRACTORS.—Parties desirous of TENDERING for the ERECTION of THREE HOUSES at Kentish Town, can obtain full particulars, and see the drawings, at the Office of Mr J. BELCHER, 5, Adelaide-place, E.C any day between the hours of TEN and FOUR Tenders to be delivered on WEDNESDAY, the 3rd of AUGUST, at TWELVE o'clock. The lowest Tender will not necessarily be accepted, but it will be necessary for the builder whose Tender is approved to give sufficient guarantee, and to provide proper sureties, for the due performance of the works.

TO BUILDERS.—GLEWSTONE SCHOOL CHURCH, in the Parish of Goodrich, near Ross.—Plans and specifications may be seen at the house of Mr. WILLIAM MORGAN, Church House, Goodrich; and TENDERS to be sent to my Office, as below, on or before the 13th day of AUGUST. The lowest or any Tender not necessarily accepted.
JOHN V. SEDDON.
12, Park street, Westminster.

TO GAS ENGINEERS, SMITHS, and OTHERS.—The Vestry of the Parish of Chelsea will meet at the Vestry Hall, King's-road, on TUESDAY, the 9th day of AUGUST next, at THREE o'clock in the afternoon, to receive TENDERS from persons willing to CONTRACT for twelve months for the SUPPLY of STREET LAMPS, and the several parts thereof, and for the Works connected with the fitting and fixing thereof in the said Parish, as may be required and directed. Further particulars, with the form of Tender, may be had on application at this Office. Sealed Tenders, signed by the proposed Contractor, with the name and description of two sufficient sureties for the performance of his contract, to be delivered to the Clerk, by or before TWELVE o'clock on the said 9th AUGUST next. The contract deed will be provided by the Vestry. No Tender will be received or attended to unless made on the printed form; and the Vestry do not bind themselves to accept any Tender.—By order,
CHARLES LAREE, Vestry Clerk.
Vestry Hall, King's-road, Chelsea, July, 1864.

TO BUILDERS.—Parties desirous of TENDERING for the ERECTION of a PARSONAGE-HOUSE and STABLES, &c., in Trinity Church District, Oswestry, Salop, may see the plans and specification at my Office, The Lyden, Oswestry, from THURSDAY, the 11th of AUGUST, to THURSDAY, the 18th, inclusive. The lowest Tender will not necessarily be accepted
W. H. HILL, Architect and Surveyor.

MIDDLESEX and ESSEX TURNPIKE ROADS.—To PAVIORS.—Notice is hereby given, that the Trustees of these Roads are willing to receive TENDERS for RELAYING, at Stratford, Essex, each side of Broadway, about 2 one yards of Old CARRIAGEWAY, at per yard superficial, and also for RELAYING the CURB required thereto, at per yard run. Specification of such intended work may be inspected at this Office, on and after MONDAY next, between the hours of TEN a.m and TWELVE at noon. Letters directed to the Trustees, respectively sealed and endorsed "Tender for Relaying Old Carriageway," are to be sent to this Office, on or before WEDNESDAY, the 10th day of AUGUST next The Trustees do not bind themselves to accept the lowest or any tender.
GEORGE DACRE,
Clerk and Solicitor to the said Trustees.
Turnpike-road Office, Bow, Middlesex, 8, 25th July, 1864.

TO GAS WORKS CONTRACTORS, ENGINEERS, and IRONFOUNDERS.—The Llandilo Gas Company (Limited) are prepared to receive TENDERS for the ERECTION of the necessary IRON-WORK, consisting of a 30 feet Gas-holder, Retorts, Condensers, Purifiers, and about 1,500 yards of Cast-iron Gas-pipes.—Plans and specifications may be seen at the Office of the Company, Llandilo, on and after the 1st of AUGUST next, or on application to Mr. E. BAGOT, Llanelly, and sealed Tenders, endorsed "Tender for Gas works," are requested to be sent in, addressed to the Secretary, on or before MONDAY, the 15th of AUGUST next. The Company do not pledge themselves to accept the lowest or any of the Tenders By order,
THOS. EVANS, Secretary.
Llandilo, July 19th 1864.

TO BUILDERS.—TENDERS are required for the ERECTION of an HOTEL, Stabling, and Tap, on the site of the present Bell Hotel, Southgate street, Gloucester. Drawings, specifications, and conditions of contract, may be seen at the Office of the Architect, Mr. HENRY JAMES, Eastgate-street, Gloucester, on and after the 4th of AUGUST next. The lowest or any Tender will not necessarily be accepted.—By order of the Provisional Directors.
THOS. TAYNTON, Secretary pro tem.
Gloucester, July 20, 1864.

BROKEN GUERNSEY GRANITE.—MIDDLESEX and ESSEX TURNPIKE ROADS.—Notice is hereby given, that the Trustees of these Roads are willing to CONTRACT for 600 cubic yards of NEW BLUE GUERNSEY GRANITE, of the best and hardest quality, broken to gauges not less than of two inches and one half an inch, and not less than one inch and one-quarter of an inch The stones after having been broken, must be passed through a screen of one inch and one quarter of an inch gauge, and all stones larger or smaller than the above dimensions will be rejected The broken granite is to be delivered on or before the month of OCTOBER next, alongside the wharf of Mr Barrell Ford Bridge, Ilford Essex. The Trustees to be at the expense of unloading the barges Payments will be made for the granite contracted for, subject to all the conditions having been fulfilled, on the 25th of JANUARY next. Tenders, directed to the Trustees, at this Office, respectively sealed and endorsed "Tender for Broken Granite," accompanied by a sample stone of the quality proposed to be supplied, are to be sent to this Office, on or before WEDNESDAY, the 10th day of AUGUST next, otherwise the Tender will not be considered The party tendering will be required to give an undertaking to truly and punctually perform the conditions of the Tender, under the penalty of £20, as liquidated damages. The Trustees do not bind themselves to accept the lowest or any offer that may be made to them.
GEORGE DACRE,
Clerk and Solicitor to the said Trustees.
Turnpike-road Office, Bow, E. July 26, 1864.

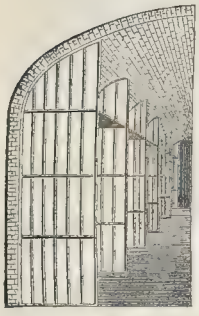
PATENT WORCESTERSHIRE RANGE.



PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.
The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.
It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.
Extracted from the "London Daily Telegraph," May 19th, 1862.
"INTERNATIONAL EXHIBITION, CLASS 31
"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of *side* by *side*; and the ROASTER is constantly replenished with fresh air."

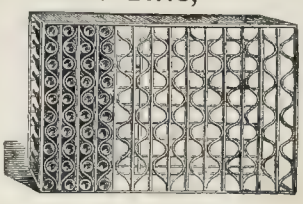
WROUGHT IRON WINE BINS.

FARROW & JACKSON
Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.



Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with
SEPARATE REST FOR EACH BOTTLE,
Peculiarly adapted for Private Cellars.
No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents o the Bin.

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS.

These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

J. BARTON, having entered upon the extensive Premises, No. 370, Oxford-street, adjoining his Patent Stable Fitting Manufactory, begs to solicit attention to his large and well-selected STOCK of STALL and LOOSE-BOX FITTINGS, HARNESS ROOM REQUISITES, &c.; also to invite inspection of the newly erected Practical Stable, now on view. Illustrated Catalogues on receipt of Four Stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

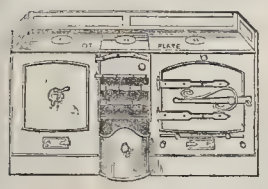
SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)
WHOLESALE IRONMONGERS,
13, KING STREET, SNOW HILL, LONDON.

NUT PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great Improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Camp at Aldershott alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.



New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

, Illustrations and Particulars sent on application.

WAREHOUSES FOR NAILS, PIPES, GUTTERS, &c. IN ST. JOHN'S COURT.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

THE FURNISHING OF BED-ROOMS.

HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that to judge properly of the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional show rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed room Furniture, beyond what they believe has ever been attempted, but also to provide several small rooms for the purpose of keeping complete suites of Bed room Furniture in the different styles.

Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.

Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.

The Stock of Mahogany Goods for the better Bed rooms, and Japanned Goods for plain and Servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.

Every attention is paid to the manufacture of the Cabinet-work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises.

They part. ularly call attention to their Patent Spring Mattress, the Sommier Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.

HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by Post.—196, 197, 198, Tottenham court-road, London.

SMOKY CHIMNEYS,

S. DEACON
Respectfully invites the attention of Architects Builders, &c. to his
PATENT LOUVER CHIMNEY CAP,
which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail.
The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.
Prospectus, with testimonials, forwarded on receipt of Postage Stamp, by
S. DEACON,
69, ALMA STREET, HOXTON N.
MANUFACTORY:
HEMSWORTH STREET, SAINT JOHN'S ROAD, HOXTON, LONDON, N.

CAUTION to ARCHITECTS and

BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS;
SMITH'S PATENT WEATHER-TIGHT WATER BAR; and SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS;
The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

BUILDINGS AND SHIPS EFFECTUALLY SECURED AGAINST LIGHTNING.

PATENT LIGHTNING CONDUCTORS,

according to the system of Sir Snow Harris, F.R.S. as now universally adopted in every department of the Public Service, supplied and carefully fitted in every detail, under the immediate instructions of Sir Snow Harris, by J. W. GRAY, who has effectually secured a large number of ships, public buildings, and magazines against the destructive agency of lightning, including the Houses of Parliament, magazines, afloat and on shore, of the War Department, and many churches and other important structures. Buildings surveyed, and plans and estimates submitted, if called for.
J. W. GRAY & SON, 114, Fenchurch-street, E.C.

LIGHTNING CONDUCTORS.

R. S. NEWALL & CO. Patentees of the COPPER ROPE LIGHTNING CONDUCTOR, supply the same, with the point and all staples, complete for fixing, at the following prices:—
Three eighths inch diameter ..... 1s. 0d. per foot.
Half-inch diameter ..... 1s. 6d. „
Five-eighths-inch diameter ..... 2s. 0d. „
R. S. Newall & Co.'s Patent Copper Rope Lightning Conductor is being applied by architects, engineers, and scientific men, in all parts of the world.
Offices—130, Strand, London.
„ Gateshead-on-Tyne.

Sash Weights ..... 0s. 0d. per cwt.
ST. PANCRAS IRON WORK COMPANY,
OLD SAINT PANCRAS ROAD, AND YORK ROAD, KING'S CROSS.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT & CO. Manufacturers

of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show, every article marked in plain figures. Patentees, and Manufacturers of the Mercurial Gas Regulator. Complete Pattern-book and Price-lists 12s.—Nos. 55 and 56, High Holborn.

WINDOW BLINDS.

E. ADKINS,
HIGH STREET, ST. JOHN'S WOOD,
REGENT'S PARK, N.W.
OUTSIDE SUN-SHADE,
AND
SPRING ROLLER MAKER
TO THE TRADE.
Patent Self-adjusting Venetian Blinds, requiring no Fastenings for the Cords. Illustrated List of Prices on receipt of One Postage Stamp.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

WINDOW-BLIND MATERIALS.—

H. & J. DOVE, 31, Ludgate-hill, London, E.C. SUPPLY the TRADE with every description of MATERIAL for INSIDE and OUTSIDE WINDOW-BLINDS, comprising Sun Blind Ticks, Linen Hollands; Buff, Green, and White Unions; Green, Crimson, and Blue Tammies; Fancy Printed Blinds; Cords, Tassels, and all kinds of Webs and Lines for Venetian Blinds; also every quality of Patent Sash Lines.—Price lists on application. Established A.D. 1797.

THOMAS TURTON & SONS,

MANUFACTURERS OF
CAST STEEL for Cutlers, Punches, Taps and Dies, Turning Tools, Chisels, &c.
CAST STEEL Piston Rods, Crank Pins, Connecting Rods, Straight and Crank Axles, Shafts, and Forgings of every description.
FILES marked T. TURTON. Superior to any other make.
(See results of trial in the *Times*, July 26th, 1851.)
TOOLS of all kinds, for Engineers, Railways, Contractors, &c. &c.
EDGE TOOLS marked WM. GREAVES & SONS. Electro Boracic Steel, warranted to wear out three Tools made of Cast Steel.
DOUBLE SHEAR STEEL, | SPRING STEEL,
BLISTER STEEL, | GERMAN STEEL,
SPRINGS, BUFFERS, AND CAST STEEL TYRES,
For Locomotive Engines, Railway Carriages, and Waggons.
SHEAF WORKS and SPRING WORKS, SHEFFIELD,
LONDON WAREHOUSE, 23, QUEEN STREET, CITY,
Where the largest Stock of Steel, Files, Tools, &c. &c. in the World may be selected from.

IRON ROOFING of CORRUGATED IRON,

Wrought Iron, principal Roofs covered with Slates, Iron Bridges, Girders and Railings; also Portable Buildings for Dwellings, Farm Purposes, Churches, Chapels, Schools, Theatres, Concert or Dancing Rooms, &c. suitable to all Climates, fixed complete in Town or country, or packed for exportation.
For Designs and Estimates apply to
RANDAL STAP, Contractor,
No. 32, KING WILLIAM STREET, E.C.
Where numerous Drawings and Photographs may be seen.
N.B. The Iron Buildings manufactured by R. STAP are not fixtures on Leasehold Property.

TO IRONMONGERS, BUILDERS, &c.

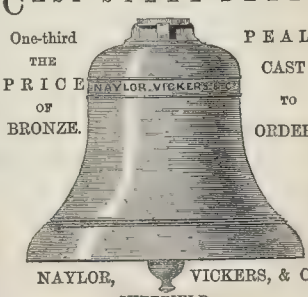
PATENT WROUGHT-IRON WELDED

TUBE for GAS; Galvanised ditto, for Water; High-pressure Cocks, &c. Manufacturers of Dr. Arnott's Improved Ventilators.
HULETT & CO. 55, High Holborn.

DAY and GAS LIGHT REFLECTOR

MANUFACTURER.—THOMAS FOX, 90, Hatton Garden, E.C. and 38½, Charles-street, Hatton Garden, E.C. A large assortment of Silvered Glass Globes, Lamp Spires, &c. always on hand. All kinds of Rent Glass Silvered.
N.B.—The usual discount to BUILDERS and the TRADE.

DOVER FOUNDRY and IRON WORKS,



STAPLE STREET, BOROUGH, S.E.

Girders, Wrought.
Ditto, Cast.
Columns.
Tanks.
Railings.
Staircases.
Machine Castings.

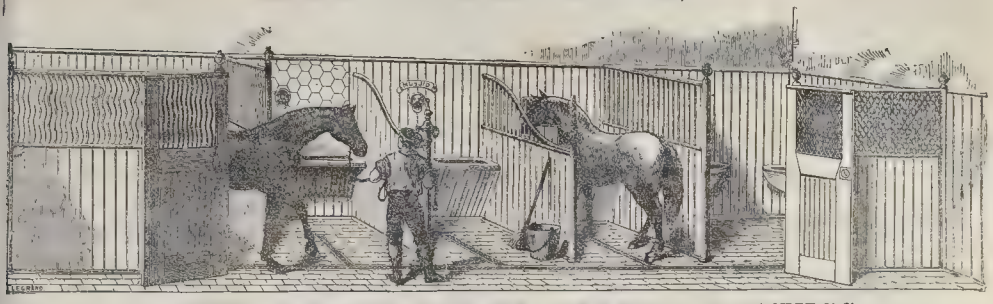
SHEFFIELD.

ST. PANCRAS IRON WORK COMPANY,



OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION.——INSPECTION OF SHOW-ROOM REQUESTED.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

THE PRIZE MEDALS

(LONDON, 1851. PARIS, 1855. LONDON, 1862)

Awarded to

COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.

For progressive and general improvements in

STABLE FITTINGS AND HARNESS BRACKETS.

PATENTEES AND ORIGINAL INVENTORS OF

THE IMPROVED SYSTEM OF STABLE AND HARNESS FITTINGS,

COMMENDED BY THE MOST COMPETENT JUDGES IN THE UNITED KINGDOM.

The advantages of these Fittings over others are,—Improvement in shape, increased capacity, no projections, free ventilation, preventing foulness in the rack, facility in fixing, safety from accident, durability in construction, and cleanliness in use.

STALL-FITTINGS TO ANY WIDTH OF IRON ENAMELLED, OR GALVANIZED IRON.

COTTAM & CO. exhibit for inspection at their Iron Works, 2, Winsley-street, W. an extensive range of full-sized Stalls, Loose Boxes, and Harness Rooms, the most complete that can be imagined.

ILLUSTRATED CATALOGUES FREE, on application to

COTTAM & CO., No. 2, WINSLEY-STREET, OXFORD-STREET, W.

COTTAM & CO.'s ONLY ADDRESS IN LONDON IS 2, WINSLEY-STREET, W.

N.B.—WINSLEY-STREET IS THE STREET OPPOSITE THE PANTHEON.

MINTON, HOLLINS, & CO. Stoke-upon-Trent, beg to inform architects, the gentry, and others, that, in consequence of the increasing demand for their Encaustic and Mosaic Pavements, and with the view of facilitating the execution of orders, they have opened an additional Show-room, at their Establishment, No. 5, Conduit street, London, where experienced draughtsmen will be constantly in attendance, to afford all information required.

DRAWINGS and ESTIMATES, on the receipt of plans, will also be promptly furnished, on application at the Manufactory, Stoke-upon-Trent.

MINTON & CO. take the present opportunity of stating that they have always in stock a large and varied assortment of tiles, suitable for flower boxes, stoves, and other ornamental purposes.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862.

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern-book, designed by M. Digby Wyatt, Esq., together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

TERRA COTTA and Fine STONEWARE POTTERY, warranted to stand Frost.

JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economised the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.

A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."

Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Crosses, Terminals, Vases, Statues, Brackets, Consoles, Garden Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c. &c.

Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.

London Office, 377, Oxford-street, W.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION.

MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 39 and 40, Upper Belgrave-place, Pimlico, S.W.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City-road Basin, N. Thirdly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and Sixthly, that the "Reports of the Juries," page 561, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Toileries," Tunstall, Staffordshire, as the first of the kind in the world.

PLUMBER'S BUSINESS, near Grosvenor-square.—The LEASE, GOODWILL, and FIRST CLASS CONNEXION of an old-established BUSINESS TO BE DISPOSED OF. The house contains eleven rooms and suitable workshops, held on long lease at a low rent.—Apply to Mr. COX, Auctioneer, &c. 94, New Bond-street, W.

MR. PATCHING offers a CARPENTER'S and JOINER'S BUSINESS, admirably situate at the West End. Profits average 3l. 5s. weekly; capable of extension. Will be sold a bargain if taken immediately. Proprietor obliged to go abroad. This is really worth immediate attention.—Apply at the Auctioneer's, 32, Cranbourn-street, Leicester-square.

TO ARCHITECTS, BUILDERS, and CONTRACTORS.

QUARRY FOR HEAVY MATERIALS.

Corgrig Quarry supplies Mountain Limestone from beds which vary in thickness between eight inches and six feet. The length and the breadth of the slabs or blocks to order can be secured. The dip of the beds is favourable for quarrying. The quality of the stone is extremely toughness and freedom from flakes, making it equal to granite for bridges, embankments, quays, and all heavy work, besides having a fine and close texture, admitting the best polish. A first-rate road of but half a mile, connects the Quarry with the Harbour of Foynes, the River Shannon giving easy shipment on board sea-going vessels. Price, F. O. B. 6d. per cubic foot, roughly scabbled.

Apply to STEWARTS & KINCAID, 6, Leinster-street, Dublin; or O. N. KNOX, Esq. Corgrig Lodge, Foynes, Ireland.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at

W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD, N.W.

OPPOSITE THE YORKSHIRE STINGO,

A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.

CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

ESTIMATES WILL MEET WITH PROMPT ATTENTION.

ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the

EMPORIUM, J. W. BIRD & CO.'s, 143½ and 145, EUSTON ROAD, N.W.

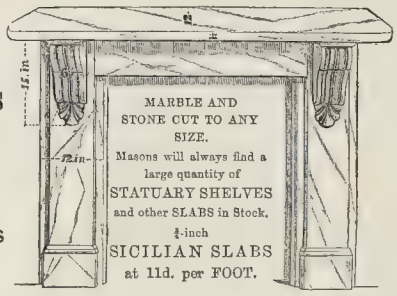
BOX STONE CHIMNEY PIECES for 5s. 6d.

Truss ditto ditto, 11s. 9d.

MONUMENTS AND TABLETS

in great variety, equally low in price.

MASONS' WORK OF ALL KINDS CONTRACTED FOR,



AND EXECUTED WITH DESPATCH IN TOWN OR COUNTRY.

A STOCK OF

500 CHIMNEY PIECES

always to choose from.

PRICE LIST ON APPLICATION.

MARBLE BOX CHIMNEY PIECE for £1 5s.

First-class Bed-room ditto, £1 10s.

FIRST-CLASS

TRUSS MARBLE CHIMNEY PIECES from £2 5s. to £3 5s.

A WELL-CARVED

STATUARY CHIMNEY PIECE,

with 13½-inch *Piers*,

suitable for a Drawing-room, which must be seen to be believed,

FOR THE SUM OF £6.

Net Prompt Cash.

PRICE LIST ON APPLICATION.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l.* per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.

Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.

Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.

This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

THE LAND SECURITIES COMPANY

(Limited).

Capital, 2,000,000*l.*

DIRECTORS.

His Grace the Duke of Marlborough, President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

John Ennis, esq. M.P.
Sir James Fergusson, Bart. M.P.
Col. Fulke Southwell Greville, M.P.
Sir John Charles Dalrymple Hay, Bart. M.P.
Sir Laurence Peel, Bart. M.P.
Sir Henry Strachey, Bart. M.P.
William Dargan, esq.
Henry Farquhar, esq.
Sir John Gray.
John Horatio Lloyd, esq.
Hon. William Napier.
Hon. Henry Petre.
Sir Charles Reed, Bart.
Granville Richard Ryder, esq.
Philip Twells, esq

OFFICES.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, East End (54, Old Broad-street, *E.C.*), Office of International Financial Society.

The Company will make advances, repayable with interest, at long terms, on the security by first charge upon, or by terminable annuities, upon the security:—

1st. Of landed estates, first class house-property, and real property of all descriptions and tenures, and of all estate and interest therein.

2nd. Of rates, dues, assessments, and impositions of all descriptions, raised or imposed by or under the authority of any Act of Parliament, public or private, Royal Charter, Commissions of Sewers, Drainage, or other sufficient legal authority.

3rd. Of charges and securities of all descriptions upon or affecting landed estates, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

Temporary advances will be made on landed estates, and on houses in course of erection, with or without the deposit of title deeds; and they undertake the management of special investments.

For further information, and forms of application, apply to the Hon WILLIAM NAPIER, Managing Director, the Land Securities Company (limited), 32, Charing-cross, London, S.W.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for the admission of Pure Air.

THROUGH THE EXTERNAL WALL.

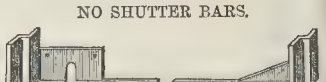
These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London.

TARPAULINS, MARQUEES, &c.

for SALE or HIRE.
SCAFFOLD AND HEMP ROPE FALLS.

H. PIGGOTT & SONS,

39, Bishopsgate street Without, E.C. Manufacturer, by appointment, to Her Majesty's Honourable Board of Ordnance.



TO BUILDERS AND OTHERS.

TARPAULINS for COVERING WORKS.

Asphalte for Railway Arches and Iron Bridges.

The Builder.

VOL. XXII.—No. 1121.

*The Design and Construction of Harbours.**

VER since the successful erection, in 1810, of that remarkable work the Bell Rock Lighthouse, the name of Stevenson has been as intimately associated in the public mind with what may be termed "civil marine engineering" as that of the similar but differently spelt name with railway engineering. There is, we believe, a saying that a banking-house never lasts for more than three generations. A frugal, hardworking man, taught in the painful school of adversity, founds a house which is often dilapidated by his children, who are brought up to look at life through fine carriage windows. Successive alternate upper middle-class generations often vibrate like a pendulum between wealth and poverty. A similar observation can be made with regard to manufacturing mechanical engineers who, if at all successful, generally accumulate much wealth. It is but seldom that the second or third generation continues a difficult business of this kind with the same success as the original founder. Civil engineers who, as a rule, do not undertake contracts, do not—generally, at least,—accumulate so much wealth. Their descendants, free from the allurements of too much pudding, and naturally attracted by the interesting nature of the work, generally follow the family profession. Even on the supposition that there be only average abilities to start with, the aid and counsel of the parent directing the education, tastes, and first start in life of the son, or near relation, generally ensure success, if only acting in combination with fair conduct. And then, as the Germans say, "*Wem Gott ein Amt gibt, dem gibt er auch Verstand*;" and early practice, even if it do not make perfect, certainly gives a long start in the race of life. We may thus now see many successful civil engineers whose profession has been an heirloom in their families ever since there was such a thing as engineering.

But even without this being the case in the source of the work now before us, as we always look upon it as a good thing when practical men write about their practice, we should regard this book with pleasure. We hold it to show almost a want of principle, at any rate a narrow selfishness, that men engaged in large and important scientific undertakings should not put some of their store of knowledge on record for the use of others and other generations. It is a great loss, a loss even in material wealth, when a man of this kind is gathered to his fathers without having recorded some of the knowledge he has gained. His ground has perhaps to be gone over again by others, at great expense of time and money, causing losses that can scarcely be directly or indirectly estimated. We are now thinking of more than one engineer who has illiberally kept to himself the result of expensive experiments. But this reproach cannot be addressed to the builder of the Bell Rock Light-house, nor to Messrs. T. & A. Stevenson, who have worthily done, in this and more practical ways, what we think is a duty to the country. Several excellent works have proceeded from their pens, amongst which we may mention the rudimentary treatise on light-houses, by Mr. Alan Stevenson, and a work on lighthouse illumination by Mr. Thomas Stevenson. The book now before us is by the last gentleman. It is substantially a reprint, but with many additions, of the article on harbours in the "Encyclopædia Britannica." It is stated by the author that the late Professor Hosking intended to republish that article, in company with others from the "Encyclopædia," "as an independent treatise on civil engineering and the constructive sciences," but, owing to the death of the professor, that project was given up, and Mr. Stevenson now publishes the article by itself, and in an improved form. The work begins by a classification of the different kinds of harbours into "either havens for the protection of ships during storms, or as ports for commercial purposes." The difficulties to be encountered by the engineer may be said to generally increase with the size of the works he undertakes. At any rate, there is much more disaster through any false step. For this reason, there is a much smaller field for ingenuity, and a greater demand for judgment, as one advances from the designing and construction of small machines, towards those of larger engines, and to the still larger constructive works. Designing harbours is one of the most difficult branches. It would be impossible, in searching for precedents of work, to find perfect identity in the physical peculiarities of different places. One has to inquire as to the most economical design, sufficient for the class of shipping to be accommodated—exterior works,—and suitable to the local requirements of the station—interior works. Mr. Stevenson does not enter much into details as to the inner works of harbours, "as from their situation they are necessarily protected from heavy seas, and are consequently more nearly of the same character at different harbours than the exterior works, the nature of which must vary more or less with every locality."

The exterior works of harbours are classified under:—Harbours of refuge and anchorage, breakwaters, deep-water and tidal harbours for commercial purposes, canted or curved piers, straight piers, and quays or wharfs. The various conditions determining the general character of the works are, the kind of shelter of the situation; the action of the waves with regard to the situation; whether it is necessary to protect the berthage by means of a curved or a canted pier; whether it is necessary to inclose the space of water between two piers inclined to each other; and whether recourse must be had to a "compound harbour," or one harbour within another, in which "the outside waves are first reduced by expansion into the area of the outer or stilling harbour." After settling the general character of the works, the details adapted to the local characteristics have next to be considered. The work is thus devoted to an examination of the detail questions affecting the construction of harbours, such as the geological features of the shore, its exposure, the local force of the waves, the range of the tides, the depth of water, the proximity of deep water to the pier itself, and the angle made by the coast-line with the direction whence arrive the heaviest waves. Mr. Stevenson draws the important inference, from his own observations and those of others, that in exposed situations mud cannot repose near the surface, and that, therefore, if "we find in front of a proposed harbour that mud reposes within a few fathoms of the surface, we have in that fact certain ground for concluding that our works will never be assailed by a very heavy sea." As the substance of his article on the generation of waves, he considers that "the most exposed coasts may therefore be regarded, *cæteris paribus*, as those on which the waves generated in the line of maximum exposure come dead upon the shore." Smeaton is here quoted as placing the force of the waves as "subject to no calculation;" and Mr. Stevenson endeavours to form a more accurate estimation of those forces thus designated by "our greatest marine engineer." As showing the enormous power of the waves of the sea may be cited the instance that at Bishop Rock Lighthouse, "a bell was broken from its attachments during a gale in the winter of 1860, and at Uist a door was broken open, at a height of 195 ft. above the sea." Blocks of 50 tons weight have been moved by the sea at Barrahead, one of the Hebrides. The ultimate strength of any sea-works must be in a great measure determined by the actual local force of the waves, and the importance is clear of measuring this force in order to obtain a point of departure. Mr. Stevenson has used for this purpose a marine dynamometer, consisting of a cast-iron cylinder bolted to the rock where the experiments are to be made. Within the cylinder is attached a strong steel spring, abutting against a number of rods sliding in the cylinder. To these rods is fixed a disc against which the waves impinge, and communicate motion to the rods by compressing the spring. Rings of leather slide on the guide rods, and indicate how far the rods have been pushed back. With such instruments, more or less modified to suit special circumstances, Mr. Stevenson has made a large number of observations, dating from 1843. He thus, January 12th, 1848, found that a very heavy swell exerted a force of no less than 5,032 lb. to the square foot.

The use of these instruments was attended with certain difficulties,—leaving alone some complications in their construction. In the first place, it was not found desirable to select a site for the observations on a very low level, "as it has not unfrequently happened, during a gale, that for days together no one could approach the dynamometer to read off the result, and to readjust the indices to zero." The use of a heavy spring is also attended with the objections that, without subsequently testing it, we could not be certain that it had not taken a permanent set. In 1858, the author made a series of experiments at Dunbar, which were continued till the completion of the new sea-wall, in order to ascertain the relative forces exerted by the waves at different levels. The various dynamometers attached to the old *curved* sea-wall had necessarily to be sunk nearly flush with the masonry. In order to check the indication of the leather rings, holes were made in the under-side of the rod, and filled with small shot, which were expected to drop out when the rod was pushed so far out as to leave them unsupported. This plan did not answer, and the use of a cylinder of wax, to be scratched by a pin, was proposed by a friend of the author. It seems to us that a certainly simpler, and probably more efficient, marine dynamometer might be made for these important purposes. It could consist of a bored out cylinder fitted with a plunger, attached to the disc intended to receive the impact of the waves. Behind the plunger, and filling the portion of the cylinder behind the plunger, would be water, and the piston could be kept tight by means of an elastic diaphragm, attached to the piston itself, and to a cover at the back, thus forming the two joints. The water could then communicate with a metallic gauge, such as Bourdon's or Schaefer's. The pressure given to the water would thus be indicated by the hand of the gauge, which could be made self-registering, as is often the case with metallic hydraulic gauges. This instrument would have another great advantage, inasmuch

* The Design and Construction of Harbours. By Thomas Stevenson, F.R.S.E. Reprinted and enlarged from the article "Harbours," in the eighth edition of the "Encyclopædia Britannica." Edinburgh: Adam & Charles Black. 1864.

as the movements of the index could be seen from afar by means of a telescope, while the maximum results could be recorded by the fixed hand. It is scarcely possible to prognosticate in advance the efficiency of anything of this kind, but our idea is perhaps worth the consideration of Mr. Stevenson.

The true cause of such dangerous breaking waters as the Bore of Duneansby, and the Merry Men of Mey in the Pentland Firth, is given to be "the swell of the ocean encountering an opposing tidal current." Mr. Scott Russell's, statement, that "he has never noticed a wave so much as 10 ft. high in 10 ft. water, nor so much as 20 ft. high in 20 ft. water, nor 30 ft. high in 5 fathoms water; but he has seen waves approach very nearly to those limits," is here quoted with approval. The depth of water for some distance in front of a work may thus be said "to be the ruling element which determines the amount of force which it has to resist." The waves exert their destructive influence by the propagation of vibrations, by the direct influence of the fluid on the back joints of the face stone of the quay, by the sudden condensations and expansions of air in the hearting, and by the hydrostatic pressure of the water which may be forced through the seawall. Very curious instances are cited of damage resulting from rarefaction of the air outside the masonry, produced by the sudden back-draught caused by the relapse of a heavy wave after it has broken against a structure. The entrance-door of the Eddystone Lighthouse has thus been driven outwards,—though secured against the outside by strong bolts—by the atmospheric pressure acting from the inside of the tower. Stones are thus found to suddenly start from the faces of sea-walls from this cause. The great importance of a high specific gravity in the quarries to be used for harbour purposes, has led Mr. Stevenson to give a table of the specific gravities of different kinds of rock. He obtained the amounts very expeditiously by means of a spring balance, from which was suspended the specimen, the reading noted, and after being immersed in water, the diminished weight is again noted. We should say that the spring itself should be occasionally tested, in order to be certain that its elasticity had not been affected.

The great importance of a high specific gravity in the materials for sea-works, is clearly shown further on in a comparison between the requirements of sea and land architecture. The perfection of marine masonry would be attained in the construction of a pier so that, "on the abstraction of a stone at the bottom, the whole vertical section of masonry should at once sink so as to fill up the void." The lower courses would then be kept in place by the unreduced weight of the upper portions. In land architecture just the contrary is obtained, and some of the lower stones of a wall may often be pulled out without endangering the structure.

As showing the necessity of a good "loose," or point of departure, in a harbour, the digest of 266 wrecks, taken from the Harbour of Refuge Commission report, is here given. The table proves that more than one-fifth of the whole took place on either entering or leaving the port; and if to this be added the vessels damaged on piers through insufficiency of the ropes, it is seen that some of the greater perils of the sea have actually to be encountered in or near the port. In the article on docks an inquiring mind may learn "what is a graving dock;" and we hope that Lord Robert Cecil will take an early opportunity to call the attention of his parliamentary friend to this source of information. Those who wish to dive deeper will find an excellent comparison between the relative advantages of slips and graving docks. We find here a contradiction to the general statement that the *teredo navalis* is of recent appearance on our shores. It appears that they were unpleasantly known in Scotland upwards of 300 years ago, and that "they were then firmly believed to be young sea-fowl, of the kind called *klaiks*. Mr. D. Stevenson has directed attention to the fact that woody fibre is eaten by the worm, though the outer skin had been protected by creosoting. "At Scrabster, Leith, Invergordon, and other places, where the timber was thoroughly creosoted, it has been very much destroyed by the worm." In other places, however, this has not been found the case.

One of the most important and interesting problems of the day, involving vast interests, is the question as to the durability of cast and wrought iron when in contact with sea-water. Mr. Stevenson thinks that, "where there is room for choice, neither cast nor malleable iron should be used as a *principal* constituent of sea-works which are to be so deeply submerged as to become difficult of inspection or repair." There is much too little recorded experiment on this question. From an examination of a cannon-ball, probably about three centuries old, Mr. Stevenson concludes that upwards of $\frac{3}{4}$ of an inch in a ball $4\frac{1}{2}$ inches in diameter, are oxidised within a century, the material being placed so as to be alternately wet and dry. According to Mr. Mallet's experiments on cast-iron immersed in clear salt water, only from 1-10th to 4-10ths in depth, in castings 1 in. thick, would be destroyed in a century. Mr. T. Stevenson has made some remarkable observations on certain cast-iron gratings fixed to the Bell Rock Lighthouse, completed in 1810 by Mr. R. Stevenson. "Many of these gratings, which are not constantly immerged, are now decayed in different places, cavities having been found fully half an inch deep; thus giving 1 in. to the century for castings 1 in. square." The important circumstance was observed that the decay is very much confined to parts where there have been air-holes. Once the water gained access to these holes it would be retained, and the effects of constant immersion would be locally produced. This points to the especial importance of avoiding blow-holes in castings exposed to the action of sea-water, as also to the necessity for the absence of any hollows in which the water might lodge. But, even with an originally perfectly sound casting, Mr. Stevenson found its specific gravity was reduced to 5·63, and its transverse strength from 7,409 to 4,797 lb., without showing any external appearance of decay. Another apparently sound casting was found to have lost nearly half its strength in about fifty years. Iron in the form of borings, mixed with gravel to form a concrete, bids fair to be of great use. It has been introduced by Mr. Leslie at the Stanraer pier; and a careful account of the composition and application of this concrete is given in a letter from the resident engineer of those works. This is clearly, in its way, an application of the old "rust joint" used from the beginning for steam-joints, and for the composition of which such minute directions were given by Watt. After two months and a half only, the layers of borings used at Stanraer were found caked into a hard mass, and particles of gravel were seen adhering to the sides of the layers, thus showing that the concretionary influence of the borings is extending, and will in all probability, in course of time, completely bind the intervening layers of gravel." The gravel was also found very strongly coloured. The last chapter is on miscellaneous subjects relating to harbours; such as the deposits of silt, the movement of heavy shingle by the surf, the shoaling of natural bays, the cause of inclosed harbours keeping open, the efficiency of back-water scouring, artificial scouring, the duration of scouring, the effective velocities of currents, dredging, dredging in exposed situations, the removal of silt by pumping. A proposition here examined is that the commercial value of harbours or rivers probably increases as the cubes of the depths of water. An interesting diagram of the height of the waves at Lybster Harbour is given for the purpose of graphically showing the suddenness of the gales visiting our eastern coasts, as also the comparative eligibility of the summer and winter months for carrying on marine works. The highest waves are those in November and December, and the lowest from May to October. Lighthouses are next briefly treated on. A suggestion by the author that gas-pipes ought to be laid out "to any inaccessible place, the position of which required to be marked by night," is carried out on the Clyde, near Port Glasgow. The gas, kept constantly burning, is raised and lowered as required by means of stopcocks on the shore. Suspension piers, Mr. Mitchell's screw piles and screw moorings, fenders, moving hauls, are briefly described, and the advantages of two entrances to a harbour are briefly set forth. The Bill brought into Parliament by the President of the Board of Trade, and passed, for granting for the construction of harbours, loans not in any one case exceeding 100,000*l.*, at the rate of $3\frac{1}{2}$ per cent., appears to be mainly a consequence of Mr. Stevenson's article in the "Encyclopædia Britannica."

This work is undoubtedly of great value; it conveys a large amount of information, expressed very clearly. It is by no means abstruse, and an intelligent member of a Parliamentary committee on docks and harbours might with advantage spend a couple of days in reading this work, and thus at least learning something more explicit about a graving dock than merely its connexion with ships. This small work also contains the results of a large amount of experimental observation, against which, however, we have to make an occasional objection, that the means of making these observations were scarcely so precise and accurate as we could wish. The text is illustrated with ten plates of different marine works. These illustrations, though of course drawn to scale, are on too small a scale to be of much real use. The value of works like these increases in a direct ratio with the size, and completeness of, and number of dimensions on, the drawings. Little engineering and architectural drawings are, as some one has said, like little birds, the sex of which it is impossible to ascertain. We should also have been glad to see this work more completely indexed. In these fast times, in which, unfortunately, every one is in more or less of a hurry, an index is of great importance, and an alphabetical index is scarcely sufficient.

THE THAMES EMBANKMENT.*

FOR that personification of the constituency of the newspapers, "the general reader," information hitherto given respecting the Thames Embankment, may, by some writers, be deemed sufficient. But the columns of the *Builder* will be expected to afford particulars of other portions of the comprehensive design than the mere river-wall between Westminster and Whitefriars, and to describe those numerous and varied features of plan, and contrivances in construction, which the work of the two contracts now in hand presents. The entire scheme of the Embankment not only includes both sides of the river, but is connected as well with the sewerage, as with street-improvements in the City and the western part of London, more important than have been previously undertaken in similar period of time; and before looking at the separate landing-stairs and steam-boat piers designed, and structural features of the portion of the undertaking in progress, we may do well to note what were the intentions, so far as we can gather them, of the legislation of 1862 to which we referred in our last, and the proceedings of the Metropolitan Board following thereon, as well as the steps that were taken in the course of last year.

"The Thames Embankment Act, 1862," did not include the new street to the Mansion House: this was provided for by an Act of the following year. In 1863, also, an Act for a portion of the Embankment of the south side was passed; and notice was given of application to Parliament for powers to take additional land in Stangate and Palace New-road. In both years, reports appeared from the Commission originally named in 1861, and from Mr. Bazalgette, on the Southern Embankment; and, in connexion with the Northern Embankment, on improvements that had not been included in the Act of 1862, which has been named.

This Act of 1862 authorised works comprising not only the length of embankment since contracted for, but a viaduct to commence at the eastern boundary of the Temple, and to terminate near to the western side of Blackfriars Bridge; also a roadway 100 ft. wide on the embankment, and 70 ft. on the viaduct; a transverse, or crescent-formed, approach-road of not less than 40 ft. in width, and a gradient not steeper than 1 in 30, communicating with Surrey-street, Norfolk-street, and Arundel-street, which were to be extended; a street from the east side of the Middlesex end of Hungerford Bridge, to terminate in Wellington-street South, and to communicate by short streets with Villiers-street and Buckingham-street; a street joining Whitehall-place with the before-mentioned new street, near to George-street, Adelphi; a street from Whitehall, opposite the Horse Guards, through Whitehall-yard, to the Embankment near Whitehall-stairs; and lastly the reclamation and inclosing of the foreshore between the present bank of the Thames and the new line. Certain land in the parish of St. Margaret's, Westminster, however, was not to be taken without consent; and there were many other restrictions and stipulations.

The Act gave power to, and required, the Conservators of the River Thames to take from the bed of the river, and to deposit, at the cost of the

* See p. 537, *ante*.

Board, materials for the Embankment, when applied to. All the land reclaimed from the river, on the south of the streets described as running to Wellington-street, and Whitehall-place, not required for streets or roads "nor otherwise specifically appropriated" by provisions of the Act, "and lying between an imaginary line drawn from the eastern boundary of the houses on the east side of Cecil-street to the Embankment roadway on the east, and the Crown lands on the west, and the Embankment roadway on the south, together with the lands" on the southern side of the approach-road before referred to as connected with Norfolk-street, Surrey-street, and Arundel-street, was to be vested in the Board and maintained as recreation-ground; but, subject to provisoes, the Board were allowed to grant in perpetuity, or for a term, the reclaimed land to any owner of ground in front of which the roadway would pass.

Generally, as regards the lands acquired by the Board, and not wanted for the purposes referred to in the Act, or specially excepted, the Board might lease the ground and dispose of the ground-rents, or might sell. But before disposing of such lands, the Board were first to offer to sell them to the owners of the ground from which the lands were originally severed, the price being, in case of dispute, settled by arbitration.

It was not to be lawful to use any locomotive engine propelled by steam, along the streets or roadways. Nevertheless, an Act for the construction of an underground railway in the Embankment now seems likely to be obtained.

No building was to be erected in front of the ground of the Temple, other than porters' lodges; and, there, the ground reclaimed was to be vested in the Societies of the Temple: a private landing-place was to be constructed by the Board; but other compensation was not to be claimed.

Land belonging to the Duke of Northumberland, other than that required for the streets in continuation of Whitehall-place and Northumberland-street respectively, was not to be taken without consent; and no building, except with consent, was to be erected upon the lands taken, or on those coloured green upon a signed and deposited plan, except for the requisite fences, or for fountains or covered resting-places, or public monuments,—none of which erections were to exceed in height the level of 19 ft. above Trinity High-water Mark. The general width of the streets just referred to, and of one to be formed in continuation of Craven-street, was to be 60 ft. The street between Whitehall-place and Wellington-street was to pass under the northernmost opening of the Charing-cross Railway Bridge, that is, on the south side of the north abutment. Certain land was not to be taken from the railway company without consent. No landing-place, other than one substituted for the present Adelphi Pier, at the site now occupied by it, was to be constructed within 150 yards on either side of the present pier belonging to the Railway Company.

Opposite the Norfolk estate, the north side of the approach-road, and the approaches therefrom to Surrey-street, Norfolk-street, and Arundel-street, were to be constructed as shown on a deposited plan; no powers of compulsory purchase were to be exercised, except so far as might be necessary for the construction of the approach-road and approaches; no buildings were to be placed on the reclaimed land, between Somerset House and the Middle Temple, southward, except the works connected with the Embankment; the land between the southern boundary of the estate and the approach-road, was to become the property of the Duke of Norfolk, who was to have power to build up to the north side of the approach-road, and on both sides of the approaches to Surrey-street, Norfolk-street, and Arundel-street, compensation being paid to and by the Duke, and the Board, respectively.

As to the Adelphi estate, no part was to be taken by compulsion, except what might be required for the street between Whitehall-place and Wellington-street: the land reclaimed, and between this estate and the street, was to be subject to like restrictions as to buildings, as those in the Act of George III. which allowed of the embankment opposite Durham-yard, Salisbury-street, Cecil-street, and Beaufort-buildings; and this land was to be vested in the owner of the estate, after payment of any balance which would have to be paid by the decision of an arbitration subsequently referred to in the Act, the amount to be paid by the Board being also settled by arbitration; and as before, no building was to be erected between the land vested in the owner, and the river, other than works of the Embankment or roads, and landing-stairs, fountains, resting-places, and monuments. As regards the land opposite the Salisbury estate, no building was to be erected without the assent of the Marquis, with similar exceptions to those of the Marquis, with similar exceptions to those in the last-named case: the Marquis and his tenants in Cecil-street and Salisbury-street were to have means of access provided for them, to the ground reclaimed; and no roadway to Salisbury-street was to be constructed without the Marquis's assent, and if constructed was not to be open without consent, except for foot-passengers.

As to the Crown lands, certain works of filling up, levelling, and fencing, were to be done, as well as in the case of the ground opposite Somerset House and the Board of Control. All the land reclaimed was to remain vested and annexed, as the present ground, excepting that the lessees might within five years of the passing of the Act, take leases of the reclaimed ground from the Commissioners of Woods; no building being allowed to be erected on the Embankment, without consent by the Commissioners of Woods, in one case, and the First Commissioner of Works in another, other than a parapet-wall or railing, not exceeding 4 ft. in height; and the new ground taken by the lessees, being valued as garden ground. New landing-places were to be provided in place of those removed. Also, the Crown, or Commissioners of Woods, might at any time hereafter, require the Board to construct at the expense of the Commissioners, vaults or cellars, extending 12 ft. under a road or street connected with the Crown lands.

As regards the viaduct in front of the premises of the gas company, it was to be carried upon two arches, each having a span of 70 ft., and a headway of not less that 8 ft. above Trinity high-water mark; and there was to be one arch in front of Whitefriars Dock, of similar dimensions. The entire arrangement of the line between the Temple and Blackfriars Bridge, however, now, will undergo modification, the company for the construction of a railway in the Embankment having been more successful than the Metropolitan Board, in removing the difficulty of the gas works. There is much trouble in planning the routes and gradients of the many lines of road, railway, sub-way, and sewer, which will meet and intersect at Blackfriars Bridge; but the viaduct above referred to, and the construction in connexion with it, of a roadway on iron columns, spoken of, after the passing of the Act, by Mr. Bazalgette, will probably no longer be persevered in.

In the debate of the 3rd of July, 1862, Lord Palmerston referring to the question of the carriage-way past the ground of the Crown lessees, observed that the opponents of the Government "only said that the lessees of the Crown were to have this addition to the gardens they occupied; and that they were ready to furnish the money to make the Embankment. But if so, they might go along the whole river, and allow each proprietor to buy up that portion of the Embankment which ran before his own house." Yet defeating the manœuvres in one place, and preserving the full use of the road, Government and Parliament allow not only the Crown lessees to obtain reclaimed ground, but have given certain parties power to prohibit the erection of buildings on similar ground, and to control the traffic of certain streets of access to the Embankment. The Metropolitan Board is not able to build on such reclaimed ground: the ground is appropriated to the owners in the position of those referred to. Of the recreation-ground there will be about 13 acres, truly a gain to London. But considering the want of sites for many important buildings, as the projected law-courts, for which the Embankment would be more suitable than the Strand and Carey-street, we are not disposed to give unqualified approbation to the measure of the Legislature.

The day after the Act of 1862 had received the Royal assent, the Metropolitan Board appointed a committee to carry the measure into effect; and on the 22nd of October, a report by Mr. Bazalgette appeared. In this report, there comes to light a defect of the Act, which was alluded to in our last article. The clear water-way of the Thames is 900 ft. wide above Blackfriars Bridge, and 900 ft. at Westminster Bridge; whilst it is 1,120 ft. at Waterloo Bridge, and 1,020 ft. at Hungerford Bridge. In passing through Southwark and London Bridges,—at the former of which, the water-way, according to Mr. Bazalgette, is 660 ft., and at the latter is 700 ft.,—the tidal-water flows with sufficient velocity to keep the channel there free from deposit. But where the channel spreads to nearly double the width, as at Waterloo Bridge, a partial and contracted channel is formed in the north bend of the river, whilst there is much deposit on the south side. The embankment-line now is to take in the first arch and pier of the bridge. Had it extended to the second pier from the Middlesex side, a more uniform section of river would have been the result; whilst eight acres additional of land would have been obtained. The limits of deviation allowed by the Act, however, do not extend so far as the second pier; and fresh powers would have to be sought, involving a year's delay, to get the legislation accordant with the circumstances and the requirements. Mr. Bazalgette says, the Board are not responsible for the defect; but the bungling which there must have been somewhere, is not likely to be satisfactory when looked into by the public.

The face of the Embankment as shown by the contract-drawings, which are before us, and by Mr. Bazalgette's description in the report mentioned, is to commence at the northern abutment of Westminster Bridge, in a line with the existing embankment of the Houses of Parliament, and is to extend in a slightly curved line to the northern brick pier of Hungerford Bridge, and thence onward. The general direction is already marked out; but it should be recollected that the iron caissons are only appliances of the construction, and will be removed, except where below the bed of the river, to expose the facing of granite of the actual wall which will be built behind them in short lengths of coffer-dam. At Richmond-terrace, the face of the Embankment will be 220 ft. in front of the present high-water line: at Scotland-yard, it will be 400 ft., and at Hungerford Bridge, 300 ft. Opposite Buckingham-street, the Embankment will extend 450 ft. into the river; opposite Salisbury-street, 300 ft.; opposite Somerset House, 130 ft.; and opposite the eastern side of the Temple, 200 ft. The general level of the Embankment-road will be 4 ft. above Trinity High-water Mark, or 22 ft. 6 in. above the low water-line as marked on the drawings. The roadway will be joined with that of Westminster Bridge by an incline of 1 in 80, and the footway by a broad flight of steps; and the Embankment will pass under Hungerford and Waterloo bridges as will have been understood.

The present differences of level will necessitate careful planning. The roads connecting the Embankment with existing streets, would include, besides the approach-road to streets of the Norfolk estate, the new street from Wellington-street passing through the Savoy, and falling at an inclination of 1 in 40, under Hungerford Bridge, to near Northumberland Wharf, and joined with Whitehall-place by a prolongation of the latter, and having branch streets, in continuation of Cecil-street at an inclination of 1 in 50, of Salisbury-street at 1 in 63, George-street 1 in 125, Buckingham-street 1 in 127, and Villiers-street 1 in 60, and the street opposite the Horse Guards, from Whitehall to the Embankment, nearly on a level. But several of the existing streets at right angles to the Strand would be very inconvenient as thoroughfares. Norfolk-street, 40 feet wide, and the best of them, would have an inclination of 1 in 25. Mr. Bazalgette has also shown that provision had not been made for a direct line of communication between the Embankment and Charing-cross,—though such a line would probably tend to relieve the Strand and Fleet-street more than any other,—and that, should a line through the gardens of Northumberland House be deemed too costly, a route might be obtained by purchasing the houses between Northumberland-street and Craven-street, and passing in a curved line from the east corner of Northumberland House. That route from Charing-cross to the east of London, he says, would be 400 ft. nearer than by Whitehall-place, and 100 ft. nearer than along the Strand and down Norfolk-street, whilst the gradient would be more favourable than in either of the other cases. A better proposition however would seem to be that of a street prolonging the line of Duncannon-street and that in front of the National Gallery, from the north end of Villiers-street next the Railway-station, across Off-alley, Duke-street, Buckingham-street, and George-street, and crossing the other road opposite the Adelphi, to the end of Waterloo Bridge at the site of the intended steam-boat pier. In the report to which we

have alluded, Mr. Bazalgette submitted that the street from Wellington-street should commence in the Strand at the junction of Wellington-street, instead of as originally proposed, opposite the end of Somerset House.

During the autumn of the same year, 1862, when the reports appeared on the embankment of the south side, other parts of the comprehensive undertaking, with the street improvements, were under consideration; but we defer full particulars till the drawings now in preparation come before us. We may mention, however, that in November of 1862, the Board gave notice of intended application to Parliament for power to construct not only a street towards the Mansion House, but a continuation of the Embankment in the direction of Southwark-bridge, as far as Queenhithe, and a second street thence to the Mansion House. And in February of the following year, the members of the Commission of 1861, with Mr. Tite added, were appointed to consider plans for these several objects, and also for uniting the Embankment at Westminster Bridge with the existing embankment at Millbank. But they reported, as had the Commissioners in 1861, against the line to Queenhithe, on account of the probable heavy claims for compensation. After considering a proposed line to St. Paul's-churchyard, they concluded in favour of the line originally recommended by the Commission of 1861. They were against any enlargement of the present embankment in front of the Houses of Parliament, and in favour of considerable improvements about the Victoria Tower, as well as of the widening of King-street. Soon afterwards, an Act for the street to the Mansion House was passed; and a Bill for a portion of the Southern Embankment above Westminster Bridge was brought in.

There were points in connexion with the scheme of the new street which caused considerable difficulty and difference of opinion. The Commissioners had recommended a line in which there would have been gradients of 1 in 30, and one which would have had the effect, as it was said, of excluding the wharfingers from an approach to their own premises.

In April, 1863, the drawings for the Embankment of the north side were ready, and Mr. Bazalgette reported upon them to the Metropolitan Board. The total length upon which a commencement was then to be made was 5,710 ft., exclusive of the spaces occupied by the piers of Hungerford Bridge and Waterloo Bridge. This length was made up of 3,740 ft. of the first contract, undertaken towards the end of last year, by Mr. Furness, for 520,000*l.*, and extending from Westminster Bridge to Waterloo Bridge, and for a short distance eastward; and of 1,970 ft. of the second contract, about the commencement of the present year, undertaken by Messrs. Ritson & Co. for 229,000*l.*, and extending from the termination of the first contract to the eastern end of the Inner Temple Gardens. The two contracts include, besides the general line of embankment, sewer, and subway, steamboat-piers at Westminster, Hungerford, and Waterloo Bridges, and landing-stairs opposite Whitehall Gardens, Salisbury-street, and Essex-street, besides works for upholding the pier of Waterloo Bridge, and numerous short lengths of intercepting sewer, and arrangements of wiers and penstocks to old sewer-mouths, retained as storm-water outfalls. At Westminster Bridge, the arrangement consists of a single recess for the dumby, or floating portion of the pier; but at the other two bridges, there are two of these recesses and dumbies, or one above the bridge and the other below. The landing-stairs opposite Whitehall Gardens will include as the chief feature, York Gate, at present at the end of Buckingham-street, but with the addition of steps right and left to a landing, and an arch and substructure of rusticated masonry, in place of the broad platform and steps in front, of the original design.

The construction of each of these piers and landing-stages includes some of those elaborate contrivances in connexion with the sewerage, to which we have already alluded, and may further describe. And in the case of Waterloo Bridge, further contrivance, just now adverted to, was needed from the fact that the level of the bottom of the footings of the Embankment-wall was about the same as the bottom of the footings of the bridge, so that the excavation for the concrete of the wall would be even below the footings of the bridge. To describe the manner in which the important protecting work to the bridge, that of the sewerage, and that of the contrivances for preventing deposit in the recesses, are proposed to be executed, would, however, demand more space than we can spare now. But, in this number, we give a view of the steamboat-piers at Waterloo Bridge.* It will explain what will be one of the features of the finished Embankment; though it shows, even as to the single point in the line from Westminster to Whitefriars, nothing of the contrivance and construction in which great engineering skill has been brought to the preparation of the drawings and specifications of the two contracts, and to the devising means of executing the work by the contractors.

THE POETRY AND VARIETY OF ENGLISH MASONRY.

MANY a summer's day may be pleasantly and profitably spent in reading the stories told by ancient stonework. Fashioned by different races in distant centuries, there are vast gradations of feeling expressed in masonry. As in music, as in architectural ornament, as in art of all kinds, there is an indisputable stamp, or style, that marks the work of different ages in the same country: in the work of different nations the points of divergence are still more easily distinguishable.

Can you see upon the Kentish coast, about a mile from red-roofed Sandwich, a mass of ruddy walling standing up amidst the corn? That is a fragment of Richborough Castle, all that remains of the most frequented haven and port in all Britain in the days of the Roman occupation, *Portus Rutupensis*. Of the sea frontage of noble edifices, the temples, baths, schools, wharfs, arsenal, magazine, and amphitheatre, there is but one monument, this fragment of walling. The river Stour, then wide and deep, has shrunk up into a stream, and the sea has receded and left dry and bare the bottom of the bay upon which the Roman navy floated. But still, guided by this grass-tufted fragment of ruddy masonry, one may say it was here that Vespasian came; it was here that Claudius Contentus and Flavius Sanctius, both prefects of Britain, were buried; it was at the foot of this hill that Hengist and Horsa landed with their forces; it was here, more than 500 years afterwards, that King Sweyn came and burnt and slew all before him; it was here, too, that a tonsured monk landed, carrying, we may be sure, the sign in his hand that was to endure in the land for evermore—the cross. St. Augustine must have looked upon that ruddy walling with a wistful gaze after his sea voyage, for the Saxon kings had made the old fortress into a palace, and the holy father was to find King Ethelbert his most influential convert. And now the crowd upon the landing-place is gone, the bronzed warriors on guard are gone, the streets are silent, the buildings are overthrown, for the mighty sea rose and left a barrier of silt it never more overflowed. Some workmen digging to lay the foundation of a sluice, some time back, came upon the old seashore, strewn with shells and seaweeds, just as Italian workmen at Pompeii, digging into the lava, came upon the old, old surface of that city. Besides the shells and seaweed on this strip of shore there lay a small shoe, with a fibula in it, lost there or thrown there hundreds and hundreds of years ago. Corn ripens upon the site of this busy port; poppies flaunt where men wrought and lived; blue-winged moths are fluttering in the air; the peewit and corncrake make monotonous music where crowds chaffered and people came and went, and ships were made fast, laden and unladen; and the plough turns up countless coins and mementos of the traffic. Breasting the corn as a giant might breast the ripples of a lakelet, stands this fragment of the fabric raised by the Roman warriors after they had subdued Arviragus, the gallant British prince who endeavoured to prevent them from landing. The bronzed war-smiths, how they must have toiled! Six acres and more of land they marked out in the form of a parallelogram, on a declivity facing the sea, and set to work. We may see they raised the walls, 11 ft. thick and 23 ft. high, good measure. At the angles they built round projecting towers, and between these they threw out others that were square. The latter were solid for the first 8 ft. above the ground, and then hollow. How the bronzed battle-smiths must have toiled, and stooped, and lifted, and stretched, and climbed. Consider the labour of building a wall 11 ft. thick and 23 ft. high, to enclose an area of nearly 6 acres, when the gates were barred, in a strange land, and surrounded by hostile people. We may see how they went to work,—how they used the materials of the district as far as they would go, or were procurable. The ashlar they formed of squared grit and Portland stone: they backed this up with rows and rows of boulders, or large flint pebbles, over which they strewed as they went on a layer of smaller pebbles, fragments of flint and brick, and blocks of chalk, which fell into the interstices between the larger boulders; and all this was grouted together at various stages with a cement, a large ingredient in which was the refuse of their tiles. When the wall had advanced 5 ft. in height, they laid a double row of large flat tiles upon it to bond it together. Upon this they raised seven more courses of the squared work, then placed another double row of the thick red tiles, and so carried the work up to its full height with double rows of tiles inserted at intervals of from 3 ft. to 4 ft. Thus was formed this fragment of Roman masonry. It would have taken the bravest of Britons to have scaled that wall while the work was neat and trim. But now you may catch at any of the tufts of scorching grass that are protruding from the clefts, and climb up to the top unchallenged. You will see the cornfields spangled with poppies, and, beyond the marshland with its fluttering veil of blue-winged moths, the dazzling channel looking as like the road to fortune as it did to Julius Cæsar, Vespasian, Hengist and Horsa, King Sweyn, William the Norman, and other adventurers. If you look into the area, enclosed by the remains of the circumvallation, you will see a bare place in the midst of the standing crop, in the form of a huge cross, some 87 ft. long, that nothing will grow upon. Successive generations of antiquaries have examined this cross and probed it, and found that it is a compact mass of masonry, and that is all that they can make out of it. Whether it is the foundation of a Roman sea-mark, or of a Saxon memorial, to indicate the spot St. Augustine consecrated, or the platform upon which some other building was raised, may yet be ascertained. It is one of the curiosities of the castle-field that you will see as you shade your eyes and look round from your vantage ground, raised by the mighty war-smiths of Rome.

You may tell Norman from Roman masonry, without looking at a scrap of ornament, as you would have told the Roman from the Norman invasion, at a glance. The stones used by the Normans were but as handfuls compared to those used by the Romans; just as the men with which William made his venture were but as a handful compared to the Roman legions. The first Norman work was in reality Saxon work: so the antiquaries of the last century—Sir Walter Scott among the rest—were nearly right when they called Norman buildings Saxon; for the victors seized upon the vanquished, and made them build the strongholds that were to make the conquest permanent. We may note the economy of labour enforced by scarcity of hands by the diminished thickness of walling with the substitution of flat buttresses at intervals to give the necessary strength. The stones were reduced to a rough uniformity of size and squareness, or height and breadth, by no means considerable, suggesting, indeed, that the compulsory masons had no labourers, and that each could be lifted by one man. The rubble shows a certain hurry too, being but mere rubbish; not boulders gathered from the shore by a legion of gatherers, but mud, chips—anything that was at hand; the whole being bonded together, so to speak, with sighs and regrets that time eventually hardened into indifference, and thence into content. There is plenty of this Norman work wrought by Saxon workers in the land; plenty in Kent, not far from the Roman legacy, at Dover, for instance; and here and there fragments in every county, even to the northern extreme of the island, where there are several examples within the jurisdiction of the see of Durham. Cold and hard it looks in its regularity as though men had clenched their fists and ground their teeth as they built it up.

There appears to be in the enriched Norman work that followed this a lavishment of secret, and even open, exultation, as though the workers were happy,—as though the generation or so of masons were content and charmed with their task,—as though, as it was in truth, a calm had succeeded a storm. Out of this storm arose the exaltation that produced the best of workmanship, that of the Early English period. The same intensity of devotion that produced the

* See p. 565.

reater number of our cathedrals at this time sured that every stone should be wrought and id to the honour and advancement of the work. very mason seems to have regarded the fabric, its entirety, as a re-edification of the temple athens had overthrown; and each particular one upon which he was employed, one after e, as so many offerings to be laid before the tar. Thus the masonry of this Plantagenet iriod may be read as an expression of a devo- m that felt labour was prayer and praise. The ansitional period that ushered in this perfec- m of workmanship partakes to a great extent this disencumbrance of the mind from remu- rative considerations, as represented in the e of attractive ornaments to the neglect of is showy details.

Come a few miles out of your way, and look the gateway of a border town not very far uth of the Tweed. First look at the tint there pon it, as deep, sombre, threatening, as that a thunder-cloud; so imminently threatening, deed, that as you gaze, you would not be sur- ised to hear a peal burst from it. Then look the stones. Huge blocks they are, with the intings deeply recessed, leaving the edges anding out in rough lines of light. The ins of four hundred summers, and the frosts four hundred winters, have smoothed and orn away everything in the likeness of an lgie, and the mass remains a silent, solemn, gged remembrance.

"And dark and true and tender is the North,"

u will think. There is no ivy, no blade of ass, nor a leaf of any kind in sight. The teway pointed out spans a thoroughfare that the entrance to a town. A hay-cart, piled up th hay, has just tried to pass through the chway, and failed. The carter is busy taking r the topmost bundles of his fragrant load to duce its height, and the approach is littered th scented shreds. Looking through the sha- wy archway you will see a broad street of stone uses of irregular heights (with a shop or two nong them, to add to their irregularity), that idens as it leaves the gateway, till it divides to two roads, and leaves a triangular group of uses standing in the midst at the point of verance; and, if you stand a little to the ght, you will see that one of these roads ens into a market-place. You would never ess that the other road, narrowed to a mere ck just there, was a portion of the great rth road between London and Edinburgh. t princes have passed that way full many a ne. It leads to the barbican of Alnwick stle, and away hundreds of miles past it into e dark and true and tender north. This storm- ound of a gateway was built by the son of otspur. Eleven years after the death of that llant knight his son was restored to the mily honours by the successor of the offended narch; and, in good time, the young Percy, th all his father's energy of character, began build on his vast possessions in this massive anner. Over the gateway, in a recessed panel, sculptured the Percy lion,—placed there, it uld seem, as men place their seals to docu- ents, to say "this is my act and deed." Over e lion protrudes three corbels, to hold some tra defence should temporary need require it; d the wings of the gateway are thrown for- ard in the form of three sides of an octagon, to ve additional protection to the passage through e centre. The stout town wall left the gate- ay on either side composed of masonry as assive, as profuse: no stint here, of either orkers or material. The Scots were, of course, e common enemy all this was supposed to fy; but it is impossible not to think that the eat fight near Shrewsbury, the quartering and spersion of Hotspur's remains, the subsequent enation of his inheritance, find some expres- on in it,—some precautionary expression that e chances of any further civil war should have different ending. But, one-and-twenty years ter leave to embattle the town had been ob- ined, this knight was lying with his face turned to the sky, cold and stiff, upon the battle- ld of St. Alban's. The moaning of the wind it sweeps through the darkened archway ings to mind the sound of muffled drums, the eat stones seem so many sighs, the great inter- ces so many shudders as we think of this.

Very different from this grave and sad kind masonry, reared within a ride of Chevy Chase, that the fifteenth and sixteenth century men ought. There are no such ledges to catch n and snow and cast shadows: no such stern istance, sullen reliance implied in it. The stones are neater, smaller, arranged with a flatter surface; the interstices mere chinks. Somehow this masonry appears to have absorbed all the sunshine that has ever fallen upon it. It appears to be mellow; almost melliferous, if one might say so. If it be less like the temper that dictated chivalrous exploits it is more like the sweetness that devised "Arcadia," the "Faëry Queen," and a "Midsummer's Night's Dream." Kenilworth Castle comes, a-glow with noon-day heat, to view. Haddon Hall, on the Wye, too, amidst a crowd of other examples, comes, pictorially, to mind as a specimen that half a dozen generations of artists have made familiar to many. Wandering about the untenanted hall, who does not feel as some wight of old arriving at an enchanted castle, and move on and on, through the courts, chambers, hall, and gallery, expecting at every step to be met by something not of this world; expecting in every oriel to come upon a group belonging to other days? The footsteps of Sir Philip Sydney, Spencer, or Shakspeare might have been the last that trod the glorious terrace so mysteriously deserted and yet so mysteriously kept in an elvish kind of order.

There is a later Tudor masonry that is not so poetical. It is stiffer in manner, less ripe in appearance, laid more by rule: as though a knowledge of machine-executed labour was dawning in men's minds, and they aimed at rivalling any such process applied to stonework. Some of this effect is doubtless due to the comparative newness of the ashlar; but more to a sentiment of progress which at that age had begun to show itself in the study of antiquities as curiosities, and in the reproduction of Roman and Norman forms in ornamentation as proofs of scholastic elegance. We are thinking of the workmanship of which Burleigh House is a stately type. Of much angularity and of a cold grey colour, these stones might have been wrought in our own prosaic age. All that this seat gains in effect from the leafage of its grand park and glitter of its gilded vanes and variety of its enrichment is wanted to realize that it is an Elizabethan *chef d'œuvre*.

Turning seawards, could we suggest a material more declaratory of our insular position than the flint and freestone mural surfaces of our eastern coast, or a more masterly manner of using it than that adopted by the builders of Early Norfolk and Suffolk churches on the coast, or of those in the lime districts in Kent? It is, however, most appreciable in those venerable and sunbleached edifices that assume a twofold character, and serve as landmarks to those that go down to the sea in ships. A score of white fishing villages, with fluted red roofs and glossy-black doors and palings, redolent of tar, rise before the eye like a vision out of the sea, at the mention of them. A redolence of seaweed, drying nets, seasoning timber and dried fish, accompanies the remembrance of unconsidered trifles, ropes, cables, oars, blocks and pulleys, and other fishing gear that form part of every seaside scene: the crunch of footsteps on the beach, snatches of sailors' songs, and fragments of the long, long story the wind is telling to the idle waves fall upon the ear. For 600 years men have gathered flints, broken them, bedded them in mortar, with the broken faces placed to form a sheeny surface, after the same fashion, with as little change in the mode of conducting the operation as the sea-terns have made in scooping out their nests in the sand. The artistic portions of the fabrics show stages of progress, but the matter-of-fact process of building appears to have been instinctively grasped.

If we leave England, we may see as much feeling and variety in masonry: certainly not more. No echo of a "wild Irish" chant could be more weird or moving than those hoary, mysterious, cone-topped Irish towers: no "second sight" reversed and directed to primeval times, when a few tribes wandered over the land with reindeer, could be more quick with strange undreamt-of life than the "sorcery halls" with their Runic writings in the North of Scotland. Could a Welsh harper fire the blood in one's veins by any recountal more than an eye-feast upon the grand Cambrian castles of Harlech, Carnarvon, and Conway will do? They must have been brave men to have called for so much castle-building at the hands of Edward; and all honour to the brave. On the Continent, in the cities that now occupy the sites of the vast old-world forests, there has been the same power of expressing thought and circumstances in stone.

Here is one foreign example. About fifty miles from Baden-Baden there is a town of some 10,000 inhabitants, whose principal trade is that of polishing crystals and precious stones. It is seated on a plain surrounded by distant hills. You will know it by its rows of poplar-trees, its step-gabled houses, its convents and university; but more by the exquisite spire that rises above all these things. You will own, at once, that a mind familiar with other minds in daily contact with the refinement and refining of precious stones is the only one likely to have conceived the idea of lavishing so much love and labour on such an object,—of treating red sandstone with the utmost witchery, and capping a tower nearly 240 ft. high with a spire rivalling in its open-work tracery the effect of rich point lace. This Freyberg spire is exactly 155 ft. high. It rises from an octagonal stage, having triangular spirelets at the angles, which, in its turn, has for a still lower stage the plain and simple square base containing the porch. The interior of this church does not yield anything so captivating to the imagination. There is no trifo- rium; but, as we remember Freyberg, this omis- sion was scarcely noticeable, for the walls were hung with black cloth; not a step was stir- ring; and, resting on trestles in the centre ambulatory, in the solemn silence and solitude, lay a coffin. But, perhaps, of all the poetry to be read in masonry, the most sublime in the world is that in the huge bevelled blocks in the Wailing-place of the Jews in Jerusalem, where the stones are worn away with the lamen- tations of the Israelites.

FORMATIVE ETHICS, OR THE MORAL SCIENCE OF RECTIFYING ABERRATION, AND OF DEVELOPING THE PERFECT AND BEAUTIFUL.

BEING dissatisfied some years ago with the capriciousness of modern criticism and the pre- valence of extreme differences of opinion, where there would be general consent if men had but a criterion of judgment and a definite purpose of thought and action, I resolved, if it were pos- sible, to obtain such a criterion and to enunciate such a purpose. In pursuing these objects, I have frequently had to reject the results of much intense but fruitless thought. In noticing the fundamentally quantitative nature of all *exact* science, however, I had discerned the clue which has since led to a distinct view of man's forma- tive purpose, viz., the Rectification of Nature by Mind and to the discovery of a criterion, calculus, or compass of judgment, which, once thoroughly understood, enables us to determine the measure of rectitude, and to definitely estimate departure from it in every species of phenomenon of the solar system.

It is a leading principle of Formative Ethics that all true art (using this word in its most comprehensive sense) has the rectification of nature as its ultimate object. From this enun- ciation of a leading principle of the science, an enunciation with which most thinkers will agree, it will appear that it does not aim to astonish by new doctrines, but to induce a more consistent mode of thought than gene- rally prevails. It has been stated, indeed, that no discoveries can be made in ethics; yet no allusion to the theory now propounded is to be found in any modern work I am acquainted with, although it is distinctly enunciated in the sacred Scriptures. The science of Formative Ethics having been worked out independently of other moral systems, gives a command over the subject which enables me to re-unite and grasp the scat- tered fragments of what I believe to be an ancient philosophy into one consistent whole. Fragments of familiar every-day wisdom, the leading fea- ture of the Aristotelian ethics, will be found re- united in Formative Ethics, which moreover coalesce and harmonise with Christianity, and have reference not only to human conduct and development, but to the government of the spheres, the whole of animated nature and art. An outline of the science of Formative Ethics will be traced under several heads before entering upon the quantitative analysis of phenomena, or drawing those inevitable conclusions consequent upon the consideration that all differences in phenomena have their corresponding quantita- tive or numerical expression, which it is the vocation of all science aspiring to the title of "*exact*," each in its special department, to determine and record.

1. The first great question which presents itself on the threshold of ethical inquiry is, are wrong, error, and imperfection, more than

nominal distinctions? If they be not, with or without ethical systems, nature can never be otherwise than as it ought. This question, however, it is assumed has been affirmatively determined, and that the words right and wrong stand for real distinctions in the nature of ideas and of things.

2. The mental conceptions of right and wrong include the ideas of a normal and abnormal state of nature, and of the possibility of gradually rectifying, converting, or developing the latter into the former. On this rectification of nature being possible, the utility of ethics, and the validity of the distinctions of right and wrong are logically dependent; for no wrong, error, or imperfection were possible, if all the differences in ideas and things were unalterably fixed.

3. Observation and experience confirm these *a priori* ethical conceptions. From experience and observation, we learn that nature is alterable, and capable of such rectification, or development; that the knowledge of rectitude is gradually becoming the guide of human action; and that wisdom has not only the power to rectify the inner world of human ideas, but also the outer world of visible and tangible forms.

4. The nature of things is comformable to the perfection or imperfection of ideas. The rectification of organization and form is a re-creating, re-making, and remodelling of the real to the pattern of the ideal. And as all right or perfect are also moral ideas, the real so rectified is said by Formative Ethics to exist in its moral form. The sensuously good, beautiful, and perfect are the realizations of the ideally good, beautiful, and perfect by rectitude of action.

5. As the establishment and appreciation of a science of ethics of a theory of rectitude, by which this re-creation, re-formation, re-modelling, or transmutation of nature is being directed, is due to right-mindedness, the great work in progress has been designated the Rectification of Nature by Mind, and the theory by which it is guided—Formative Ethics.

6. By a slight alteration of expression the rectification of nature by mind becomes that of the rectification of nature by right, or moral ideas and action, which coalesces with the Scripture doctrine, "the Rectification of Nature by the Spirit of Truth."

7. A complete science of ethics would propound the theory of rectitude or the ideal conception of every species of phenomenon; that is to say, it would propound the moral theory of the universe,—that best constitution of it, in which every species of phenomenon, whether of ideas or of things, would have its full, complete, or perfect existence.

8. But, as it will presently be demonstrated that the fundamental form of all exact mental conception is quantitative, a complete science of ethics would also demonstrate the numerical expression or measure of rectitude in every species of phenomenon.

9. All exact knowledge, therefore, might be recorded under the comprehensive title of orthometry (right measurement); and that special department having reference to *exact* moral science might be specified as quantitative ethics. The quantitative expression of rectitude has the sanction of Holy Writ.

10. According to the scientific conception of ethics, then, the Quantitative Rectification of Nature is the great work to be accomplished by moral ideas and action. The rectification of the understanding of human ideas must precede the rectification of imperfect action and forms. The right conception of the best condition of every species of phenomenon has to be acquired before the imperfections of species can be corrected. The inward and invisible ideal conceptions of things will then be gradually realised in nature; right ideas gradually find embodiment in outward and visible realities. This is also, as before affirmed, the teaching of Christianity; but Christianity breathes faith, hope, and life into what would otherwise be a cold, spiritless scientific formula.

11. The words "ideal," "right," "moral," "good," "beautiful," "normal," and "perfect," are considered to be equivalent or correllate expressions, as also are their contraries, "accidental," "wrong," "immoral," "bad," "ungainly," "abnormal," and "imperfect."

What ought to be the sole inquiry with every man who takes to himself, or deserves from others, the designation of philosopher? Should not the exclusive question be, and should not the answer to it be sought with equal simplicity and earnestness of purpose,—What is truth? What other object can there be of aught that is entitled to be called philosophy, but the discovery of truth? Of what conceivable use or value are all the investigations and reasonings of philosophy, if not for ascertaining truth? Such are the ever-recurring questions. Who, however, having given them serious thought, has not felt their vagueness, found the thread of his inquiry soon entangled, and given up, for a time at least, all hope of satisfactorily solving the question, "What is truth?" But, if the equivalent, though more explicit word for the kind of truth implied in this question, had been substituted, they would have gained perspicuity; for the question of paramount importance to mankind is not, What is truth? but, What is right?—in thought, in act, and in being? Truths are as multitudinous as facts, and are of two kinds; but there is only one right or best condition in every species of phenomena, and this is the kind of truth, beyond all other, which philosophy has to determine; for, although everything in nature, *per se*, is a fact,—*is* a truth, it does not follow that it is also right. To eliminate every possible form of aberration from the conception of any species of phenomena, and to rectify and reform according to the residual ideal, is the doctrine consonant with divine teaching and of Formative Ethics.

There often arises a confusion of ideas, too. When it is asked, "What, in the name of common sense, has a man to do, but to act and work in conformity to nature?" For the word "nature," like that of "truth," has two significations, the one implying only that which is *right*, the other all that is possible in thought, act, and being; so that the limited meaning of *that which is right* gets transferred to it when used in its widest sense of *all that is possible*, and nature frequently discoursed upon as if it were immaculate. If nature were immaculate, unerring, there would be no moral law: it is the aberration of nature from rectitude which renders a remedial moral science necessary. It is the rectification of nature which all ethical systems have more or less in view; but it is Christianity only which grasps this idea in its totality, in teaching the gradual subjugation of the spirit of error, and the final restoration of all things in rectitude. The full import of this great doctrine in its material application has not hitherto been discerned, much less understood.

There is a perfect agreement between experience and revelation in this, that nature is capable of being perverted from, or converted to its best conditions. All means, therefore, whether improving or debasing, are natural means,—means which either mend or mar, but still within the compass of Nature's powers. The following quotation from Shakspeare is to the point:—

> *Perdita.*—I have heard it said
> There is an art, which, in their piedness, shares
> With great creating nature.
> *Polixenes.*— Say there be,
> Yet nature is made better by no mean,
> But nature makes that mean: so that the art,
> Which, you say, adds to nature, is an art
> That nature makes . . . . We marry
> A gentler scion to the wildest stock,
> And make conceive a bark of baser kind
> By bud of nobler race. This is an art
> Which does mend nature,—change it rather; but
> The art itself is nature.

This power over means to change nature and dominate it to our will is a mental power conferred by knowledge. The material world is conformed or moulded by man to his mentally right or erroneous conceptions by his good or ill will. All causation, according to the Christian doctrine, is either moral or immoral. All imperfection and deformity proceeding from the spirit of error, all goodness, beauty, and perfection from the Spirit of Truth. All outward perfection and imperfection indicate the moral and immoral sources from which they spring. The moral and immoral powers produce corresponding effects,—that is to say, outward moral and immoral conditions and forms. Whether right or wrong in its conceptions, it is the inevitable tendency of mind to dominate and subdue other nature to its own: if right in its apprehension it preserves and re-forms, if wrong it deforms or destroys.

It may be legitimately inferred that the wisdom of man differs in degrees, and not in kind, from His who made him pre-eminent in, and gave him dominion over, the earth; and that as he partakes of or more and more advances towards that measure of the divine nature to which he may attain, will he desire to restore all things to their best conditions; for he has been taught that the universe existed at the fiat of the Creator an embodiment of the divine ideas, perfect in all its phenomena. Imbued with these considerations, the doctrine of the Rectification of Nature by Mind is invested with a higher dignity and importance than any which its sciential and artistical utility confers; for it is discerned to be correlated with the great Christian doctrine which reveals that nature is to be finally reinstated in the perfections from which it has been gradually perverted by the spirit of error. The Christian doctrine of Restoration accurately defines the nature of true progress,—that progress in which inheres the breath of life, the progress which is irresistible. And in this Christian and scientific view the development of beauty and perfection, by moral ideas and action, is transferred from the narrow sphere of the canvas and marble to the plastic world of organic and inorganic being: this is art in its widest sense, the great Christian art which, proceeding from a "new spirit," mends and tempers nature, and with more than Phidian power corrects excesses and defects, proportions, remodels, and restores terrestrial nature to its Moral Form.

The pernicious and deforming influence of human error is not confined to man: it permeates all other nature under his dominion; so that this is also marred in its outward form and fabric. The world, with all things in it, retrogrades from or progresses towards its perfect state, as the soul either falls in ignorance and misused knowledge or soars upon the wings of faith and science. Body or substance is moulded by the rectitude or error of the mind;—the material by the spiritual. This is why Christianty promises as the result of inward renovation the outward development of human and other nature to their fulness of beauty and glory. Experience teaches us that the rectification of nature by mind, a material restoration, is possible; for from it we learn that nature, under the constant culture and compulsion of right reason, of rectitude of mind,—like the clay that was marred in the hands of the potter,—is made again as it seemeth good to the true workman to make it. Hence it is the duty of orderly and scientific minds to define the Moral Conditions and Moral Forms of nature; to point out the Christian art of educing them; and to proclaim that physical beauty and perfection are to be the outward and visible signs of the presence and imperial sway of the Spirit of Truth in the human mind.

If the Dorians had possessed the right comprehension of morals they would not have prayed, as it is recorded they did, for the beautiful to be associated with the good; for they would have then known that persistent goodness would inevitably produce its external evidence in beauty. A clearer perception of the relation of the beautiful to the good was evinced by him of old, who, when interrogated respecting the final purpose of philosophy, replied,—to make that which is inward,—*i. e.* ideal conceptions,—outward.

"What!" it will be said, "do you maintain and believe that human ungainliness and deformity are to be gradually but ultimately extirpated by moral ideas and persistent moral action? We know very well the extraordinary changes which have been produced in animals, plants, fruits and flowers by art; but human nature is a very different matter: we do not believe in its convertibility." It is, perhaps, a little more perverse and obstinate and therefore less ductile and plastic. Nevertheless, that is the doctrine of Formative Ethics, nay of the highest authority, even Christianity. Let it be borne in mind, however, that Formative Ethics do not maintain that ungainly and deformed humanity is to be at once transformed to beauty by right-mindedness and rectitude of action: imperfections of organization and form may be the effects of malcausation of ancient date, for which the bearer is not responsible; the gradual accumulation of years, it may be of centuries, of misdirected thought and action. Such physical decadence, then, is not to be rectified in the twinkling of an eye, but by gentle gradations, according to the unalterable laws of human growth and change. The human race must ascend towards perfect organization and form as gradually as it falls from it. The effects of rectitude of thought and action must accumulate through years, perhaps through generations, before the evidences of present or past malcausation can be completely erased, and humanity culminate in the full beauty of its Moral Form. Meanwhile those imbued with a right spirit,

nough they cannot be transformed by it at nce to this physical perfection, are irradiated ith that spiritual light which suns out the ark ungainly shadows of bodily imperfections, r beauty of some kind must be associated with oodness in the divine constitution of things. y goodness alone can beauty be preserved; by oodness alone can beauty be produced through it the wide domain of nature. This is the ctrine of Formative Ethics.

It is contrary to reason to suppose that ny function or power of being, rightly used, ould tend either to produce or increase malrganization or malformation; but that perfect rganization and form which corresponds with s moral use, that is to say, its Moral Organizaon and Form. Apply this reasoning not only to uman functions and powers, but to those of all her being, and we shall be able to grasp the lea of what persistent moral force will ultiately accomplish in the conformation of nature.

The Rectification of Nature by Mind is not a etaphysical idea, involving subtle disquisition a the natures of mind and matter, but a pracal view taken from the summit of experience, here recognising the power of mind, as that culty is commonly understood, to modify or ange forms and conditions, and the probable fects of that power in the vista of the future, alises in the mind's eye the glorious prospect a renewed world. Formative Ethics, therefore, eks to define the right conditions and forms of nenomena, to establish the right ideas to which ature should be conformed.

The perception that the progress of knowdge is giving man a continually increasing ower over nature to mould it to his will, and of e eternal and necessary quantitative predomiance of good over evil, leads us at once to ecognise the parallel which exists between the ientific prevision of a restored world and the storation proclaimed in the prophecies and by hristianity. Moral science has to define what right in thought, act, and being, in order that ll nature may be reinstated in rectitude. The ore one rightly and thoroughly knows, the earer becomes the anticipated correspondence etween the natural or scientific and the realed moral law. Christianity and Formative thics lead us to contemplate the human race nd the world as materials long since marred by norance or wilfulness, being re-made and conrmed as right ideas see fit to make them,—reored to rectitude.

Before proceeding to formulate the science a more detailed exposition of the hypothesis Quantitative Ethics, it is important that the llowing brief summary of the results of ages of hilosophical speculation should be grasped and nderstood. Philosophy, then, has decided and -decided in recurring cycles, that we can nly believe in or speculate upon, but never now, cause *per se;* that neither the existence of piritual nor physical noumena can absolutely be emonstrated. All thinking men, however, beeve that there are noumenal potentialities adequate to the production of, though hidden ehind the veil of, phenomena. To these nouenal potentialities various titles have been iven according to the moral or immoral tenency of the mind. In the one case, all effects e attributed to spiritual; in the other, to phyical causes. The hypothesis of a noumenal notion and substance being the causes of all hings is less probable than that of the spiritual, r the ground of its destructive social effects nd practical disadvantages. A belief in a reat First Cause, however, appears to be herent in the human mind, and thousands thoughtful lives have been spent in vainly ideavouring to penetrate the veil of ideas; e ever-recurring result being, that if phisophers are compelled to accept nominalism as conviction, they always adopt some form of alism as a belief. Bishop Berkeley wrote an refutable treatise, proving that the existence of a oumenal substance cannot be demonstrated: he light also have as irrefutably proved that the istence of a noumenal physical force or motive ause is undemonstrable; so that the idea of aysical causation, of materialism, which by me minds is thought to be so certain and posire, ultimately rests like that of the spiritual on elief. But in controverting and discarding this ea, he was compelled by a mental necessity to bstitute belief for belief, and to attribute all nenomena to a spiritual cause, *i.e.* the will of e Creator.

Both the metaphysician and the physicist, en, fail in attempting to define and demonrate the nature of causation; and the correct arrangement, classification, the right quantitative expression of ideas, and the correct observation and measurement of external phenomena are the more legitimate objects of science.

Let it be conceded, however, for a moment, and for the sake of argument, that the belief in physical causation is the right one; that all phenomena are so many various effects of a noumenal physical motion and substance; and the inevitable conclusion must be, that all phenomena are capable of quantitative expression, of being numbered or measured; that all exact science must be the knowledge of quantities, of definite proportional relations, for our ideas of force and substance are fundamentally those of degree and extension. The same inference, too, must be drawn from any metaphysical conception of cause, for metaphysicians have long since decided that our fundamentally intuitive ideas are those of space and time, which are really subject to still higher abstraction, and are ultimately, as in the physical idea, resolvable into quantity. Quantity, then, under either hypothesis, is the most abstract of comprehensible ideas: it is fortunately also the simplest, and forms under its symbolic expression of number and measure the surest basis of discussion.*

W. CAVE THOMAS.

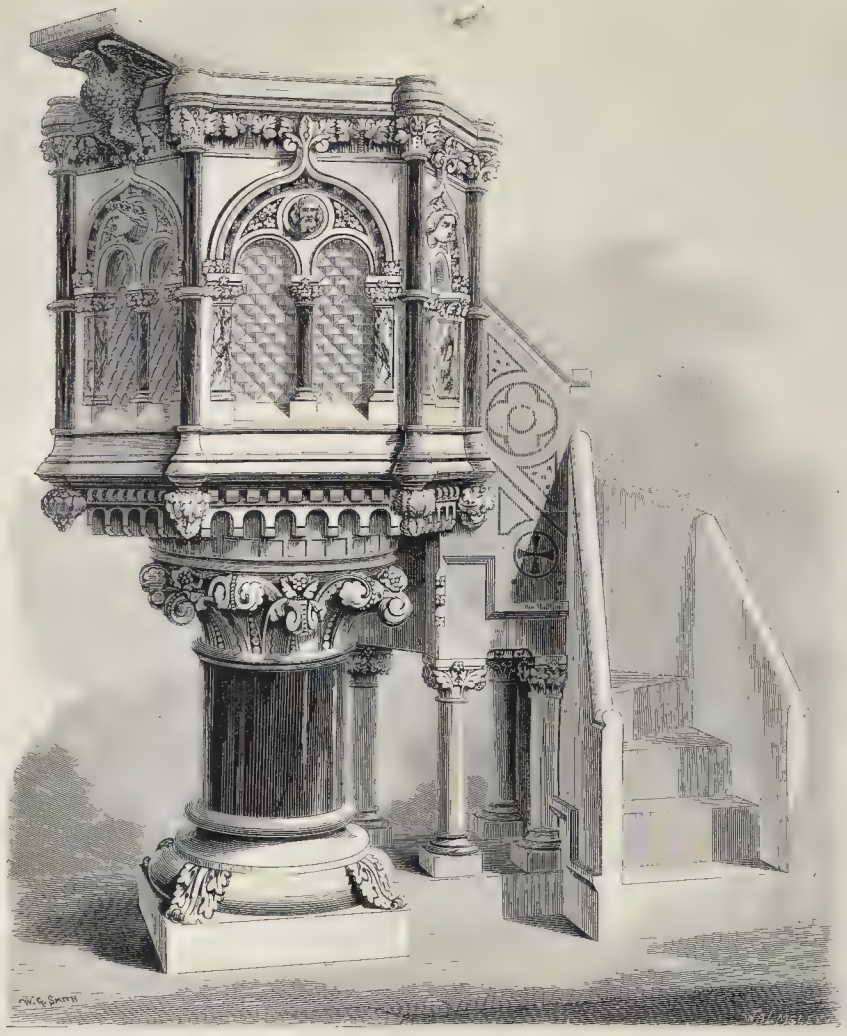
GERMAN HOSPITAL, DALSTON.

IT is estimated that there are upwards of 30,000 natives of Germany or of the German provinces subject to other states, resident in London and its neighbourhood, and contributing to the commercial, manufacturing, and professional activity and prosperity of the metropolis. Up to about twenty years since, many of the artisans and other humble classes of that nation, whenever they were ill and destitute of the most necessary comfort or medical aid, had to depend on parish assistance, finding themselves alone and deprived of the soothing attention of kindred and friends. Under such circumstances their wealthier fellow countrymen took steps to create an institution which should relieve such misery; and, seconded by the benevolent sympathy of the late king of Prussia, and of her Majesty Queen Victoria and the Prince Consort, they were enabled to open a hospital at Dalston on the 15th of October, 1845, in the presence of his Royal Highness Prince George of Cambridge and a numerous assembly of influential friends.

Three thousand pounds had been liberally advanced without interest, in equal shares by the late King of Prussia and two German merchants, for the purchase of the establishment at Dalston, originally occupied as the Infant Orphan Asylum. The committee secured the services of a matron and three nurses, from the institution at Kaiserwerth, near Düsseldorf, on the Rhine, in which institution, from religious principles, respectable Protestant females devote themselves to the task of nursing the sick, and are there trained as "sisters" or "deaconesses." The committee were soon joined by several English gentlemen zealous in the cause, and since that period above 150,000 sufferers have been relieved, whether as in or outpatients, of whom above one-third have been English; the average *daily* number of English outpatients amounting to about 100!

One valuable feature distinguishes this Institution: it has a sanitarium, or a part of the hospital where accommodation is afforded to German patients who are received on paying a moderate remuneration to the funds of the Institution,—a system which might with great advantage be more generally adopted than it is in the lunatic and other hospitals and infirmaries of this kingdom. The accommodation at the end of the first twenty years' probation proved inadequate to the increasing demands upon the resources, both from local and other claims upon the benevolence of the governors. The total number of cases relieved last year amounting to nearly 17,500, of whom 789 were in-patients and of them 141 English, these last arising from accidents, many of them heavy, expensive, and occupying the beds for a considerable time. A further appeal was made to the German committee and the benevolent English, who sympathised in their efforts, and the late Mr. F. Huth having made a munificent gift of 2,500*l.*, his example was generously followed, and steps taken to erect a new hospital; and Mr. Huth being requested to name the architect, he recommended Professor Donaldson, which was confirmed, and his plans for 100 beds adopted at a meeting held on the 16th of July of last year, presided over by his Royal Highness the Duke of Cambridge.

The building, of which we gave a view and plans in our last number,* stands in the centre of what was formerly the garden of the hospital, through which runs the North London railway. The soil is admirable in a sanitary point of view, consisting of gravel and sand to a great depth. The building consists of two blocks; the ward building, one of whose long fronts faces the south, and the north or residential building, containing the kitchen department, offices, medical and other officers' residences and "sanitarium rooms," for eight or ten patients. These two blocks are united by a corridor, which at the same time disconnects the wards from the residence of the officers. The wards have windows on both their long sides, to the north and south, affording a thorough ventilation, and are 15 ft. high in the clear, thus providing 1,500 cubic ft. for each bed. It will be perceived that each ward has at the end its scullery, containing ventilated water-closets, bath and other conveniences, and rooms for the nurse and sister. The ground-floor has the accident-ward for ten beds, with attached scullery and nurse's room, and to the out-patients waiting-room; these are capable of holding above 100 persons at once, besides an outer shed for the like purpose, near the entrance-gates. There are three consultation-rooms for the medical officers, a dispensary, laboratory, and lobby for out-patients in waiting, while the medicines are preparing. The chapel, 40 ft. by 25 ft., and 16 ft. high, with chancel, is at the east end, having over the communion-table a stained-glass window in memory of his Royal Highness the late Prince Consort, presented by Mr. J. Rahles, a member of the Board of Management, and the floor has an ornamental paving of Minton's tiles.



The staircase is 26 ft. by 13 ft., having flights of steps 5 ft. wide, with 12 in. treads and 6 in. risers, affording immediate and direct access to the wards, which on the first floor are divided into four, for ten beds each. These consist of the children and female wards on the one side, and the men's wards on the other; and of four sculleries, and two nurses' and one sister's rooms, 14 ft. by 10 ft. The second floor, or uppermost range, consists of two large wards, of twenty beds each, with two sculleries, and two nurses' and two sisters' rooms. In the attics are five rooms for male attendants or stores. There is a lift for raising coals, the dinners, or any other articles, from the basement to each floor, worked by Easton & Amos's hydraulic apparatus, and which, in case of need, is available for use by patients; and on each landing is a store closet. The basement has a bath-room, and vapour and sulphur bath-rooms, with capacious coal cellars. A corridor connects the ward-building on each floor with the northern or residential building, the basement of which is elevated to the kitchen and domestic departments, matron's stores, wash-house and laundry for the smaller articles, the chief bulk of the washing having to be done out of doors. The entrance-floor consists of the entrance-hall and staircase, committee, chaplain's, and secretary's rooms, matron's sitting-room, common or dining room for matron and sisters, medical men's common sitting and sleeping rooms, clerk's office, and a waiting-room on either side of the hall, the walls of which are to have enamelled slate slabs, inscribed with the names of benefactors. On the first floor are the operation-rooms and two surgical-cases rooms attached, sanitaria rooms for contributing patients, and bedrooms for the matron and sisters, with a storeroom for linen.

The building has been carried out by Professor Donaldson, with the co-operation of Mr. Edward A. Gruning as his colleague. Messrs. I'Anson are the contractors for the building; the cost of the structural part and some of the fittings amounting to about 12,500*l.*; the out-buildings of porter's lodge, dead-house, and post-mortem rooms, shed, and coach-house, 1,050*l.*; the cooking apparatus, by Riddell, 125*l.*; the heating apparatus of the wards, baths, and sculleries, by the London Heating and Ventilating Company, 244*l.* 6*s.*;† the lift, 180*l.*; gas-fittings, 176*l.* 10*s.*; and bells, 52*l.* 10*s.* Some few minor fittings have yet to be arranged for.

* To be continued.

* See p. 546, *ante*.

† The warming will be effected by means of the "Gurney" stoves (as used in St. Paul's and various other buildings), and open-fireplace fresh-air grates. These grates admit the external air over the back of the grate, and it thus becomes thoroughly warm before entering the ward.

PULPIT, CHRIST CHURCH, DEPTFORD.

Designed by Messrs. Newman & Billing: executed by Mr. Seale, Sculptor.

PULPIT, CHRIST CHURCH, DEPTFORD.

THE accompanying engraving represents the pulpit in Christ Church, Deptford, designed by Messrs. Newman & Billing, architects, and executed by Mr. J. W. Seale. The principal portion of the pulpit is Caen stone, with a polished Aberdeen granite shaft. The columns in the upper part are Devonshire and Irish red marbles. The book-stand and pilasters are of Derbyshire alabaster. The five medallions represent Christ and the Evangelists.

THE POOR OF THE METROPOLIS.

MORE deaths and more misery in Bethnal-green! Some inquiry is necessary. The changes which are taking place in the condition and arrangements of our population are surprising, and call for new measures which may meet the difficulties now constantly arising in consequence of these alterations. It is impossible, with justice to all classes of the community, to continue old-fashioned management. With all our changes, the poor shall not cease in the land; in fact, it is unfortunately the case that, notwithstanding the general prosperity, there is an amount of helpless destitution to be dealt with which it is frightful to think of.

One peculiarity of our present position is, that the increased growth of the towns, the gathering together of the people in certain situations, is causing the poverty to be concentrated into these particular quarters, where it is left without that voluntary aid, which, in more limited populations, affords the means of enabling persons to bridge over temporary difficulties. For this and several other pressing reasons an inquiry into the condition of the metropolitan poor is called for, which would enable us to see clearly how the matter stands. In the course of such an inquiry it would be needful to ascertain the effect which the removal of so many houses formerly inhabited by the poorer classes has really had in increasing the extent of overcrowding; the amount of rent, and other facts, which should be gathered on a more extensive scale than it is possible for private individuals to manage; and other circumstances connected with the dwellings which materially affect the life and health of a great multitude. It is also needful that the working of the present system of the Poor-laws should receive very careful attention; for what is especially wanted just now is a collection of facts, which can be put to use by able persons who are unbiassed in their opinions by routine, or by interested or other motives.

The inquiries which have been made by the Poor-law Commissioners at Bethnal Green will, to a certain extent, be productive of good, inasmuch as they will show the manner in which the evil works, and in a certain degree indicate

THAMES EMBANKMENT: LANDING PLACES, WATERLOO BRIDGE.—MR. BAZALGETTE, ENGINEER.

* See p. 563, *ante*.

the nature of the changes which should at once be made. It is hoped that the ill-feeling exhibited by the guardians here, not only to the pauper part of the population, but also to those who are living in situations where the proper duration of life depends on careful inspection and the enforcement of sanitary laws, will give way to a wiser policy.

The matter is one beset with difficulty; for instance, the great size of the metropolitan unions and parishes, and the proportionate extent of the accommodation which is required in the workhouses, some of which have a population as large as that of many well-known country towns, have to be considered. In the infirmary alone of Bethnal Green Workhouse there are, including the old and infirm, more than 400 patients. These large numbers render necessary a perfect system of management, which will insure kind treatment to the inmates, and a degree of economy that will not prove oppressive to the parishioners; and it is to the clashing of these interests that many of the complaints are to be attributed. On the master and matron, then, devolves the heavy charge of preserving order and preventing waste in these gigantic households: with these, in the absence of the relieving officers, rests the responsibility of admitting casual applicants or others who are unprovided with formal orders of admission. There are also the chaplain, house-surgeon, the schoolmaster and the school mistress, one or more paid superintendent nurses, who are chiefly entrusted with the internal management of the house: there are also the relieving officers, who seldom reside on the premises, whose duty it is to investigate the circumstances of those who apply for both in-door and out-door relief, keep accounts, and make the necessary payments: there are also the pauper nurses, cooks, night and day porters, &c.; but it is to the Board of Guardians that all these officials are in the main responsible. It is the Board which decides upon contracts for provisions, &c., fixes the extent of the rations, and should in their weekly rounds attend to any complaints which are justly made by either old or young: to this body the charge of any general or extensive mismanagement must be laid. Therefore, when we hear, in any particular parish or district, continual charges made of wholesale sanitary neglect; of poor people perishing with hunger; of sick persons being kept waiting at the door for long hours for admission during the day, and those destitute in the night turned away; there can be no doubt that, however much blame there is to be attached to individuals, it is to the Board that we must look for any effectual remedy of the present state of management. As is the case with families, where the kindly nature or otherwise of the principals may be in a measure judged of by the behaviour of the servants, so is it in connexion with workhouse officials. In some parishes complaint of neglect or cruelty is seldom heard: in others it is unceasing; and in a great measure this is caused by the inequality with which the poor-rates are levied in various parts of the metropolis, which causes the guardians to use a degree of parsimonious pressure of which some of them may not approve. But much of what is considered a saving is an actual loss: take, for instance, the commonly practised system of employing pauper nurses. The damage done by this means amongst the young of both sexes who are reared in these establishments is greater than can be calculated. On this point Mr. Farnall remarks:—"It was impossible for guardians to put any confidence or trust in pauper nurses, or unpaid officers. If they knew as much how paupers behaved to paupers as he did, they would not employ them. The Poor-law Board had left no stone unturned to induce guardians to pay their nurses."

As regards some of the paid officers, the smallness of the salary prevents the most suitable persons from seeking the employment. In the workhouse schools there should be effective teachers; but how can they be obtained on the terms which are often offered, and which would not be accepted by a decent housemaid? Of equal importance is the selection of the porters of workhouses, for in their hands often rests the power of life and death: they should be persons of intelligence, who can be held responsible. At present, many of these officers are the cause of much mischief, and often they are made "scapegoats" for faults which should be laid elsewhere.

After looking at the subject,—not from the Board of Guardians', the master of the workhouse's, or the relieving officer's point of view,—but with a view of the immense destitution and misery which exist, and knowing in how many instances the present system of poor relief is insufficient for its purpose, we ask, at the least, that an inquiry should be made into the present condition of the many thousands who are now suffering. It is not right that the poor, when in actual starvation, should declare, as we have many times heard them, that "they would rather die than go into the workhouse;" or that in time of temporary but great distress relief should be refused unless the poor furniture of a house be sacrificed, or those who are able to earn a part of their living are forced into the workhouse, where men, women, and children are separated, and where the persons thus treated (at the rate of fifty and upwards per cent.) become perpetual paupers, evermore chargeable to the rate-payers and comparatively useless to society.

PROPOSED GOVERNMENT MEASURE RESPECTING THE CASUAL POOR OF THE METROPOLIS.

FOR many years past, in our notices of the condition of the London poor, attention has been often directed to the inadequacy of the present system for the relief of casual destitution. The unequal way in which the plan works has been shown; how hardly it bears upon the poor; and how heavily it presses upon the parishes which are inclined to do their duty. We have carefully observed the effect of the arrangement; and have long been of opinion that the only right way of meeting the evil is the provision of *places of refuge*, supported by a fair rating, in proportion *to rental, of the united metropolitan parishes*. It is satisfactory, therefore, to find that a movement is in progress which seems likely to carry out these views. The proposed Bill sets forth that the metropolitan parishes should make out separate accounts, half-yearly, of the amount of relief given to the houseless poor between the hours of eight p.m. and eight a.m. The account is, on being submitted to and passed by the official auditor, to be transmitted to the Metropolitan Board of Works, who are authorized to pay the same out of the moneys raised under the powers of the Metropolis Local Management Act, such payments to stand as part of the expenditure of the Board. The Bill gives power—subject to the approval of the Poor-Law Board,—for parishes to construct refuges. There is but little hope that this Bill will pass through the Parliament of this session, but we hope our legislators, even when they are in pleasant and healthful places, will think of the vile conditions which exist in the heart of England, and consider not only how they can ameliorate the disgraceful circumstances, but strive for things far better than most folks at the present time contemplate. The Metropolitan Board have declared their unwillingness to have anything to do with the collection of money for the purpose.

THE APPLICATION OF SCIENCE TO THE DETECTION OF CRIME.

IN days gone by, when the neglected condition of the police was notorious, the detection of the most serious crimes was almost impossible, and the plan was for the City officers of the law to have periodical "field-days" to gather up the rogues and give an example to the whole, by chancing to hang up those who were deserving of such punishment. For a long time the trial for secret murder was not dependent upon the evidence or the production of links in the chain of facts, but on the ordeals of touch and fire, or upon the risk of the victory of contending champions. Even in the reign of Henry VIII., protection of the lives and property of the Londoners was not systematically arranged for, notwithstanding that the marching watch yearly displayed its picturesque pageantry. In Queen Elizabeth's days the state of affairs became somewhat better, and in the streets of the capital there were, no doubt, the "Dogberries" and their companions, from whom Shakspeare sketched from the life his famous characters. Nor was the condition of the country any better than that of the town, for wholesale robbery and murder were common throughout the land. Along the Borders the small chiefs afforded a feeble security to property, levying a tax upon their neighbours for doing so; but this was such a frail and uncertain security, that it became necessary to appoint wardens of the marshes, for the purpose of keeping this voluntary police force in order. As time passed on, the slow-moving night-watch did but little either to prevent the commission of crime or to bring the guilty to punishment. There were also the beadles of the City wards, whose office it was to act as constables, and keep a check over evil-doers; but it was not until the days of Jonathan Wild and Townsend that thief-catching began to be considered as a science; and a combination of persons both in and out of uniform, under the direction of a clever head, became a means of detecting the perpetrators of offences which otherwise would have escaped punishment. Since the time mentioned, the detective police force has greatly extended, and at one time had an over-good character. Means are provided far more certain than the blood-hound to hunt down the robber and the murderer. If the offender be aided by the speed of the locomotive, there is the electric telegraph against him, which is more rapid still; and great was the surprise of all when this agency led to the apprehension of Tawell, the Quaker. Since then many who have done wrong, and who trusted to the swiftness of the rail, have been caught, both to their confusion and surprise. Besides this, photography has been called into use with excellent effect. By this means the portraits of many of whom the police were in search have been multiplied, and sent to all the stations in the metropolis, and throughout the country. In several of the prisons, photographs of those who are likely to be again "wanted" are taken and kept for the purpose of identification. In the case of the supposed murderer of Mr. Briggs, a photograph given by him to an acquaintance, afforded the opportunity for Mr. Death to identify him as the person who exchanged the gold watch-guard for other property; and now, by the power of the steam-engine, the mail-packet will outspeed the sailing-ship *Victoria*, on board of which the murderer is believed to be; and by the time he reaches New York, the police and those who are able to apprehend him will, it is to be hoped, be in waiting for his apprehension.

Nevertheless, with all these aids the police are losing reputation; and, as it seems to us, not unjustly. We fail to discover the exercise by them of any real acuteness; and, indeed, know of cases where the greatest negligence, to use no worse word, has been shown when no reward had been offered. A Parliamentary inquiry before long will probably be necessary.

SCHOOLS OF ART.

A DEPUTATION of managers and masters of Schools of Art recently waited on Earl Granville, at the Privy Council Office. It was headed by Mr. Beresford Hope, who dwelt upon the points which the schools desired the Committee of Council to take into consideration before any new minutes founded on the recommendations of the late select committee of inquiry were issued. These were mainly that there should be an extension of the meaning of the term "artisan," so as to include small tradespeople, clerks, apprentices, &c., and that the schools throughout the country might be cheaply and efficiently worked with an amount of direct State aid equal to all the fees and subscriptions raised by the schools themselves, viz., 20,000*l*., as against 46,600*l*. claimed by the Department of Science and Art to have been spent upon the schools during the past year.

The Select Committee on Schools of Art have embodied in various resolutions the recommendations to which they have agreed. The principal of them are:—"That a central training school for teachers be maintained as at present, and sufficiently qualified scholars from local schools be admitted to the training school at the expense of the State, the study of decorative art useful for manufactures being the primary object; other scholars should also be admitted to the training school upon payment of remunerative fees. That a national competition of works from all the local Schools of Art continue to be held annually at South Kensington, and prizes awarded. That the conditions of granting any State aid to local Schools of Art be:—That night classes for artisans be open at least three times a week, at fees within the reach of artisans; that the teachers be certified, and receive the whole of the fees of the artisan classes; and that the localities provide suitable premises, and pay all charges for rent, taxes, and repairs. That no further grants be made in aid either of building or fitting Schools of Art.

MOSAIC WORK IN ST. PAUL'S CATHEDRAL.

ON Friday, the 22nd, while the big clock was striking three, the covering was removed from the first of the mosaic pictures with which it is proposed to decorate, as funds become available, the interior of the metropolitan cathedral. It fills one of the eight spandrels of the arches under the dome (the south-western), is inscribed "Isaiah," and was executed by Signor Salviati (who, as our readers know, is also at work at Windsor), after a design by Mr. Alfred Stevens, and under the general direction of Mr. Penrose. The cost, including the design, if the area covered be as stated, about 300 feet, will be something under 2*l.* 10*s.* per foot superficial. The picture consists of three figures: the prophet seated regarding a tablet held by an angel to the left of the spectator, and a second angel on the right holding another tablet, and which may be intended to convey that by spiritual interposition Isaiah was enabled to give forth prophecies to the world. The back-ground is of gold. Some indistinctness in the design is caused, especially when the light in the building is not very good, by the absence of those bright lights and strong shadows which are to be found in the ancient mosaics, and which are needed in all pictorial representations intended to be seen from a distance. Thus the tablet held by the angels mixes up with the figure in both cases. The piece of floating drapery from the shoulder of the angel on the left side, is open to cavil, and the same may be said of the perpendicular line formed by the leg of the prophet against the couch. Nevertheless, as a whole, it seems to us a successful first essay: there is a certain grandeur about the composition, and the colour of the lower portion of the picture is harmonious and pleasing. We sincerely hope that money will be forthcoming to admit of the continuation of the work.

AYLESBURY CORN EXCHANGE AND MARKETS.

THE foundation stone for this building was laid on Wednesday, the 13th inst., by Lord Carington.

The building, which is to be in the Elizabethan style, will be faced with red bricks and Box ground-stone dressings. The front will consist of three archways, the centre one for carriages, 18 ft. wide; and the other two for foot passengers, each 7 ft. wide, supported by pillars. The passage through these archways will lead into a new road which will open a thoroughfare. Above the archways will be two rooms separated by sliding doors; and, when thrown into one, forming an assembly-room, 42 ft. by 33 ft., with retiring-rooms and other conveniences.

The front contains a bay window, surmounted by an ornamental gable with a clock-face and Elizabethan terminals. This part of the building will be entered by a stone staircase on the left-hand side of the archways, surmounted by a mansard roof with a cresting. The Corn Exchange will stand at right angles with the archways. The building will be 90 ft. by 45 ft. in the clear, the roof being supported by semi-circular wrought-iron ribs, the spandrels filled in with tracery. The height in the centre will be 48 ft. Light will be afforded by a skylight extending a distance of 70 ft. along the centre of the roof as well as by clerestory windows. The construction of the walls will be peculiar: it is designed to economise space, and to resist the lateral pressure of the roof. The space between the buttresses will be enclosed, and form offices for corn dealers and others, to the number of twenty. At the end nearest the archway will be a gallery approached by the staircase before mentioned: at the farther end will be the orchestra.

Between the Corn Exchange and the general Market will be a kitchen, scullery, and butler's pantry for use on the occasion of public dinners. There is also an office which will probably be let with the wine-cellars under the market, and a tap for the sale of beer. The general market in the rear of the building will extend along the side of a new road. This building will be 112 ft. long and 61 ft. wide, and covered with about two-thirds slates and one-third glass. The roof will be in three spans, and supported by iron columns 14 ft. high, with ornamental brackets.

The contract price for the buildings, exclusive of the kitchen arrangements, cellars, and fittings, is 7,064*l.* The architect is Mr. D. Brandon; the builder, Mr. E. Conder; and the clerk of the works, Mr. G. French.

"THE EXHIBITED MACHINERY OF 1862."

WITH reference to part of our recent notice of this book, touching the projectile theory of boiler explosions, Mr. D. K. Clark requests us to insert the following portion of a letter from Mr. Colburn, which he considers a distinct acknowledgment of the justice of his claim: with this request we willingly comply:—

"*Nov. 23rd*, 1859.

About the Boiler Explosions, I am ashamed to say I have done nothing yet. I intended to adhere to the arrangement we made the last evening I was at your house; but I have additional ideas on the subject, which have kept me thinking over the theory still more. I think it will all be clear enough, though, and that its publication can be brought into a moderate compass. Our names appearing, as was understood between us, I should rather prefer that *you* should write a brief introduction, stating the share of each. I believe I was the one to suggest the disengagement of the steam from hot water. You confirmed my belief in several ways; and you have given me nearly all I knew of the action of steam by momentum. My views on decomposition, electricity, &c., are borrowed, and I lay no claim to originality in them. I hope to go at it soon."

Mr. Clark adds,—"As I have often before proposed, I am quite ready to talk over the matter with Mr. Colburn, in the presence of witnesses, to settle any little discrepancies of evidence."

Another correspondent on the same point asserts that the leading features of the theory will be found "stated in a paper by Mr. Sewell, Assoc. Inst. C.E., which was read by Mr. Wm. Fairbairn, of Manchester, before the British Association, and was afterwards published in the *Mining Journal* about 1853." We are not disposed, however, to pursue the controversy.

Touching another portion of the book referred to in our review, we print the milder portion of a letter from another commentator:—

Had the author confined himself to the description and delineation of the various machines, the objects of such a publication would have been better served; but in one department, at least, that of hydraulic mechanism, he has thought proper to contrast the merits of two centrifugal pumps, which, perhaps, attracted more popular attention than any other items of the varied mechanical display: one was the patented invention of Mr. Gwynne, as manufactured by his firm; the other being Appold's pump, as manufactured by Messrs. Easton, Amos, & Sons. He proceeds to discuss the merits of both; depreciating the former and lauding the latter; jumping at once from the position of compiler and commentator to that of a zealous partisan. Computations in favour of Messrs. Easton's Appold pump set forth an excess of performance, which that firm did not claim for themselves: he alleges that Messrs. Easton's pump, at a speed of 124 revolutions per minute, threw 184 tons of water! whilst Messrs. Easton themselves state, as published in the Illustrated Exhibition Catalogue, that their pump, at a speed of 118 revolutions per minute, threw 100 tons of water.

Mr. Clark's position of Superintendent of the Western Annexe, together with the authorship of the announced publication on its exhibited contents, invested his *dicta* and opinions with some importance. On the other hand, one of the firm of Messrs. Easton, Amos, & Co., was engineer to the Royal Agricultural Society, and as constructive engineers, they supplied water to the Horticultural Gardens, and to the Exhibition itself, being contractors as well as competitive exhibitors.

Apprehensive of the effect of partisanship, Messrs. Gwynne appealed to the Jury of the International Exhibition of 1862 to have their patent centrifugal pump carefully tested, offering to bear any expense incurred; but the jury refused. The patentees then engaged Mr. Z. Colburn, editor of the *Engineer*, to make report thereon. That gentleman made the examination, testing both Messrs. Gwynne's centrifugal pump and Messrs. Easton & Amos's "Appold" pump; "having ascertained the efficiency of each, both as to the absolute discharge, and as to the proportion which the useful work done might bear to the power expended:" the epitome of computation is as follows, viz.:—

"As compared with the full theoretical efficiency of 100 per cent., Messrs. Gwynne & Co.'s pump reached 11¼ per cent. nearer to this than Messrs. Easton's 'Appold' pump, and, as compared directly with Messrs. Easton's 'Appold' pump, Messrs. Gwynne & Co.'s did 16 per cent. more work in proportion to the power applied."

In addition to this attestation, various professional gentlemen gave their approval of the computations, and acquiescence in the results.

M. A.

STATUES BY MR. STORY.

MESSRS. JACKSON & GRAHAM, of Oxford-street, have in one of their rooms at this moment two very interesting statues by Mr. Story, who exhibited "Cleopatra and the Sybil" in 1862. One, a sitting figure, is called "Sappho;" the other, standing with upraised right hand, the left holding a sword, "Judith." The face of Sappho is not that of a Grecian, but is one, nevertheless, saddened, it may be supposed, by her unrequited love for Phaon, that fixes and delights the spectator. The drapery is admirably disposed (as is the case with the "Judith"), but the hands are over large. Great manipulative skill is shown in both. Notice, for example, the manner in which the Etruscan necklace worn by Sappho is wrought out of the marble, and the treatment of the back of Judith's head.

THE PROPOSED O'CONNELL MONUMENT.

THE question of a monument, of which a statue should form a chief part, to the memory of the late Daniel O'Connell, is again being agitated. It is proposed to collect and spend on this object a sum of 10,000*l.*, of which nearly 6,000*l.* are stated to have been already realised.

It has been decided, almost unanimously, that the artist should be a fellow-countryman of the person commemorated.

On referring to the discussion at a late meeting, held on the 6th inst. in the City Hall, Dublin, the committee divided on the advisability of holding non-resident Irish artists eligible for competition. In connexion with the proposed monument, several names have been mentioned not unknown to fame; foremost amongst them Mr. Foley and Mr. MacDowell, non-resident; Mr. Farrell and Mr. Kirk, resident in Dublin.

Mr. Foley has, we have heard, already been consulted on the subject by the committee or some individuals of it. This act has been the cause of dissension, it being thought by others not quite proper to let the work be executed out of Ireland, which would probably be the case were Mr. Foley, the artist, employed.

It has been stated that Mr. Foley has declined to compete, should the final decision of the committee authorise a competition. Mr. MacDowell, however, has expressed himself willing to do so.

At the late meeting already referred to, on a show of hands at the close, the original resolution was carried by a small majority against an amendment in favour of giving the work directly to Mr. Foley.

The resolution is as follows:—

"That while the committee are advised that it is likely some of the most eminent Irish artists will not contribute designs in competition for the prize, they deem it advisable to afford opportunity for the widest possible exercise of genius in the production of the design, and to that end advise the committee to invite designs by competition; reserving to themselves, meanwhile, the power of ordering a design from an artist or artists of eminence to be selected by the committee, should they decide on adopting this course. That the following prizes be offered for designs for the O'Connell Monument, by Irish artists, architects, and others. For the first in order of merit, 100*l.*; second, 60*l.*; third, 40*l.*; the design to be in accordance with the following instructions and conditions:—'The Statue of O'Connell to be the most prominent feature in the monument; statuary groups or bas-reliefs to form features of the structure; the monument to be designed on an estimate of the minimum sum of 10,000*l.*; the design to be a sketch model on the scale of 1 in. to the foot. The ground granted for the site is 20 ft. square, and it is probable that a larger space in length, though not in width, may be obtained if required. Models or designs to which prizes may be awarded shall be the property of the committee. The committee will not be bound to accept or award prizes to any of the designs that may be sent in.'"

SANITARY PRECAUTIONS.

LET us again, if it be not already too late in the hot season, offer some advice on this most essential point. The summer heat, especially with the great drought of the season, makes all outdoor pollution the more dangerous, and necessitates the greater sanitary care. In all instances it is needful, at this time of the year, to examine carefully what is deficient, and also to see what improvement can be made, both in town and in country, for the preservation of life and health; especially in those places to which the pent-up Londoners and others living in large cities are wont to flock for the enjoyment of fresh and pleasant breezes. In these days the heads of families look at the death rates of the various "Health Retreats," as they are often wrongly called, before they entrust those who are dear to them to such retreats. At the seaside or other spots, occasionally, more actually

die per thousand than die on the average in the metropolis, and some other thickly populated towns. It is, therefore, to the interest of all connected with property in these neighbourhoods, by improved drainage, by the construction of good and well-arranged dwellings, and by a proper system of scavenging, to make them what they really would be but for the impurities occasioned by neglect.

From time to time we have looked with care at the annual death-rates given in the reports of the various localities, and, with pain we must say, have noted the terrible difference which exists in places that have the same natural advantages, and the means of prolonging life and promoting health. We do not allude just now to those spots where persons in the last stages of consumption, and some other fatal diseases, are often taken; but to those where people in the ordinary state of health are in the practice of going in large numbers; and it is a sad fact that in many such places the annual death-rate is frequently from eight to ten, and even more, in the thousand per annum greater than it ought to be.

An examination of the Registrar General's valuable reports shows that in those health-resorts, when the authorities have gone properly to work, there is the sure consequence of a decrease in the annual number of deaths; and it is to such real "health-retreats" alone that sensible fathers of families send their wives and children, and go themselves as often as they can spare time from their busy city pursuits.

If the Registrar-General were to prepare a list of the chief places to which persons resort for summer recreation; and, against each, place the death-rate, and its increase or decrease for the last ten years, such a list would be most valuable. It might be suspended in the hall at the office in Somerset House, to be easily inspected by those interested; or even more good would be done by preparing such a list annually for the press, at the season when the swallows come, and the "leafy month" is at hand.

The drought of the present season is believed to be greater in some districts of the country than it has been for forty years. Pasturage is dried up, and cattle are already being fed on the new and scanty crop of hay. As regards the washing away of the festering pollutions of summer, this drought is a most serious matter, and betokens great evil to health and life in the autumn; more especially as there has also been a want of thunder-storms to "clear the air," and assist, with their vivifying ozone, in promoting the scavenging decomposition and dispersion of animal and vegetable refuse. All the more, on this account, too, is there pressing need of active sanitary measures of a preventive nature at the present moment.

RAILWAY MATTERS.

WE hear that the directors of the London and South-Western railway have given instructions for placing a glazed aperture in each division of their carriages, such as was recommended in the *Builder*. They will be circular, and provided with curtains (?) so as to insure privacy to the passengers, but will, at the same time, in the event of an assault by one individual upon another in any one of the carriages, afford to the occupant of an adjoining compartment the means of identifying the offender.

A correspondent, "T. A. S.," suggests a simple and practical means of communication between passengers and guards; but such means have over and over again been suggested and been laid before the directors and managers of railways. It is not from want of practical and simple means that some such communication has not been long ere now established between passengers and guards. We have often, and for many years, insisted, that the only really satisfactory mode of communication between passengers and guards would be by the formation of what we called a watchman's beat, either outside or inside, so that the guard,—who would really then be a guard, and not himself a helpless prisoner,—would regularly traverse the train, as a duty, while in transit. This, however, would occasion a little remodelling of railway carriages, and perhaps a little re-arrangement or re-construction even of the line itself as regards the width of arches, the position of posts, &c.; and directors doubtless have the fear of the cost in view. So long as a guard or driver runs the risk as he now does of having his head smashed if he only thrust it out a little to one side of his train on the out-look for accidents, there seems to be a difficulty in forming an outside beat along the sides of the carriages; and as for the interior, although such is already the case in America, and occasionally on the Continent, new sets of carriages must with us be made to meet the object in view. The suggestion of glass compartments is, perhaps, the next best, although that does not enable passengers to stop the train, and might not, on occasion, even prevent murder,—as by a madman, for example; although it would certainly produce a wholesome influence on murderous villains in possession of their reason and their senses, if there be any such.

At the Sheriff's Court, Red Lion-square, a few days since, a special jury awarded 18,000*l.* to St. John's College, Cambridge, for some property at Cow-cross, required by the Metropolitan railway.

A locomotive coming from Spain has passed through the Pyrenees into France along the new series of tunnels. The official inauguration of the line is fixed for August 15.

The traffic receipts of railways in the United Kingdom amounted, for the week ending the 9th of July, on 11,308 miles, to 663,892*l.*, and for the corresponding week of last year, on 10,911 miles, to 610,648*l.*, showing an increase of 397 miles, and of 53,244*l.* in the receipts.

THE GLOUCESTER SURVEYORSHIP.

AT the last quarterly meeting of the Local Board of Health, the clerk read the report of the committee appointed to consider the applications for the office of city surveyor, &c. Of the twenty-eight candidates the committee had selected four,—Mr. Fowler, assistant borough surveyor at Leeds; Mr. John Richardson, surveyor to the Barnsley Local Board of Health; Mr. John Ross, assistant surveyor at Bradford; and Mr. Jowett, in charge of the works at Dorchester. Of these four they especially recommended Messrs. Fowler & Richardson; and, upon a division, the votes were thirteen for Mr. Richardson, and four for Mr. Fowler, one member declining to vote. Mr. Richardson was, therefore, elected to the surveyorship and the offices connected with it, at a total salary of 250*l.* a year. The following resolution was also unanimously passed:—"That Mr. McLandsborough's resignation be accepted, and that the thanks of the Board be presented to him for the manner in which he has performed his duties during the three years he has held his office, and for the zeal and attention he has shown in carrying out the various works undertaken by the Board, and generally for the services he has at all times readily afforded in the management of the corporation property."

COMPETITIONS.

Wyggeston's Hospital, Leicester.—The design marked "*Desideratum*" has been selected. The author is Mr. Thos. Chas. Sorby, of London.

Chester Town Hall.—The designs, twenty-nine in number, were referred to Mr. M. D. Wyatt, who has reported on them and recommends the one marked "Love's Labour" for the first premium (100*l.*), and that marked "Deva," in black ink, for the second (50*l.*). Touching the cost, Mr. Wyatt says in his report:—

"To state the case broadly, from a careful computation of the cubical areas of many of the schemes, it would appear that of those really affording the accommodation prescribed, the most compact of all require about three-quarters of a million cubic feet of building. The most extravagant of all that of 'Red Cross'—rather understated, demands about one million and a quarter; and that the average, under which 'Love's Labour' slightly falls, would involve (belfry included) about one million cubic feet. There is nothing peculiarly extravagant in the style of work proposed by the author of 'Love's Labour,' and I therefore unhesitatingly recommend it for adoption, in the full belief that, whether its cost exceeds or not the sum named in the instructions as the probable limit—16,000*l.*—it would not cost more than would any other design worthy in any respect of realization.

Next to 'Love's Labour' I have placed the design under the motto 'Deva,' in black ink. Had the first-mentioned not have presented itself, I believe you would have had a satisfactory structure if this design had been selected for execution. The exterior would have been picturesque, English, and civic-looking. The plan is to be commended in every particular, excepting a few, which might probably be easily remedied on revision. I think it very good, but still, considerably less good than 'Love's Labour.' After these two, but at a considerable interval, I should place in order of excellence for various good qualities, 'Cheshire,' 'Cirium,' 'Non nobis Domine,' 'St. Werburgh,' and 'Elizabethan.'"

Hexham Corn Markets.—Are any of your readers aware what decision has been arrived at by the directors of the above building? It is now more than two months since the designs were sent in, and a competitor asserted, a fortnight since, the premiums had been awarded.

ANOTHER COMPETITOR.

A GYMNASIUM.

LIVERPOOL.

THE first stone of a new gymnasium has been laid in Myrtle-street, Liverpool, nearly opposite the Philharmonic Hall. The building will occupy 1,450 square yards. On the principal floor, on the level of the ground, are the entrance-hall, 12 ft. wide; gentlemen's room, committee-room, ladies' room, bath-rooms for ladies, bath-rooms for gentlemen, lavatories, store-room, professor's room, office, and the gymnasium proper,—an apartment 105 ft. long, 75 ft. wide, and 45 ft. high. There are twelve dressing-rooms attached. There is a wide gallery at two sides and one end of the gymnasium, generally used for the various exercises, and intended for spectators on grand occasions. In addition to the floor space there is a space of 105 ft. long by 28 ft. wide provided in the roof for trapeze and other exercises requiring and imparting steadiness and nerve. On the first floor there are the school of arms, a room 50 ft. long, 27 ft. wide, and 15 ft. in height; an armoury, dressing-room, and porter's apartment; and in the towers, store-rooms, tanks, and porter's rooms. The basement contains work-rooms, cellars, apparatus-room, &c. There are two separate main staircases, and the rooms for the sexes are completely detached. There are handsome arcades between the school of arms and the gymnasium, connecting them, and adding to the vista and general effect. The windows are at the sides and ends, close to the roof, leaving the walls free for ornament and for fixing the apparatus. The light being admitted from so great a height, there will be an air of privacy and seclusion in the gymnasium. The building will be warmed by hot-water apparatus. The elevation towards Myrtle-street will be in the Italian style, and will consist mainly of a low centre, with towers at either end 60 ft. high. This elevation is to be wholly executed with rubbed stone. Its frontage is 94 ft. Mr. Walter Scott is the architect, his designs having been preferred in a competition. This plot of land, containing 1,450 square yards, has been purchased for a sum of 2,539*l.*, on corporation lease. The contract for the whole building has been taken by Messrs. Nicholson & Ayre for 7,060*l.*; and they have bound themselves to finish the interior, the hall, and the school of arms by the 1st of November, and the whole building by the 21st of December.

PRESERVING TIMBER FROM DECAY.

EXPERIMENTS by Mr. Crepin are recorded in the *Annales des Travaux Publics de Belgique*, in connexion with Baltic timber creosoted by Mr. John Bethell's process. In October, 1857, creosoted fir, which had been taken from wood prepared in the ordinary way for the State railway, beech prepared with sulphate of copper, and fir and beech not prepared in any way, were placed 6 ft. 3 in. (1·90 metre) above the water-mark upon the piles of the east pier at Ostend. In the beginning of January, 1859, the pieces were taken down and inspected. It was found that the piece of fir unprepared was much perforated by the teredo; that the piece of beech unprepared was perforated from one end to the other; that the pieces prepared with sulphate of copper were all three eaten by the teredo; and that the three pieces of creosoted fir alone were intact, and without a trace of the teredo. Mr. Crepin concludes that he cannot too strongly recommend the use of creosoted fir wood in hydraulic engineering, in preference to oak; since, in addition to its being cheaper, there is no doubt of the creosoted fir lasting longer. The Government Public Works Department has adopted this process, and constructed part of the dyke, and the whole of the American foot-passengers' bridge, in the new works at Ostend, of creosoted red fir. A report of Mr. Moir, with respect to the piles and other timber in the pier at Leith Harbour, creosoted by Mr. Bethell, is equally satisfactory.

THE NEW ACT ON GOVERNMENT ANNUITIES.—This Act has been issued. Annuities may now be granted up to 50*l.*, and may be paid for in smaller instalments and at shorter periods than hitherto. An assurance on death is not to be entered into for or on behalf of a person under 16 or over 60; and is not to be for more than 100*l.* or less than 20*l.* The Act is not to come into force until tables made in pursuance thereof can be legally acted upon.

PARLIAMENTARY.

'ce of Works.—Public Recreation Grounds.—Doulton gave notice that next session he d call attention to the organisation of the s of Works, and would move that the conso- ion of the several branches of the public ce, in relation to architecture, art, and ce, should replace the present anomalous inconvenient arrangements. He also gave e that he would move for a select committee quire into the open spaces within the metro- an district, with a view to prevent their sure.

nders for Works at Windsor Castle.—In ver to Mr. Vansittart, Mr. Cowper said, cer- alterations had been made as to the recep- of tenders for these works, with the view of toting economy; but those alterations would in any degree exclude the tradesmen in dsor, who had hitherto done this sort of , from still sending in tenders.

ork Lane.—In answer to Sir J. Shelley, Mr. per said, he was very glad that the Metro- an Board of Works had taken into their con- ation the crowded traffic of Park-lane, with w of remedying it. They proposed, how- that Hamilton-place should be opened for purpose, instead of adopting what he ght a better plan, viz., widening Park-lane. ilton-place was under a lease from the n, and that lease could not be broken, but dvisers of the Crown would not oppose a ngation of Hamilton-place if the Metropo- Board of Works should desire that.

e Serpentine.—In answer to Mr. H. Lewis, Cowper said it would be dangerous in the ent hot weather to meddle with the Ser- ine, but it would be cleansed in the cold cher.

CONTINENTAL NEWS.

amburg.—The want of a zoological garden long been felt by the inhabitants of this especially as the connexions of our mer- nt princes with all parts of the world seemed cilitate its establishment. At last, about a and a half ago, some fifty influential gen- en met at a dinner, speeches were made, subscription lists were handed round—*tout ne chez nous*. Most of the subscriptions con- d of *animals*, one gentleman signing for a le of lions, another for a bear, a third for a key-house, &c; and in less than a year burg could boast of a well-stocked zoologi- establishment. Amongst the latest additions large aquarium, constructed from the plans essrs. Meuron & Haller, architects, who were led by the advice of Mr. W. Alford Lloyd, rium manufacturer, of London. This build- is 64 ft. long by 34 ft. broad: the floor is t. below ground level, and is reached by two ts of steps, 10 ft. wide. The interior is ded into what may be called a nave and two isles, 9 ft. wide, the latter being roofed in glass, similar to hot-houses, each contain- ive aquaria. The sides of these aquaria are ate slabs, 2½ in. and 2 in. thick, the sides spectator being of glass, 1 in. and ¾ in. r. The central division, or nave, is 16 ft. , and is lighted only by means of the rays e sun passing through the aquaria on either

The effect of this arrangement is, that all ight is thrown upon the specimen cases, the tator remaining in half light. The arrange- t for lighting the building by night is lar, argand burners throwing no shadows, reflectors being fixed near the surface of the r. A hot-water apparatus, and diverse con- nces for ventilation and for keeping the ding at an even temperature throughout the , complete this novel arrangement.——The Museum of Fine Arts is shortly to be begun, ers for masons', joiners', and carpenters' k being advertised for in the local journals. architect is Mr. F. Laeisz.

remen—is to have a new exchange, the build- to contain a large hall, reading-rooms, tele- h offices, &c.

eipzig.—The idea of testifying to Herr von st the satisfaction of all Germany, for the ner in which he represented the Diet at the conference in London, found little favour at time; but now the matter has again been n up, and subscriptions are being raised. ady some 5,000*l.* are at the disposal of the mittee, and it is probable that a villa, beau- ly situate on the banks of the Elbe, just pleted, and now for sale, will be purchased presented to him.

Cologne.—This city is just now celebrating a great church festival, the 500th anniversary of the arrival of the bones of the Three Magi. These relics are supposed to have reposed at Milan for centuries, and when Frederick Barbarossa conquered and destroyed that city, Archbishop Reinold, of Cologne, obtained the remains as his share of booty, and sent them to his native city, where they arrived on the 23rd July, 1164. Many of our readers have, doubtless, seen the costly shrine in which the relics are preserved. If we remember rightly the *skulls* of the Three Magi are preserved at Venice.

Hanover.—A decree, dated June, 1861, ordered the construction of a "Royal Guelphic Museum," to contain collections of antiquities belonging to the Ducal (now Royal) House of the Guelphs, and to the countries ruled by them. Already this Museum possesses a degree of interest hardly to be expected in so short a time. There are collections of armour, and implements of war and the chase; an array of costumes, some belonging to the middle of the sixteenth century; cases of jewelry, formerly in the possession of the House of Brunswick-Luneburg; collections of glasses, silver drinking-cups, and quaint musical instruments, &c. There is a curious display of instruments of torture, formerly used,—the last as late as 1818, when a man was cruelly ill-used for stealing a horse. The coins are interesting, and there is a complete series of English money, beginning with that of the time of George I. Not the least interesting is some church plate brought by Henry the Lion from Palestine in the twelfth century.

Athens.—The Austrian Consul, Dr. von Hahn, has sent a detailed and interesting paper to the President of the Austrian Geological Institute, Hofrath von Haidinger, giving an account of his recent excavations at Troy. With only thirty-six workmen at his disposal, he succeeded, between the 29th of April and 21st of May, in opening up the entire extent of the fort on the Balidagh, and discovered many "cyclopian" walls. Sculpture there was none; but Dr. von Hahn collected some Greek coins, lamps, and figures in burnt clay.

FROM SCOTLAND.

Edinburgh.—The Edinburgh and Leith Sewerage Bill has now passed, with a few unimportant amendments, which we reagreed to by the Commons.

Dumfries.—The "Apostolic" or Irvingite congregation have resolved to erect a more commodious and elegant place of worship. The site is in Mr. Learmont's nursery, on the north side of the New-road, near the theatre. "The plan of the building," says the *Dumfries Courier*, "is the same as that of the new Episcopal Church at Dunse,—architectural designs not being copyright,—with the addition of another vestry. It is in the Norman style of architecture. The building will consist of nave, with side aisles and chancel. The entire length will be 64 ft., and the width 40 ft. The elevation to the New-road will be about 34 ft. in height, with a tower and spire at the east side. The line of front is broken, the centre or nave projecting beyond the west aisle, while the tower is in advance of the nave. The entrance is by the tower. In the gable front of the nave there is a large wheel window in eight compartments, and a large window below in two compartments. At the north gable the chancel projects about 12 ft. beyond the east aisle, and on the west side of the chancel are a large and a small vestry. In the interior the side walls are supported by four columns and arches, dividing the aisles from the nave. There will be four windows in each aisle, four clerestory windows in the upper part of the nave, and a large three-mullioned window in the chancel. At the south end of the nave there is an organ-gallery above the entrance lobby, the access to which will be by a stair in the tower. The building material is red freestone, dressed in 'blocker' work,—hewn with a narrow chisel. The interior walls will be the same as the exterior, there being no plaster work. The columns of the aisles will be polished, with carved capitals. The church will accommodate fully 200. The contractors are Mr. Joseph Watret for masonwork; and Mr. John Mein for joiner, slater, plumber-work, &c. The cost, we believe, will be fully 1,000*l.*"——In St. Andrew's Roman Catholic Church, an improvement is nearly completed by the whole of the windows being filled in with mullions in the Gothic style, executed by Mr. J. Flint. The windows have been refilled with stained glass, executed by Mr. F. Barnet, Leith. The groundwork of the windows is a geometrical design, and in each of the windows in the body of the building there are two panels, with the representations of saints. The first window from the altar on the south side contains Saints Winefreda and Francisca Xaverius; the second, Saints Robert and Helena; the third, Saints Andrew and Margaret; and the fourth St. John the Baptist and St. Elizabeth. On the north side, the first window from the altar contains Saints James and John; the second, Saints Joseph and Mary, with the infant Jesus; the third, Saints William and Helen; and the fourth, Saints Patrick and Bridget. The two windows in the front on each side of the tower, have also been erected by the congregation: they do not contain panels.

Arbroath.—The seven wells erected in the Townhead district, for the Townhead water supply, has been set in operation. The water, it is said, has every appearance of being plentiful, and the quality excellent. This water has been got in the Montrose Turnpike-road, which abounds with spring-water. The bottom of the reservoir is 8 ft. from the surface of the road, and is 45 ft. long, 5 ft. wide, and 4½ ft. in depth. At this depth the water is abundant. The total quantity which could now be drawn from the reservoir is upwards of twenty gallons per minute. An eighth well is in contemplation. The expense of the whole scheme will be about 200*l.*

CHURCH-BUILDING NEWS.

Gainsborough.—The sum of 500*l.* having been subscribed for the Gainsborough parish church alterations, it has been resolved that an application should be made forthwith for a faculty for re-building the north and south galleries, and carrying out the other improvements contemplated, including the warming of the edifice. The portion of the south gallery occupied by Sir Hickman Bacon, bart., is not, however, to be taken down or altered in any way without his written consent having been first obtained. Meantime the alterations in the church have been commenced. The joists under the floor are found to be very much decayed, and another 100*l.* or more will be required on this account. Mr. A. Allen, of Newark, is the architect; and Mr. Cant, of Gainsborough, the contractor.

Huddersfield.—St. Stephen's Church, Rashcliffe, has been consecrated. The edifice has been erected at a cost of about 2,300*l.* from plans prepared by Messrs. Blackmoor & Withers, of Sheffield.

Westow.—The church here, which is situate about a mile and a half from Kirkham, on the York and Scarborough Railway, has lately been restored, and re-opened for Divine service. The new church consists of a nave and north aisle, 50 ft. long and 21 ft. and 12½ ft. wide respectively. The chancel is of nearly the same dimensions as the old one, with a vestry on the north side. A south porch on the site of the old one gives access to the body of the church. The church walls have been rebuilt, to a great extent, with the old materials. There are simple windows of two lights in the north and south walls, with tracery in the heads, and a three-light in the west wall of the north aisle. The roofs are high pitched (as near the original as can be ascertained), and covered with Westmoreland slate, while stone crosses surmount the various gables. The interior of the church is of simple and unadorned character. The nave is divided from the north aisle by an arcade of four arches springing from circular columns. The chancel arch is of rather more ornamental character, resting on corbel shafts with foliaged caps. The walls are lined with rubble stone from neighbouring quarries. The windows are filled with cathedral glass, excepting the east and north, which are painted. The roofs internally are open to the ridge, boarded, and stained. The seats are of wainscot oak, and of low height, and open accommodation for about 400 is provided. With the exception of the chancel, which has been restored under the superintendence of the Ecclesiastical Commissioners, the whole of the alterations have been designed by Messrs. Mallinson & Healey, of Bradford. The east window is of stained glass, and was supplied by Mr. Wailes, of Newcastle, at the cost of 150*l.* The subjects are, Christ entering the House of Mary and Martha after the Death of Lazarus; Christ raising Lazarus; Jesus weeping; Jews coming from Jerusalem to comfort the Sisters concerning Lazarus; the two Sisters ministering to Lazarus

when sick; and Mary kneeling at the Feet of Jesus. The west window, which represents the Transfiguration, was supplied by Mr. Knowles, of York. Exclusive of the windows, the restoration of the nave has cost 1,000*l.*, and the chancel 300*l.*

Tockwith.—The foundation stone of a new church has been laid at Tockwith, near Wetherby. The edifice is to be built in the Early Decorated Gothic style, and will consist of a nave 6 ft. by 22 ft.; north and south transepts, 14½ ft. by 17½ ft.; chancel, 32 ft. by 21 ft.; organ chamber and vestry on the south side of the chancel, porch on the westernmost bay of the nave and circular bell-turret on the north-east corner of the nave. It will accommodate 244 adults and fifty-six children, and the total cost will probably amount to 3,000*l.* The architects are Messrs. Mallinson & Healey, of Bradford and Halifax; and the contractors, Messrs. Ridsdale, masons, Starbeck, and Messrs. Whitfield & Son, joiners, Wetherby.

Crayke (*Yorkshire*).—The church at Crayke, near Easingwold, has been recently restored and enlarged, and is now re-opened for divine worship. The superintendence of the restoration was placed in the hands of Mr. E. G. Paley, of Lancaster, architect, and according to the plans which he prepared workmen commenced operations in the spring of last year. It was then ascertained that the rafters of the roof were in many instances decayed at the ends, although sound in other respects. It was felt that the roof ought, if possible, to be preserved, and this has been accomplished. The old and new wood, of which the timbers consist, are dovetailed together, and secured by iron plates fastened upon each side. The flooring was in a bad condition, and has been removed. The aisles are now laid with flagging, whilst that portion of the area of the church devoted to sittings has a covering of thick boards, underneath which is a hollow space to prevent damp. The oak pews have been replaced by low uniform sittings. The wall of the new aisles contains three windows of two lights each. At the east end of it is a three-light window, and at the western termination is a window of two lights. The whole of these are filled in with cathedral glass. The cost of the restoration has been about 1,000*l.* Of this an outlay of 750*l.* has been incurred in the erection of the new aisle by Archdeacon Churton, the rector. The contractor was Mr. J. Brown, carpenter and joiner. He sublet the masonry to Mr. Grange; the glazing, to Messrs. Hodgson; and the staining of the seats, to Messrs. Harker & Dodsworth, all of York.

Staveley (*Yorkshire*).—The church here has been consecrated by the Bishop of Ripon, and is of the Early English style, with nave; tower and spire at west end, open through to nave, with large arch, chancel, organ-chamber, and vestry at the north side of same. The roofs are of high pitch with open framed principals, with slates of varied tints in alternate bands. The stalls in chancel are of English oak, richly carved. The pulpit and font are of Caen stone. The seats throughout are of pitch pine, with accommodation for 230 persons. The chancel is laid with encaustic tiles. Several of the windows in nave are filled with richly-coloured stained glass by Ward & Hughes, of London, and Edmundson & Son, of Manchester. The altar-rail is of brass, by Skidmore, of Coventry. The total cost will be about 2,000*l.* and all the works have been done by Mr. Freeman, builder, of Staveley, from the designs and superintendence of Mr. John Lowe, architect, of Manchester.

Hawthorn.—The Bishop of Durham has just consecrated a new church, erected at the sole expense of Mr. R. L. Pemberton, at the village of Hawthorn, almost midway between Seaham Harbour and Easington. When the living of Easington was divided, a short time ago, Mr. Pemberton, who owns the whole of the land in that district, built a parsonage-house. He also erected schools for the use of the villagers, and those for a time served as a temporary church.

Blyth.—A new church has been consecrated by the Bishop of Durham, at Waterloo, near Blyth. The edifice, which is of Early Pointed architecture, consists, at present, of a nave and short chancel. It is intended, hereafter, to extend the chancel, to erect a tower, and to build a broad aisle on the north side. The east and west windows are each of three lancet-lights under an enclosing arch, with crisped circles under it. The side windows are of two lights and similar character. There is a porch at the south-western angle of the nave. A temporary vestry is built on the north side. The roofs are open-framed; the timbers dressed and stained, with ceiling between the spars, and a space between the ceiling; and slates to obviate down-draught in the church. The seats in the nave are all low, open, and uniform; those in the chancel somewhat ornamental. An organ, by Nicholson, of Newcastle, is placed in the south-east corner of the nave. The church will accommodate nearly 300 persons, all free. Messrs. Austin & Johnson, of Newcastle, were the architects; and the builders were Messrs. Burn & White, of Blyth and Morpeth. The cost of the edifice has been 1,600*l.*, one-half defrayed by a family in the neighbourhood, who also gave the site.

Scotby (*Carlisle*).—The foundation stone of a new parsonage-house for the incumbent has been laid at Scotby, on a site on Swine-hill, at the Carlisle end of the village. Mr. David Hodgson gives the site and a donation besides. Mr. D. Birkett, of Carlisle, is the architect of the building, which will be in the Gothic style. It is to be built of the red sandstone of the district, the cost being about 1,200*l.* Messrs. Brough & Dodd are the contractors.

Gateshead.—The foundation stone of a new church, connected with the Church of England, in Gateshead, has been laid by Lady James, who is also the chief contributor towards the building. The site is in the east part of the borough. The church will comprise a chancel 31 ft. 6 in. long by 29 ft. wide, with organ chamber and vestry on the north side; a nave 71 ft. 6 in. long by 29 ft. wide; and a north aisle 72 ft. long by 12 ft. wide. The height to the ridge of the nave roof will be about 53 ft. Arches will be built into the south wall of the nave to facilitate the addition of a south aisle. The accommodation now provided is in all 540 sittings. The style is Transition. The main walls are 3 ft. thick, and the timbers of the roof of considerable dimensions. The walls will be constructed externally of snecked rubble, and will not be plastered on the inside. The roofs will be open-timbered, and ceiled between the spars.

Tonbridge.—We are requested to state that the sum of 650*l.* for the Union Chapel included architect's commission, &c.; and that the builder was Mr. Constable, of Penshurst. The building has been erected for the performance of the services of the Church of England.

DISSENTING CHURCH BUILDING NEWS.

Montgomery.—The new Wesleyan Chapel here has been opened for divine service. It was built from a design by Mr. White, architect, of London, under the superintendence of Mr. Potter, of Welshpool; Mr. L. E. Evans, of Montgomery, being the builder. The structure is in the Gothic style with a turret. The edifice is situate below the ruins of the old castle of Montgomery, and in the entrance to the town.

Willenhall.—The Wesleyan chapel has been re-opened. The building has been enlarged by extension backwards, and by transeptal projections in the sides, by which means some 250 additional sittings for adults have been obtained. The front has been remodelled, and now includes two staircase towers at the corners, surmounted by domes, with new pediments, new vestibule, &c. The style adopted is Greco-Roman, the lower part being of the Doric order, and the upper part of the Corinthian. The interior has been altered by the introduction of a series of large arches, and corresponding recesses at the communion end, by new cornices and other ornaments in the ceiling. The ground floor has been repewed, and a new pulpit erected. At the east end, over the communion, there is a large window of three semicircular-headed lights, filled in with stained glass. In the middle light is a figure of the Saviour, surmounted by a cross, with the inscription underneath:—"My kingdom is not of this world." The figure is placed under a canopy, supported by a base on which is the representation of a lamb illustrated in the text, "Behold the Lamb of God." Forming the apex of the canopy is the "Pelican of Piety." The whole is surrounded by a border. In the side lights are the emblems of the Trinity and the Holy Ghost, surrounded by a light border, and enriched by a gold stain, with monograms inscribed above and beneath, and also surrounded, like the centre light, with a border. The window was designed by Mr. T. W. Carm, and has been executed by Messrs. Chance, of West Bromwich. The night lighting is effected by three large star lights in the main ceiling, and by brackets under the galleries. The whole of the alterations have been carried out from the designs of Mr. H. Banks, of Wolverhampton, architect. The contractor was Mr. Job Wilkes, of Darlaston. The total expense incurred is about 1,500*l.*, towards which upwards of 900*l.* has already been raised and promised.

Rosedale (*Yorkshire*).—Some months ago the foundation-stone of a new Wesleyan chapel was laid here by Mr. A. C. Sheriff, of Worcester. This chapel is now completed, and has been opened for public worship. The building is of Gothic character, without much ornament. The inside measure is 40 ft. by 32 ft., and affords sittings for 250 persons. The edifice is built of local stone, pitch faced, and laid in level courses with tooled dressings, and relieved by bands and arches of a darker coloured stone. The roof is in one span, coiled at the collar-beams, which together with the principals, purlins, and ceiling binders, are exposed, and stained and varnished. The pews are framed of Petersburg red deal with solid bench ends, and stained and varnished. The contractors for the mason's, slater's, and plasterer's work were Messrs. Wood, of Pickering; for the carpenter's and joiner's work, Mr. W. Bulmer, of Scarborough; for the plumber's, glazier's, ironfounder's, and painter's works, Mr. Whitelock, of Pickering. The whole of the works have been carried out under the superintendence of Mr. Watson, of Wakefield, the architect. The cost, exclusive of boundaries, is about 500*l.*

Books Received.

A Series of Metric Tables. By CHARLES H. DOWLING, C.E. London: Lockwood & Co. 1864.

IN this series of metric tables, prepared by Mr. Dowling, the British standard measures and weights are compared with those of the metric system at present in use on the Continent. They are intended to facilitate the conversion of the one into the other in both ways,—British into Metric and Metric into British; and are therefore capable of rendering important service to all engaged with continental countries in commercial, manufacturing, or mechanical transactions. They were originally calculated for the author's own use, while professionally engaged on the Continent; and it appears from the preface that their accuracy has been certified by Professor Airy, the Astronomer Royal, a very high authority on such a subject.

VARIORUM.

"On certain Results and Defects of the Reports of the Registrar-General; from the Journal of the Statistical Society of London; June, 1864." The author of this paper is Mr. W. L. Sargant. One of his principal conclusions is thus stated:—

"Comparing the last decennial period (1851-60) with the previous one (1841-50), the improvement in the rate of mortality is very small, and is far from fulfilling the expectations of sanitary reformers [p. 175]. The excess of mortality in towns as compared with that of rural districts, is an evil too deeply seated to be corrected by improved drainage and water-supply [p. 177]."

Now, we deny either that the expectations of sanitary reformers have been disappointed with the results of drainage and water supply in towns, or that they look to drainage and water supply alone to produce all that is desired in sanitary reform. Both are essential, and cannot be neglected with impunity, though Mr. Sargant would seem to imply that they can; but so long as want of ventilation, over-crowding, and dirt, prevail in the interior of dwellings, the requirements of sanitary reformers are not by any means fulfilled. Nevertheless, the local and special reports, which have been published by scores, on the subject, show clearly that wherever drainage and water supply have been improved, there mortality has markedly diminished; and if the Registrar-General's reports show this improvement to be as yet what Mr. Sargant calls "very small," that can only show how much is yet to be done throughout the whole country in the case of even drainage and water supply, far less in regard to ventilation, overcrowding, and dirty habits. The continued efforts of sanitary reformers have already produced a decided and very general public opinion in favour of both drainage and water supply; and it is mainly by the formation of a similar public opinion in favour of ventilation and cleanly habits, and against overcrowding, that they hope to fulfil their expecta-

s.——"Report of a Discussion on the pro- d Admission of Girls to the University local minations. London: Emily Faithfull. 1864." pamphlet is published under the auspices ie National Association for the Promotion of ial Science, with which is united the Society Promoting the Amendment of the Law. shows the result of an experiment with rd to the local examination of girls, by com- son with those of boys,—a result which is idered sufficiently favourable to induce those rested in it to make further exertions towards realization of the object in view.——The *rterly* has an interesting paper on "Christian " founded on Lady Eastlake's "History of Lord," of which book, by the way, we owe readers an account, and will not long delay ment. The *Quarterly* writer dwells at con- rable length on the Art of the Catacombs. article in the same periodical, on "Travelling England," will also interest many of our ders.

Miscellanea.

ARCHÆOLOGICAL INSTITUTE.—The congress has a opened satisfactorily in Warwick, and seve- excursions, in accordance with the pro- mme we gave, have been made.

PROPOSED RESTORATION OF ST. BARTHOLOMEW'S, THFIELD.—We learn from the newspapers a committee of architects have met and e sanctioned the plans laid before the Resto- on Committee, and that the works will be tly commenced.

DEMOLITION OF AN ANCIENT HOUSE IN LON- .—In the centre of a block of houses on west side of St. Mary-axe, and only a few rs from Leadenhall-street, stood an edifice of int appearance, being constructed of wood h overhanging bay windows, except those on attic or fourth floor, which was evidently of e modern construction than the rest of the ding. Its date has been lost in the lapse of rs. This relic of old London has recently been ed down.

RESTORING OIL PAINTINGS. — A remarkable cess for restoring old oil pictures by sub- ting them to the vapour of alcohol has, it is , been perfected by a German *savant* (Herr tenkoffer), who thus restores them without real chemical action and without touching n at all. His process professes to be hanical, and merely to replace the losses ich age and desiccation have produced, and estore the original brilliancy of the pictures a process which is simple and effectual, and perfectly safe. In this view the blackness old pictures must be supposed not at all to e from smoke or dirt on the varnish.

MONUMENTAL.—To Mr. Shirley Brooks belongs credit of organising a committee, numbering e of the best known names in literature and for the purpose of erecting a memorial to late Mr. Thackeray in Westminster Abbey. consent of the dean has been obtained, and m the subscriptions flow in, a meeting will eld to decide what form the memorial shall e. —— An influential committee has been ed in London to raise a memorial to the late W. J. Fox, and a considerable sum has been ady subscribed towards the fund for this ect. The committee propose to employ the unt obtained in erecting a monument over grave of Fox, in placing a marble copy of Earle's bust of the deceased in the National trait Gallery, and issuing an edition of his ks.

THE STRIKE AMONGST THE FLINT GLASS KERS.—A fortnight ago a meeting of masters delegates connected with the flint glass le was held at the Old George, Bridge-gate, ds, to consider the advance asked for by the n. The chair was taken by Mr. S. Blunn, of cliffe. A fair and impartial consideration he question having been invited, the repre- tative of the masters drew attention to the n competition at present existing between English and foreign manufacturers, and ed that at present the masters were not in sition to grant the advance asked for. Mr. ester replied on behalf of the delegates, con- ding that the 15 per cent. advance asked for neither unreasonable nor exorbitant. The ters unanimously agreed to give the advance ked for. The men withdrew their notices, and med work.

IMPROVED CABS.—It is proposed to establish a new patent carriage company upon rather improved principles to the Hansom cab. A great deal of improvement is needed in all the London public vehicles, and certainly a better cab than the hansom is required, which is inconvenient to enter at the side, provides an awkward prospect, and has the knack of getting into innumerable difficulties. The writer of this has twice seen the cabman pitched right over the horse when it stumbled, and only last week saw a passenger thrown out head foremost into the street.

SCULPTURE BY ELECTRIC LIGHT.—Persons who passed the gardens of Apsley House a few nights ago were at a loss to understand the varicoloured lights which flashed here and there and filled the trees with radiance. The fact is, a number of works of sculpture were being exhibited by electric light to the guests of the Duke of Wellington. This was effected by large voltaic batteries arranged on Grove's principle, which were connected with lamps and parabolic reflectors, constructed by M. Serrin, of Paris. The colours applied were shades of red, amber, blue, green, and white.

ORNAMENTAL TIMBER.—The Lords Justices, in the recent case of *Forde* v. *Tynte*, decided that the question what "a prudent owner" would do in the proper or ordinary course of management can be no measure of the obligation which attaches in the Court of Chancery upon a tenant for life without impeachment of waste, with reference to timber planted or left standing for ornament; for every such tenant for life is bound by the taste or want of taste of any absolute owner by whom the timber may have been so planted or left standing: he is not owner, for any beneficial purpose, of timber absolutely and entirely so dedicated.

HAVELOCK'S TOMB.—A correspondent of the *Bengal Hurkaru*, who lately passed through Oude, gives this sad account of the present condition of Havelock's tomb:—"I reached the Alumbagh about five a.m., and could not pass without visiting the grave of Havelock. I was much surprised and disappointed to find the place utterly neglected. It might be as well, perhaps, to leave the house as it now stands, for it bears good evidence of the fighting there; but why the garden should be allowed to remain as it is cannot very well be explained. One thousand rupees expended on the garden in clearing it out and planting shrubs, and fifty rupees per month afterwards, would, I think, do all that is necessary."

THE PUBLIC WORKS ACT.—In reference to the Lancashire Public Works Act, it appears that of the loans ordered, amounting to a million and a half, only 426,000*l.* have been yet advanced. The great bulk of the expenditure has been for sewerage and street improvement works, including the formation and paving of streets. The length of the sewerage works thus undertaken is 263 miles. The area of paving and street works undertaken in respect of the above-mentioned sum is 683 acres, the length of the streets and roads made being 253 miles. The tables include almost every township of importance in the cotton manufacturing districts, there being but few which have not undertaken public works through the provisions of this Act. The health and strength of the distressed operatives have been greatly improved since their employment on these public works.

PROPOSED WORKING WOMEN'S COLLEGE.—A prospectus for the formation of a working women's college has been issued. It is intended to take as a model the Working Men's College, in Great Ormond-street, in which the principle of mutual help and brotherhood between those in different social positions has been successfully carried out. There will be in many subjects both elementary and advanced classes, taught by ladies and gentlemen experienced in teaching, and also preparatory classes in reading, writing, and arithmetic, in order to render students eligible to join the elementary classes. The fees will be very small. A coffee-room will be provided, with periodicals, newspapers, &c., and will be open every evening from seven to ten o'clock, and be made as far as possible (under proper regulations), the centre of the social life of the college. It is proposed to rent a house in some central situation—say, near either Fitzroy-square or Soho-square—and to begin with some preparatory classes as soon as possible, with a view to the college itself being regularly opened in October next.

HALIFAX TOWN HALL.—A marble bust of the Queen has just been erected in the Halifax Town Hall. It is a gift to the corporation from the ex-mayor, Mr. John Crossley, and is a companion bust to that of the Prince Consort, presented by the present mayor, Major Holdsworth.

PLÖN CHURCH DESTROYED BY LIGHTNING.—The fine old parish church of Plön was destroyed by fire on the 24th ult. The tower was struck by lightning; but it was not until two hours afterwards that the fire became apparent by the flames suddenly bursting out from end to end of the church. In three-quarters of an hour all was over.

NEW THEATRE AND OPERA-HOUSE FOR LIVERPOOL.—A limited liability company, the directors of which include some of the most influential and wealthy "merchant princes" of Liverpool, have purchased a plot of ground in Lime-street, Liverpool, near the London and North-Western Railway Station, and opposite St. George's Hall, on which they are about to erect a theatre and opera-house. It is expected that the new building will be opened before next Christmas, though it is to be a very large structure, combining all the recent improvements. Especial attention will be paid to ventilation and to the comfort of the audience; for, though the theatre will be a large one, it is only intended to seat 1,500 persons. The building is to be called the Alexandra Theatre and Opera-House.

NEW METHOD OF ILLUMINATION.—M. Subra, professor of mathematics, says the *American Gas-Light Journal*, has invented a new method of illumination, or rather a method of inverting a flame, by the adoption of which several advantages are expected to be realized. The apparatus consists of a syphon of glass, the open ends of which are turned upwards; a burner is placed just within the shorter branch. Before lighting the lamp, the longer branch of the syphon is heated, and a current of air established, which carries with it any flame placed at the open end of the shorter branch, the flame, consequently, becoming inverted. As soon as the current is established, and the burner kindled, the heating of the longer leg may be discontinued; the current, once established, being sustained by the heat from the inverted flame. Thus, the supports of the globes or lamp-glasses are placed above the flame, and do not intercept the light; and the reflectors are in no danger of becoming blackened by smoke. The products of combustion, too, are collected in the syphon, and may be conveyed away, instead of vitiating the air of the apartment. It is proposed to employ these reversed flames as foot-lights for theatres.

OPENING OF NEW CUSTOM HOUSE, SOUTH SHIELDS.—The new Custom-house buildings, South Shields, have been formally opened by the members of the corporation and the River Tyne commissioners. The buildings, which are of the Italian order of architecture, stand on the quay at the Mill Dam, and command an extensive view of the River Tyne, both up and down. The façade next the river is composed of eight Corinthian columns (coupled), standing upon a rusticated basement of piers and arches, forming an arcade. The four centre columns are surmounted by a pediment, in which are placed the Royal arms. The borough arms are likewise placed over the centre arch of the arcade. The flank and back elevations are of a somewhat plainer character. The main cornice and principal string-courses are continued all round, with rusticated basement story in keeping with arcade and moulded quoins at the angles, the whole surmounted by a parapet. The shipping-office is on the ground-floor, and comprises shipping-master's office, 20 ft. by 16 ft.; waiting-room, 20 ft. by 15 ft.; general shipping-office, 26 ft. by 20 ft. The entrance or vestibule to shipping-office is paved with Caithness flags. There is also on the ground-floor a large bonding warehouse, with other rooms. The first floor is set apart for the Custom-house, the entrance to which is by a vestibule 34 ft. in length, and paved with tesselated flags. The Custom-house comprises private office, 20 ft. by 17 ft.; general office, 23 ft. 6 in. by 20 ft.; locker's room, 12 ft. by 13 ft. 6 in.; waiting-room and small office, 20 ft. by 13 ft. 6 in. On this floor also is the Marine Board-room, 25 ft. by 20 ft. The cost of the building is, we understand, 3,000*l.* Mr. T. M. Clemence, the borough surveyor, was the architect, under whose superintendence the buildings were carried out by Messrs. Scott & Suddards, of South Shields, builders.

THE ANTHROPOGLOSSOS. — If this so-called singing-machine had been restricted to a simple song or so, we might have listened quietly, and wondered whether or not we were being deceived; but, singing, as it does, all sorts of songs, and any that may be given to the owner a few hours beforehand, we have no doubt on the subject. How the imposition is managed, unless, indeed, some poor dwarf is actually boxed up in the suspended head, is not obvious; but imposition it must be. This need not prevent people from going to see it,—the question being, how is the affair managed? If, however, it *should* resolve itself into the confinement of a human being within the waxen *caput*, the proprietors should at once be prosecuted for cruelty.

STAINED GLASS COMPETITION.—The Art Department is seeking to obtain for the South Kensington Museum a design for a stained glass window, 18 ft. 9 in. high to the crown of a semicircular arch, by 11 ft. wide. The subject is furnished by the thirty-eighth chapter of Ecclesiasticus. The design is to be on the scale of one inch to the foot, and coloured, and it is to be accompanied by a full-size cartoon of a sufficient portion to show the execution, and a specimen of a portion of the design executed in glass, of the full size, 40*l.* will be awarded for the design which appears to be most suitable, and a sum of 20*l.* for the next best design. The designs to which the prizes are awarded will become the property of the Department, which however does not bind itself to execute either of them. The inducement seems to us scarcely strong enough to insure a good result.

THE COPPER TRADE.—The past fortnight, says a Liverpool report, has been characterised by an active and also speculative demand for both English and foreign copper; and though the smelters have not officially advanced their prices, they have been able to sell pretty freely at 3*l.* advance: 5*l.* are now generally asked. Chili bars have advanced to 89*l.* and 90*l.*, and there is very little Chili ore and regulus to be got under 18s. per unit. This change has been produced by the feeling on the part of consumers that copper had reached a price when it was desirable to go pretty freely into stock. In the first five months of the current year the imports of copper ore and regulus have been 36,733 tons, against 42,827 tons in the corresponding period of 1863, and 47,926 tons in the corresponding period of 1862. The value of the copper ore and regulus imported has been as follows since 1853:—1854, 1,236,132*l.*; 1855, 1,433,693*l.*; 1856, 1,929,683*l.*; 1857, 2,157,558*l.*; 1858, 2,138,880*l.*; 1859, 1,812,023*l.*; 1860, 2,211,558*l.*; 1861, 2,008,246*l.*; 1862, 2,631,056*l.*; and 1863, 2,000,473*l.*

ANCIENT BUDDHIST REMAINS.—An interesting collection of ancient Buddhist remains, discovered by Mr. E. Harris at Sultangunge, on the Ganges, while engaged in some engineering operations, has just arrived in England. Among the objects of interest discovered in the ruins excavated (supposed to be a vihár, or Buddhist monastery) is a colossal image of copper, 7 ft. 6 in. in height, weighing upwards of a ton, and supposed to be more than 2,000 years old. There are also several smaller figures, both in stone and in copper, and some baked clay slabs thickly covered with writing, &c., reminding one of the ancient Assyrian practice. The collection is at present placed in the museum of the Royal Asiatic Society, where plans and sections of the excavations have also been deposited.

LINCOLN ARCHITECTURAL SOCIETY.—The annual meeting was held at Nottingham. The proceedings commenced at St. Mary's Church, with divine service, at which the Rev. Canon Brooks officiated. The choir sang a full service, after which the Rev. Prebendary Trollope, the general secretary of the society, delivered an address on the fabric. The members then proceeded to the castle, where the Bishop of Lincoln took the chair, and the mayor and corporation presented an address of welcome. A paper on the subject of "Nottingham Castle" was read by Mr. T. C. Hine, the honorary local secretary. An excursion was then made to Wollaton Hall; and there was an evening meeting, under the presidency of the Bishop of Lincoln, at the Exchange Hall, where the Rev. Prebendary Trollope read a paper on "The Raising of the Royal Standard of War at Nottingham, by King Charles I.;" and other proceedings took place. A collection of paintings and engravings was exhibited in the Exchange Hall, for the purpose of illustrating the Caroline Civil War, which formally commenced at Nottingham.

NORFOLK AND NORWICH ARCHÆOLOGICAL SOCIETY.—The members of this society have just taken their annual excursion. They met at Little Walsingham, and visited Great Walsingham, where a short stay was made, and Mr. L'Estrange read a few explanatory and historical notes on the church. Some little delay was occasioned owing to the keys of the church not being at hand when the party arrived; and this was the case at several other places visited, although a previous intimation of the visit and the time had been forwarded to the different clergymen. Other places visited were Wighton, Burnham Thorpe (the birthplace of Lord Nelson), Burnham Ulph, Burnham Norton (where a paper was read by the Rev. G. W. Minns on the church, &c., and on the priory ruins and the Lady's Well), and North Creake Abbey, the ruins of which were found to be in apparently the last stage of decomposition, huge timber props being necessary to prevent the chief portion from falling down. Here Mr. Carthew read a short paper, and it was agreed that photographs of the ruins should be engraved and published in the Society's journal. The party closed the day and the meeting by returning to Walsingham.

THE LEICESTERSHIRE ARCHITECTURAL SOCIETY. This society, under the patronage of the Lord-Lieutenant of the county and the Lord Bishop of the diocese, held its tenth general annual meeting at Hinckley, on Tuesday in last week. The members and friends of the society assembled in the Corn Exchange, and, after an address from the Rev. Wm. Skirrow, the vicar, as chairman of the local committee, walked in procession to the church, where, after prayers and a voluntary upon the organ, Mr. Bloxam proceeded to point out the architectural features of the structure. From the church the party proceeded to the site of the old castle. At thé Corn Exchange in the evening papers were read by Mr. Bloxam, on Merevale Abbey; Ancient Hinckley, by Mr. J. Thompson; and Notes upon Ancient Hosiery, by Mr. T. North, for Mr. J. G. Nichols. On Wednesday morning the visitors went to Mancetter (Lord Curzon's), Merevale (Mr. C. Dugdale's), lunched at Atherstone, and thence went to Sheepy, Orton-on-the-Hill, Troycross, and Gopsall Hall. The meetings and Museum were crowded to excess throughout Tuesday. The Museum, arranged for the occasion, contained a great variety of architectural and antiquarian objects of interest.

TENDERS.

For new wash-house, laundry, &c., at Clerkenwell Workhouse. Mr. W. P. Griffith, architect:—

Gribble	£1,093 0 0
Ramsay	788 16 0
Hall	726 0 0
Yardley (accepted)	699 10 0
Fowler	680 0 0
Terrey	645 0 0

For editors' rooms, Chapterhouse-court, for Religious Tract Society. Mr. W. P. Griffith, architect:—

Ebbage (accepted)	£440 8 9

For new malting, brewery, and beer cellars for Mr. Thomas Crane, Leicester, exclusive of bricks. Mr. Francis E. Drake, architect. Quantities supplied:—

Glover	£455 0 0
Flude	410 0 0
Clifton	407 0 0
Chambers	400 0 0
Bent	365 0 0
Wall & Lee	345 0 0

For the erection of a billiard-room and other offices at Frensham Hall, for Mr. Charles E. Taylor. Messrs. Eggar & Stapley, architects:—

Birch	£475 0 0

For the erection of a villa residence, at Boundstone, near Farnham, for Messrs. J. & S. Fishwick. Messrs. Eggar & Stapley, architects:—

Birch	£2,335 0 0

For three houses at Camberwell. Mr. W. Berriman, architect:—

Marsland & Son	£4,830 0 0
Colls & Son	4,825 0 0
Macey	4,645 0 0
Gammon	4,560 0 0
Tarrant	4,500 0 0
Westropp	4,485 0 0
Thompson	4,435 0 0
Dennis	4,375 0 0
Wills	4,193 0 0
Henshaw	4,138 0 0

Accepted for the restoration of the parish church at Cossington, in the county of Leicester. Messrs. Goddard & Son, architects:—

For stone-mason's, bricklayer's, slater's, and plasterer's work.

Firn	£669 0 0

For carpenter's, joiner's, and ironfounder's work.

Loveday	575 0 0

For plumber and glazier's work.

Hill	55 0 0

For raising Hare-court Chapel, Aldersgate-street. Mr. W. P. Griffith, architect:—

Ebbage (accepted)	£480 0 0

For additions to a house at Upper Norwood. Mr. Sextus Dyball, architect:—

Seymour (accepted)	£508 0 0

For cellars to No. 2, Church-road, Upper Norwood. Mr. S. Dyball, architect:—

Seymour (accepted)	£350 0 0

For alterations and additions to buildings, at Sydenham, for the Sydenham Laundry Company. Mr. S. Dyball, architect. Quantities by Mr. F. Chadwick:—

Seymour	£1,405 0 0
Sims & Marten	1,320 0 0
Buck	1,270 0 0
Littlejohn	1,100 0 0
King, Hipwell, & Co.*	1,047 0 0

* Accepted.

For a pair of houses to be built at Wandsworth. Mr. G. H. Page, architect:—

Bass	£1,150 0 0
Adamson & Sons	885 0 0
Brighten	875 0 0

For house to be built at St. John's Hill, Battersea-rise, Mr. G. H. Page, architect:—

Bass (accepted)	£1,550 0 0

For additions to the Strand Union schools, Edmonton. Mr. W. Lee, architect. Quantities supplied by Messrs. Linsdell & Giffard:—

Cannon	£4,980 0 0
Fish	4,975 0 0
Howard	4,975 0 0
Hall	4,815 0 0

AN Architect is desirous of RECEIVING into his Office a YOUNG GENTLEMAN as IMPROVER.—Apply to E. B. care of S. Hounsell, esq. Solicitor, 3, Furnival's Inn, London.

A BURNER of PORTLAND CEMENT KILNS, WANTED.—Apply, by letter, giving references as to character, particulars of experience, and terms required, to HOOPER & ASHBY, Southampton.

BOROUGH of LIVERPOOL.—To ARCHITECTS and SURVEYORS.—The Town Council of the Borough of Liverpool desire to engage the services of a competent person to act as SURVEYOR of their Estates, and as ARCHITECT in the erection of any buildings required by them. An outline of the principal duties required will be forwarded on written application, addressed to the Town Clerk, Town hall, Liverpool. The gentleman appointed must be experienced in his profession, and not more than forty years of age, and he will be required to abstain from all private practice, and to devote his whole time and attention to the business of the Corporation. The salary will be £600, per annum; and suitable offices, with a competent staff of clerks, and all stationery, &c. will be provided by the Town Council. Applications, with testimonials, sealed, and marked by James Dafforne, "for Office of Surveyor," and addressed to "The Chairman of the Real Estate Sub-committee, Town Hall, Liverpool," will be received at the Office of the Town Clerk of Liverpool, up to NOON, on THURSDAY, the 11th day of AUGUST next, but no later. Each application must give full particulars of the present and previous employment of the applicant, and state how soon, if appointed, he could enter upon the duties of the office. No recommendation of any applicant will be taken into consideration unless it be stated therein that the writer is personally acquainted with the individual recommended, and that such writer can, of his own knowledge, answer for the qualifications of the applicant. If the applicant, or any person recommending him, is not resident in Liverpool, a reference to a person of respectability and position in Liverpool, who is acquainted with the applicant or person so recommending, as the case may be, will be required. It is requested that no personal or written application may be made to any member of the Council in reference to this appointment. The gentleman appointed will have the benefit of conferring and advising, and will be expected to co-operate with the present Surveyor of the Corporation, who will continue his services as Consulting Surveyor.—By order,
WM SHUTTLEWORTH, Town Clerk.
Town Hall, Liverpool, July 15, 1864.

GOOD GLAZIERS WANTED.—Apply to WARD & HUGHES, 67, Frith-street, Soho-square.

LOCAL BOARD of HEALTH, KINGSTON-UPON-HULL.—To FOREMEN of ROADS.—The Local Board of Health for the district of Kingston-upon-Hull require the services of a STREET FOREMAN, and are prepared to receive applications from properly qualified persons. The situation will be held under the Surveyor, and the duties will consist in Superintending the Construction and Repairs of street surface Work, in Built, paved and macadamised roads; also the keeping of the usual foremen's accounts. The hours of service will be six a.m. to six p.m. and the wages 35s per week. Applications, stating age and previous employment, accompanied by references, are to be forwarded, under cover endorsed, "Street Foreman's application," to C. S. TODD, Esq. Clerk to the Local Board, 15, Bowlalley-lane, Hull, on or before THURSDAY, the 4th day of AUGUST, 1864.—By order,
J. FOX SHARP, Surveyor to the Local Board.
Surveyor's Office, Sculcoates Hall, Hull, 20th July, 1864.

REQUIRED, the assistance of a good DRAUGHTSMAN, for working drawings and Gothic details.—Apply, stating works recently engaged on, with testimonials and salary required, to Mr. F. BAINES, Architect, Ipswich.

TO ROAD SURVEYORS.—The Paving Committee of the Vestry of the Parish of St. Mary, Newington, Surrey, will meet at the VESTRY ROOM of the Parish Church, on MONDAY, the 8th day of AUGUST, at SEVEN o'clock in the evening precisely, to receive APPLICATIONS from CANDIDATES for the Office of SURVEYOR of ROADS for the before-mentioned parish, at a salary of £80 per annum and 30l. for the keep of a horse, subject to determination upon three months' previous notice, ending at any time. The person elected to the office will be required to devote the whole of his time thereto, to reside in the parish, and not to engage in any other occupation whatever. Any further information required may be obtained from the Clerks to the Vestry.—Applications, with testimonials, to be forwarded to the Clerks to the Vestry, before FOUR o'clock in the afternoon of the above mentioned day. Candidates will be informed when required to attend the Committee. NB None but those who have had experience in road making and repairing need apply.
H. & F. CHESTER, Clerks to the Vestry.
1, Church-row, Newington Butts.

TO SURVEYORS.—The Local Board of Health for the District of Penrith hereby give notice that, at their Meeting, to be holden on MONDAY, the 22nd day of AUGUST, 1864, they will proceed to the APPOINTMENT of a SURVEYOR and INSPECTOR of NUISANCES to the Board, who will be required to devote the whole of his time to the duties of the office, as given in the Board's Bye Laws, to the exclusion of any other employment whatever. The duties comprise the superintending of the Board's Waterworks, where a steam-engine and water power are used, the former as an auxiliary only; the maintenance of the streets of the town, and the highways of the rural districts, in all about 24 miles in length; preparing plans, specifications, and estimates of all works to be done under the direction of the Local Board, and superintending their execution; examining all plans of houses, streets, &c. submitted to the Board for approval, and advising thereon as to their structural arrangements and their conformity generally to the Board's Bye Laws; inspecting regularly the sanitary condition of the town; reporting thereon; keeping proper books and accounts; attending all Board and Committee meetings; and carrying out all orders given by the Board in connexion with the Surveyor's department. The person appointed will be required to enter upon his office on the 26th day of September next. The Local Board will be guided in their choice solely by the character and competency of the candidates, and canvassing the members is strictly prohibited. Applications, stating salary, accompanied by testimonials of recent date, to be addressed to me before the 15th of AUGUST. Office, with gas and coal, provided.
By order, CHRIS. FAIRER, Clerk to the Local Board.
Board Room, Penrith, July 14, 1864.

LARGE HOUSES are REQUIRED at WANSTEAD.—The Grove Estate is five minutes' walk from the station. Money and materials advanced.—THOMAS EDWARD KNIGHTLEY, Architect, 26, Cannon street, City. The Freehold may be purchased.

NEWLY and most substantially erected WAREHOUSES and LAND, occupying an area of nearly half an acre, near the entrance to the London Docks, well adapted for bonded warehouses, TO BE LET on LEASE, or the Freehold to be sold.—Apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

A FREEHOLD MANSION TO BE SOLD, The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 50 feet in length; eleven best bedrooms, stabling for eight horses and coachhouses for four carriages; suitable servants' offices; extensive ornamental grounds, with greenhouses, in all 28 acres; gravelly soil; near Sunninglake Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. BOWEN MAY, Esq. Solicitor, 67, Russell-square.

PORTLAND CEMENT WORKS.—TO BE LET, for a term of years, driven by steam and wind power, in complete repair, and in full work, and calculated to carry on a trade to any extent, being in the neighbourhood of an abundant supply of the best materials, with water carriage throughout Norfolk and Suffolk, and through Yarmouth, to all parts of the world. The Berney Arms Station is within five minutes' walk.—Apply to Mr. JAMES NESBIT, Morton, Norwich.

BUILDING GROUND.—TO BE LET from Michaelmas next, a valuable PLOT of GROUND, adjoining the Lea Bridge Railway Station, with a frontage of 800 feet to the Lea Bridge-road, the total area being five acres and a half.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

WATERSIDE PREMISES, City-road.—Messrs. FULLER & HORSEY are instructed to LET, on LEASE, from Michaelmas next, extensive WATERSIDE PREMISES, occupying a site of 21,000 superficial feet, situate on the Wenlock Basin, City-road, and comprising a spacious and substantial modern brick-built manufactory of two floors, engine and boiler-house, with 5-horse power steam engine and three Cornish boilers, range of brick-built offices, and paved yards with gateway entrances. There is a water frontage of about 207 feet.—For further particulars apply to Messrs FULLER & HORSEY, 13, Billiter-street, London, E.C.

PUTNEY.—To BUILDERS and OTHERS. Superior BUILDING LAND TO BE LET, on the Richmond-road, Putney, within 150 yards of the railway-station. Lease, 99 years. Ground-rent moderate. Liberal allowances made.—For plans, &c. apply to J. H. ROWLEY, Esq. Architect, 35, Poultry, E.C.

SANDOWN BAY, ISLE of WIGHT.—BUILDING LAND on long Lease, facing the magnificent bay, and opposite the proposed pier. The most eligible sites now to be had in this rapidly rising town. Apply to Mr. J. WITHERS, Timber Merchant, Sandown.

ARCHITECTURAL ENRICHMENTS, in Plaster, Cement, Papier maché, Composition, &c. Centre Flowers, Soffits, Trusses, and all kinds of Enrichments for Ceilings, Cornices, &c. new in design and moderate in price at G. GEORGI'S, MODELLER & SCAGLIOLA MANUFACTURER, BAKER'S-BUILDINGS, LIVERPOOL-STREET, BISHOPSGATE, E.C.

BUILDING LAND TO BE LET, situate at Vauxhall, Leytonstone, and Camberwell. For particulars apply to Messrs. DRIVER & CO. 4, Whitehall, London, S.W.

FREEHOLD LAND TO BE LET, on Building Leases, at low ground-rents, on the estate of the Carpenters' Company, at Stratford, Essex, close to the Station and the High-street; one portion with river frontage, for the erection of manufactories, and another for small houses or cottages.—For plans and particulars, apply at the Clerk's Office, Carpenters' Hall, London-wall.

FOREST HILL.—BUILDING LAND TO LET on this hill, commanding extensive views. — Apply to A. B. 192 Bermondsey-street, S.E.

NOTICE.—TWICKENHAM PARK, near RICHMOND.—Most Eligible BUILDING LAND TO LET on LEASE, for Ninety-nine Years, in Large or Small Plots. Money advanced if required.—For particulars, apply to W. BACKHURST, at the Estate Office, Twickenham Park: or to EDWARD GUILLAUME, Esq. 14, George street, Mansion House, London.

FREEHOLD LAND TO BE SOLD or LET on BUILDING LEASES, in Glengall-road, Old Kent-road.

AND ALSO near Forest-hill Station.

ALSO FREEHOLD WHARF on the Surrey Canal, near Old Kent-road.—Apply to Mr. MAY, Acorn Timber Wharf, Old Kent-road.

SURBITON.—TO BE LET, on Building Leases, LAND within five minutes' walk of the Station, and close to the River, for HOUSES of not less than 80l. a year rent. If desired, a portion of the money required will be advanced.—Inquire of Mr. MUDIE, Victoria terrace, Surbiton.

FREEHOLD BUILDING LAND TO BE LET, at Chislehurst, Kent, on long leases, at moderate ground-rents, suitable for villas, cottages, and shops. There being a great want of smaller dwellings, they would let immediately, and the sites offer a good investment. Also, LAND suitable for first-class residences, commanding magnificent views, all within easy access to rail for City and West-end. The situation is celebrated for pure air and water, is high and dry, rich soil, and not to be surpassed in picturesque beauty.—Apply to Mr. F. THORNE, 4, Corbett court, City; and Rose bank, Lee-road, Lee, S.E.

EXTENSIVE and valuable POTTERY WORKS TO BE LET, situate close to water and railway communication. The property consists of about 35 acres of land, nearly 5 acres of which are covered by buildings, which comprise two kilns for Bristol ware, seven for stoneware, and one dome kiln for red pottery, for which there is an extensive local demand; eighteen dwellings for the workmen, stabling for fourteen horses, sheds, warehouses, &c. &c. The certainty that many of the Lambeth Potteries must be closed by the Southern Embankment of the Thames, renders them a most desirable property.—Apply to Messrs. LEMAN, GROVER, & CO. 61, Lincoln's-inn fields; or Messrs. ROBINSON, HINE, & HAYCOCK, 49, Charterhouse-square

BUILDING GROUND, TO BE LET by TENDER.—High Road, Lewisham Land-tax redeemed. A PLOT of GROUND, sufficient for the erection of Four Houses fronting the High Road. Frontage about 88 feet; average depth 150 feet. Term of years 80. One year's peppercorn rent. Within three minutes' walk of the Lady Well Station.—Sealed Tenders, stating amount of ground-rent, description and value of each house, to be delivered on or before the 31st day of AUGUST, 1864, at Leathersellers' Hall, St Helen's-place, E.C.

TO BUILDERS and OTHERS.—TO BE SOLD, a small FREEHOLD PROPERTY, situated in the centre of a town in one of the best situations in Hertfordshire, near a station on the Great Northern line.—For particulars, apply, by letter, to E. A. care of Mr. Isaac, Leyton-green, Essex, N.E.

TO BE LET, Large and Valuable PREMISES, with water communication, one mile north from the Bank. Formerly occupied by a mahogany merchant, who realized a large fortune there.—Apply to E. & W. STURGE, Bridge Wharf, City-road, E.C.

FREEHOLD ESTATE of 450 ACRES, with Cottage Ornée, and extensive Out-buildings, 23 miles S.W. London, three from two stations, another shortly within one mile, two thousand feet frontage on the turnpike road, with beautiful sites for villas, gravel and building stone in abundance. Price only three fourths on mortgage at 4½ per cent.—Apply to Messrs. Sole, 39, Rolls Chambers, 89, Chancery-lane, W.C.

FREEHOLD BUILDERS.—LAND TO BE LET, on Building Leases, in Lyndhurst-road and Denman-road, Peckham; where a station will shortly be opened.—Apply to Mr. SPRIGGS, 7, QUEEN TO TWELVE only, or by letter at S. W. Johnson's, No. 5, Cranbourn square.

PATENT and BRITISH PLATE GLASS.—JAMES HETLEY & CO. beg to inform Architects, Builders, and the Trade generally, that their new Tariff of Prices for the above is now sent on application; they will also, on receipt of particulars, send estimates for any description of Glass now manufactured.—Rough Plate, Sheet, Crown, and Ornamental Window Glass Warehouse, 33, Soho-square, London.

Can be seen in the Constructional Department, KENSINGTON MUSEUM.
R. LANGLEY, Agent.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of
Medina.
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

NEW STOCK NOW READY.
FINE WHITE BRICKS.

INTERNATIONAL EXHIBITION, 1862

CLASS 35, No. 6849.

3s. 9d.

The ONLY MEDAL "fo STONEWARE" has been awarded to DOULTON & WATTS LAMBETH POTTERY, LONDON.

In expectation of a greatly increased sale, D & W. have determined to introduce the annexed pattern of their ENA MELLED STONEWARE CLOSET PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

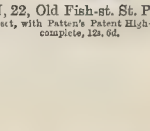
READE & HEWITT'S PATENT PNEU

MATIC PAN and SELF ACTING WATER CLOSETS, RAIL WAY URINAL, and SEWER FLUSHING APPARATUS.

The simplest, strongest, and cheapest Closets manufactured, acting efficiently with or without Supply Cistern, and at high or low pressure. Specially adapted for railway stations, offices, public buildings, workshops, and any situations where subjected to severe usage. Prevents waste of water, saves piping, cranks, wires, service-box, and all the complicated apparatus of self-acting closets.

The Self acting Pneumatic Flushing Vessel flushes ranges of urinals regularly at intervals, the time between the discharges being regulated by a simple tap, thus saving an immense quantity of water, which ordinarily runs to waste.

Best Pan Closet, complete	£2 12 6
Best Self-acting Closet, complete	2 15 0
Railway Urinal Flushing Vessel, complete	3 3 0



LIVERPOOL, No. 5, WELLINGTON BUILDINGS, SOUTH CASTLE STREET.

An Agent is required for the sale of the above in London.

PAN CLOSET,

and HYDRAULIC REGULATOR.

COMPLETE, 1l. 18s.

Dispensing with Cranks, Wires, Rod, Lever, Service-box, &c.

Any number can be supplied from one pipe.

W. PATTEN, 22, Old Fish-st. St. Paul's, London.
A Cottage Closet, with Patten's Patent High-pressure Valve, complete, 12s. 6d.

IMPROVED REVOLVING SHUTTERS.
MARTIN & CO.

respectfully invite the attention of Architects, Builders, and the Public to their superior IRON or WOOD REVOLVING SHUTTERS.

Wood Revolving Shutters, with all requisite gearing complete, from 2s. per foot super. Iron from 2s. 6d., with all requisite gearing complete, suitable for Banking Houses, Shop Fronts, Public Buildings, and Private Houses. Brass Drawn Sash Bars and Brass Stall Plates at considerably reduced prices for best quality only.

ILLUSTRATED PROSPECTUS ON APPLICATION TO MARTIN & CO., 200, HIGH HOLBORN, W.C.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS. Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. heavier and under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

NEW TARIFF FOR JUNE, 1864.

TO BUILDERS, CONTRACTORS, AND ENGINEERS.

PORTLAND, ROMAN, and PLASTER CEMENT MANUFACTURERS,
STROOD DOCKS, on the River Medway, KENT.
MESSRS. LARK & PARROCK,
late Lark, Fletcher, & Co. are prepared to supply their Cements, of the best quality and on the most advantageous terms, either for concreting, brickwork, or for tidal works, or otherwise, and for home and foreign trade, either direct from the Manufactory, or at the WHITE LION WHARF, BANKSIDE, LONDON.
N.B.—Shipping merchants for the foreign trade treated with on the most advantageous terms. Ships of any size loaded afloat and alongside. HYDRAULIC LIME MANUFACTURERS OF THE BEST QUALITY.

PURE HYDRAULIC LIME, Manufactured from the best HALKIN MOUNTAIN LIMESTONE, same as supplied for the construction of the Liverpool and Birkenhead Docks. The HOLYWELL LIMESTONE COMPANY are prepared to deliver the above, in lump or ground, packed in bags, into waggons, at the Holywell Station of the Chester and Holyhead Railway, or on board vessels at Greenfield Wharf, Chester River.
Prices and particulars furnished on application to Mr. EVAN EVANS, Manager, Pary's Mine Works, Holywell, Flintshire.
The Company guarantee the quality of the Lime to be equal to that used by the Engineer of the Liverpool and Birkenhead Docks.
Agents Wanted. No applications attended to without a banker's reference.

BURHAM BRICK, LIME, and CEMENT COMPANY, BURHAM WHARF, BELVIDERE-ROAD, LAMBETH.—The public are informed that the Company have taken the above Premises, and have ON SALE, GAULT BRICKS, TILES, POTTERY, DRAIN-PIPES, GREY STONE LIME, PORTLAND and other CEMENTS, and BUILDING MATERIALS of all descriptions. Architects and Builders are respectfully informed that goods of any pattern or design can be manufactured at the Company's Works, erected on the banks of the Medway by the late Thomas Cubitt. They would also call the attention of the public to the very superior quality of their Portland Cement.

PARIAN CEMENT for INSIDE WORK. With this Material Houses may be finished and occupied in one-fourth the usual time, as Parian Stucco may be painted or papered within forty-eight hours. A finer quality produces a beautiful and hard scagliola imitation of marble.—Manufacturers, FRANCIS, BROTHERS, & POTT, Nine Elms, London.

GEORGE ELL & CO.
EUSTON WORKS, 366 and 368, EUSTON ROAD, LONDON, N.W.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathe-straps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union-joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Tailbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

TO CONTRACTORS, QUARRY OWNERS, MINERS, &c.
BLAKE'S STONE BREAKER is recommended by the best Engineers in this and other countries to Break Stone of every description, of the best quality for Macadam Roads, Concrete, Ballasting Railways, &c. It takes in large blocks or round boulders, and reduces them to fine road metal, at a cost of from 2d. to 3d. per ton. If your pauper labourer costs 3s. per day, this machine will do more work, and do it better, at 3d.—For circular testimonials, &c. apply to
H. R. MARSDEN,
SOHO FOUNDRY, LEEDS.

LITTLE CASTERTON FREESTONE.
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD,
The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE is used largely by London Builders.

MONEY.—IMMEDIATE CASH ADVANCES on FREEHOLD and LEASEHOLD PROPERTY, REVERSIONS and ANNUITIES,
WINE, SPIRIT, and TIMBER WARRANTS,
FURNITURE, SHARES, &c.

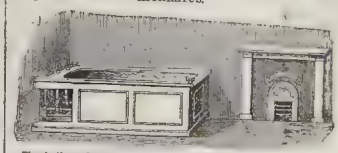
CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's  Royal Letters Patent.

McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.
...by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it ...been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal ...cultural Society's House in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, ..., and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE ...NNY PER SQUARE FOOT. Samples, with full directions as to its uses, and the manner of applying it, with TESTIMONIALS, some of ... of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of ...gdom, or country. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel ...ected. The TRADE are respectfully requested to send their orders DIRECT to the FACTORY, as the surest means of being supplied with ...od stock, and in lengths best suited to their roofs. The original works where the above roofing is made are P. McNEILL & CO.'S Manu...ories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, ...GRAUH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, ...early One Million Feet. A Liberal Discount allowed to the Trade.

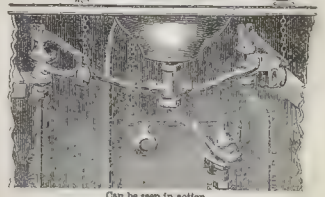
CHEAP, LIGHT, AND DURABLE ROOFING.
CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.
...let. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half ...umber usually required.—4th. It can be easily applied by any unpractised person.—5th From its lightness, weighing only about 42 lbs. to ...square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.
INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.
DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.
Samples, testimonials, and full instructions, on application to
CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.



J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve.

Pan.



The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No cistern-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick lane, Newgate-street, London.

J. TYLOR & SONS' PATENT BATH APPARATUS.

MESSRS. PULLEN, HORNE, & EVERSFIELD respectfully announce that they are instructed by the Markets Improvement Committee of the Corporation of the City of London to SELL by AUCTION, on the PREMISES, on FRIDAY, AUGUST 5, and following day, at TWELVE, in lots, all the VALUABLE BUILDING MATERIALS of several Houses, Warehouses, and Premises, situate on the north side of Smithfield, West street, Durham yard, and Greenhill's rents, comprising excellent stock bricks, oak and fir timber in roofs and floors, Flats and pan tiles and slates, glazed sashes, doors, chimney pieces, and interior fittings, flooring boards, folding gates, paper, lath, and plaster, iron columns, girders, cisterns, water-tanks, &c.; a mason's cart on springs, a town cart, and other effects. May be viewed on Saturday previous and morning of sale, and catalogues had at the Place of Sale; and of PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, Westminster, and 81, Fore-street, E.C.

CHANCERY-LANE Building Materials of Ten large Houses.

MESSRS. PULLEN, HORNE, & EVERSFIELD are instructed by the Directors of the Public Chambers Company, Limited, to SELL by AUCTION, on the PREMISES on WEDNESDAY, AUGUST 17, at TWELVE, the MATERIALS and FITTINGS of TEN LARGE HOUSES, being Nos. 39, 40, and 41, Chancery-lane, and Nos. 1 to 7, Cursitor-street, comprising a large quantity of sound timber in roofs and floors, floor boards, part tiles, doors, sashes, and other fittings, stoves, ranges, iron railing, tiles and slates, stone coping, several tons of lead, and other materials. May be viewed one week previously, and catalogues had at the Architects' Office, Guildhall; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

Second Portion of the Surplus Property of the London, Chatham, and Dover Railway Metropolitan Extension Lines.—For SALE by AUCTION, by

MR. VIGERS, at GARRAWAY'S COFFEE-HOUSE, Change-alley, Cornhill, on THURSDAY, AUGUST 4, at TWELVE for ONE, in fourteen lots, by order of the Directors, SIXTEEN FREEHOLD HOUSES and SHOPS, FIVE LEASEHOLD COTTAGES, and FOUR PLOTS of FREEHOLD BUILDING LAND, ready, or in superior rental of 850*l.* per annum.—A Plot of Freehold Building Land at Pence; a detached Residence, known as the Eagle House, and two Freehold Houses and Shops, in Cold Harbour-lane, Brixton; Freehold Fee Residence, No. 78, Old, 82, and 90, Camberwell-road; two Freehold Messuages, Nos. 47, Carter-street, and 1, West street, Walworth; a capital Messuage at Shop, No. 9, Crown-street, Walworth-road; a valuable Plot of Building Land, with frontage on Newington-causeway, and five Leasehold Cottages in Tiverton-street, Newington; four Freehold Houses and Shops, Nos. 2, 3, 6, and 11, Upper Brixton-place, Brixton, and a Plot of Building Land adjoining; and a valuable corner Plot of Building Land at the Clock Inn road, adjoining a first-class station on the London, Chatham, and Dover Railway. The property may be viewed by persons on the tenants', and particulars and conditions of sale may be had of Messrs. FRESHFIELDS & NEWMAN, Solicitors, 9, Bank Buildings, and of GARRAWAY'S Auction & Estate Exchange, Change-alley, Cornhill; and of Mr. VIGERS, Land Agent and Surveyor, 3, Frederick's-place, Old Jewry.

TO BE SOLD, pursuant to a decree of the High Court of Chancery, made in a cause of "John Merryman against William Wolfe Bankes and others," with the approbation of the Vice-Chancellor, Sir R. T. Kindersley, the Judge to whose court this cause is attached, by

MESSRS. PRICE & CLARK, the persons appointed by the said Judge, at GARRAWAY'S COFFEE-HOUSE, Change-alley, Cornhill, in the City of London, on FRIDAY, the 5th day of AUGUST, 1864, at TWELVE for ONE o'clock in the afternoon, in three Lots, certain FREEHOLD PREMISES, situate in Garrett-lane, Wandsworth-road, Surrey, formerly known as Athorp Lodge, but now called the Duke of Wellington Inn, having extensive frontage to the high road leading from Wandsworth to Tooting, will expire on St. Michael's Day, 1877, and is let to Messrs. Combe, and a meadow land, the whole containing about 3a. acres, or thereabouts, and possessing an extensive well; subject to a lease thereof for about forty-two years from the 25th of December, 1861, at 14*l.* per annum, also, Freehold Ground rents, amounting to 30*l.* 5*s.* per annum, secured on nine dwelling-houses (one with shop) being Nos. 8, 9, 10, and 12, Edward-place, Garrett-lane aforesaid, and also a Freehold Piece of Land situate in Garrett-lane aforesaid, and adjoining the premises before mentioned, having a frontage to the said high road of 122 feet 6 inches and a depth of 70 feet 9 inches, let and for the building purposes. Particulars and a plan of the estate may be had, gratis, of Mr. H. MERRIMAN, Solicitor, 1, Mitre-court, Temple, E.C.; of Mr. WM. WILKS, Solicitor, 3, New Inn, Strand; of Mr. HENRY PARRIS, Solicitor, 34A, Moorgate-street; Mr. DAVID ASTON, Solicitor, 108, Lewin-road, W.; Mr. R. GIBBS, Solicitor, 15, Poultry; and of the Auctioneers, 24, Chancery-lane, W.C.

J. A. BUCKLEY, Chief Clerk.

TO TIMBER MERCHANTS, BUILDERS, CABINET MAKERS, AND OTHERS.

MR. THOMAS ROBERTS & CO. will SELL by AUCTION, on the PREMISES, Letts's Wharf, Commercial-road, Peckham, on WEDNESDAY, AUGUST 10, and following day, at ELEVEN o'clock precisely, the extensive and well-seasoned STOCK, consisting of 150 loads of Spanish, and Honduras mahogany, dry larch, waiscoting, Baltic timber, &c., about 100 loads of dry Memel and Yank, and several thousand feet of well-planed boards. &c.—To be viewed one day prior and morning of sale. Catalogues to be had at the place of sale and of the Auctioneers, 3, Billiter-street, E.C.

FREEHOLD BUILDING PLOT, HACKNEY, suitable for two good Shops, with dwelling-houses over, to Mare-street, Hackney, adjoining the Morning Herald Office, with a depth of 70 feet 9 inches, abutting for the building purposes on Parish-street and Cecil-street.

MESSRS. TEBB, BROTHERS, will SELL the above, at GARRAWAY'S, Cornhill, on FRIDAY, AUGUST 5, at ONE o'clock.—Particulars of WHITER, Esq., Basinghall-street, Clerk at Garraway's; and of the Auctioneers, 3, Adelaide-place, London Bridge, E.C.

LEYTONSTONE, Second Portion of Estate, comprising Forty Plots of Freehold Building Land.

MR. JOHN M. DEAN will SELL by AUCTION, at the Plough and Harrow Tavern, Leytonstone, on THURSDAY, AUGUST 4, at THREE o'clock, in forty lots, a FREEHOLD ESTATE, admirably adapted for building purposes, FORTY PLOTS of eligible BUILDING GROUND, situate at Harrow Green on the high road from Stratford to Leytonstone, within a short distance of the Leyton Railway Station, having extensive frontages on roads leading out of the Leytonstone high road. The land is high and dry, with a gravelly subsoil, and in part ready eligible for the erection of detached and semi-detached residences.—May be viewed, and particulars and conditions of sale, with plans, had of Messrs GLYNES & SON, Solicitors, 9, George-yard, Lombard-street; at the Plough and Harrow Inn, Leytonstone, and of Mr JOHN M. DEAN, Auctioneer and Surveyor, The Grove, Stratford, E.

WOOD GREEN.—To Builders and Others.—Six Houses in Carcase.

MESSRS. DEBENHAM & TEWSON will SELL (by order of the Mortgagee), at the GUILDHALL COFFEE-HOUSE, near Guildhall, on THURSDAY, AUGUST 11, at ONE punctually, in one lot, the CARCASES of SIX DWELLING HOUSES, pleasantly situate in the Hornsey-road, London-lane, near the Jolly Butchers, Wood-green common, about half a mile from the Wood-green Station. Each house stands on a plot of ground 126 feet in length, is roofed in, has the joists laid, is planned to contain six rooms, and moderately estimated to produce 26*l.* a-year when finished. Lease, direct from freeholder, for a long term, at a moderate ground rent.—Particulars of THOMAS ASH, Esq. Solicitor, 4, Lothbury; and of the Auctioneers, 80, Cheapside.

UPPER TEDDINGTON, about 61 acres of Freehold Building Land, overlooking Bushey Park, less than a mile from the Teddington Station, on the new Kingston line, and about five minutes' walk from the Hampton Station, on the Thames Valley line, which is now nearly completed.

MESSRS. DEBENHAM & TEWSON will SELL, at the GUILDHALL COFFEE-HOUSE, near Guildhall, on THURSDAY, AUGUST 25, at THREE punctually, in several lots, about 61 ACRES of valuable FREEHOLD BUILDING LAND (unredeemed), part in the parish of Hampton, and part in Upper Teddington very eligibly situate fronting the high road from Teddington to Hampton, and overlooking Bushey Park in the rear. The land is high, the soil is a deep gravel, spring water can be obtained at a moderate depth, water and gas services are laid along the road, and the land offers most eligible sites for the erection of villas or cottage residences, the demand for which in the neighbourhood is almost unlimited.—Particulars, with plans, shortly of Mr. WALKER, Surveyor, Hampton-wick; of G. E. GUSTARD, Esq. Solicitor, No. 51, Lincoln's-inn-fields, and of the Auctioneers, 80, Cheapside.

UPPER KENNINGTON LANE, VAUXHALL.—Freehold Residences and Building Land, being Nos. 11 and 12, Kennington-lane, Upper Kennington-lane, with orchard and garden ground adjoining, present long eligible sites for the erection of shops, dwelling houses, or manufacturing premises.

MESSRS. DRIVER & CO. are instructed to SELL by AUCTION, on THURSDAY, AUGUST 25th, in two lots, the above desirable FREEHOLD PROPERTY, most advantageously situate, and well adapted for building purposes. Particulars and plans may be had at the inns in the neighbourhood; of Messrs. SHUM & CROSSMAN, Solicitors, 3, King's-road, Bedford-row, and of Messrs DRIVER & CO. Surveyors, Land Agents and Auctioneers, 4, Whitehall, London, S.W.

CASTLE-STREET, SOUTHWARK.—Valuable Estate (nearly equal to Freehold) near the new and important thoroughfare called Southwark street, being the main road from Westminster to London Bridge completed, and largely improved by the Metropolitan and premises forming Nos. 50, 51, 52, and part of 53, Castle street, Southwark Bridge road, having a frontage of 73 feet to Castle street, and extending a ground area of about 14,200 feet, or nearly the third of an acre.

MESSRS. DRIVER & CO. will SELL by AUCTION, at the GUILDHALL COFFEE-HOUSE, City, on THURSDAY, the 25th day of AUGUST, at ONE precisely, in one lot (unless the same be previously disposed of by private contract), the above valuable ESTATE, which, on account of its extensive area, contiguity to water-carriage, railway stations, and well-known leading thoroughfares, presents a very desirable site for the erection of manufactories or other commercial buildings. The valuable property may be considered equal to freehold, being held under a lease granted by the Bishop of Winchester's lessee for a term of 61 years from the 6th of April, 1820, on three lives aged respectively 70, 68, and 150 years, or the survivor of them, at the very moderate ground rent of 14*l.* per annum, and arrangements have been made by the tenants with the freeholders (the Ecclesiastical Commissioners of England), whereby the fee can be obtained by the purchaser on completion of the purchase.—Particulars may be had (free from the usual charges) at the Guildhall Coffee-house, at the Estate Exchange, Change-alley, Cornhill; of Messrs. BENNETT, DAWSON, & THORNHILL, Solicitors, 5, New-inn, Lincoln's-inn-fields; of Messrs. RANDALL, HARRIS, & RANDALL, Solicitors, King's Bench-walk, Temple, and of Messrs DRIVER & CO. Surveyors, Land Agents, and Auctioneers, 4, Whitehall, London, S.W.

UPPER TOOTING, near Balham and Wandsworth Common, Surrey. Valuable Freehold Property; comprising a detached Residence, with Offices, Gardens, and Paddock, well adapted for building purposes.

MESSRS. NORTON, HOGGART, & TRIST have received instructions from the Executors of the late Mr. Mortimer, Esq. to offer for SALE, at the Guildhall Coffee House, on WEDNESDAY, the 17th day of AUGUST, 1864, at ONE precisely (unless previously disposed of by private contract), a valuable FREEHOLD RESIDENCE, known as Warren House, for many years in the occupation of the late owner, pleasantly situate adjoining the property of — Bell, Esq. at Upper Tooting, in the parish of Streatham, Surrey, about a mile from the Balham Station on the Brighton Railway, and within an hour's access of all parts of the metropolis. It is detached and approached from the high road by a carriage drive through a lawn, and contains sufficient accommodation for a moderate-sized family, with stabling, offices, and yards, very productive kitchen gardens, with an abundance of fruit trees in full bearing, and rich pasture, extending to the private road in the rear, leading to Wandsworth Common; the whole containing about four acres. A more detailed advertisement will appear shortly, when particulars may be had of JOHN MORTIMER, Esq. Solicitor, 17, Clifford's-inn, W.C.; at the Guildhall Coffee House, and of Messrs NORTON, HOGGART, & TRIST, No. 62, Old Broad street, E.C.

ON MONDAY, AUGUST 8, at TWELVE for ONE.—Contractors' and Builders' Stock

MESSRS. LEREW & LEREW will SELL by AUCTION, on the PREMISES Camden-terrace, Camden-town, the STOCK, consisting 1,200 yellow, white, and pine planks, deals and battens, 400 pine scantling, 3,000 feet run of pine, 130 squares flooring (yellow and white), 3,500 feet white pine board, 1400 feet quartering, mahogany, birch, doors, fifteen ladders, forty scaffold poles, slates, plain tiles, three loads plaster, stove-pipes, and useful building materials.—Auction Offices, 2, Cardington street, Hampstead road.

To Contractors and Manufacturers requiring good Stabling

CLERKENWELL.—Capital Stabling for Sale.

MESSRS. J. J. CLEMMANS & SON will SELL by AUCTION, at GARRAWAY'S, on WEDNESDAY, AUGUST 3, at TWELVE, a capital LEASEHOLD ESTATE, comprising Nos. 10 to 16, Garnault-mews, close to New River Head, consisting of good stables, with rooms over, now occupied by weekly tenants. Held at a low ground rent for about 40 years unexpired.—May be viewed. Particulars obtained of Messrs. LOXLEY & MORLEY, Solicitors, 80, Cheapside; and of the Auctioneers, Holywell-row, Finsbury.

CHARING CROSS RAILWAY, CITY TERMINUS.—To BUILDERS CONTRACTORS PAVIORS, and OTHERS

MESSRS. WILLIS & HARROW have been favoured with instructions from the Contractor to SELL by AUCTION, on the PREMISES, on WEDNESDAY, AUGUST 10th, 1864, at TWELVE for ONE o'clock precisely, the very superior MATERIALS of the substantially-erected range of Offices known as "Dowgate hill Chambers," comprising the lead and pipes, gutters and ridges, excellent flooring boards and timbers, plate glass sashes and frames, sashes, panelled, and glazed doors, Portland stone landings and staircases, Kentish rag and Bath stone, York, supports, ornamental Portland stone cornices and strapping, several sets of Runcorn & Co's patent corn-dresser iron shutters, iron safes, stoves, gas fittings, iron girders, and a variety of useful fixtures and fittings, &c.—May be viewed the day prior and morning of sale, and Catalogues had on the Premises; at the Contractor's Office, Worcester street, Southwark; and of Messrs WILLIS & HARROW, Auctioneers of Essex-yard, 3, Newman's-court, Cornhill, E.C. and West Moulsey, Molesey, Surrey

NORTH LONDON RAILWAY.—CITY TERMINUS.—Materials and Fittings of the Shop, Public House, and other Buildings now standing at the Corner of Long-alley and Saunder-street, Bishopsgate.

MESSRS. KENNEDY & BONNY will SELL the above MATERIALS by AUCTION, the Second week in AUGUST.—See future Advertisements.

Camden-town, July 28th, 1864.

NORWOOD.—Valuable Freehold Building Land, Land-tax redeemed.

MR. MARSH has received instructions to SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change-alley, Cornhill, on THURSDAY, AUGUST 4, at TWELVE o'clock, in one lot, valuable FREEHOLD BUILDING LAND, comprising about 8 acres, situate in the White Horse-road and Beckham Burton road, Norwood, within fifteen minutes' walk of the Norwood Junction Station, and three minutes' walk of the Thornton Heath Station, on the Balham and Croydon branch of the Brighton Railway, and suitable for the erection of first and second class detached residences. May be viewed, and particulars, with plans, had of G. W. ABBOTT, Esq. Solicitor, 64, King William-street, City; at Garraway's; and at Mr. MARSH'S Offices, 2, Charlotte-row, Mansion House.

SURREY.—The first portion of the Worcester Park Estate situate between Kingston and Ewell, twelve miles from London, and within half a mile and a half of the railway stations, one of which (Worcester Park Station) is on the estate, and thirty minutes' ride by rail from town, divided into Fifty-seven Lots of from one to two acres each, and Four from four to fifteen acres; also convenient registered title, the conveyance of which to each lot will be delivered to the purchaser free of all expense.

MR. MARSH is instructed by the Landed Estates Company (Limited) to SELL by AUCTION, at GARRAWAY'S, on FRIDAY, AUGUST 5th, at TWELVE, in Fifty-one Lots, the First Portion of the valuable Freehold BUILDING ESTATE, known as Worcester Park, anciently a royal manor, then distinguished as Little Nonsuch Park. This fine estate is most fully abodied with ornamental timber, and presents many choice spots for the erection of detached villas for which purpose it has been purchased by the Landed Estates Company (limited) and divided into plots of convenient extent. The subsoil is gravel and sand and a high service water-supply is laid on by the Lambeth Waterworks Company and direct from reservoirs at Kingston. The Ewell high road, from Kingston to Epsom, forms one boundary of the property, which possesses a frontage thereto of several thousand feet. The lots in Ewell parish are all Tithe free. Particulars, with plans attached, are in course of preparation, and may shortly be obtained of Messrs HOOK, the Surveyors of the Company, 14a, Great George-street, Westminster; Messrs. FORDYCE & SMITH, the Solicitors of the Company, 11, Staple-inn, or at Mr. MARSH'S Offices, 2, Charlotte-row, Mansion-house.

KENSINGTON.—Desirable Freehold Residence, with about 2½ acres of land, prettily timbered, and available for building purposes, within five minutes' walk of the Kensington Railway Station.

MR. MARSH has received instructions to SELL by AUCTION, at GARRAWAY'S, on THURSDAY, AUGUST 11, at TWELVE, the detached FREEHOLD RESIDENCE, distinguished as Weston Lodge, Portland-road, Kensington, with large pleasure and kitchen gardens, beautifully timbered, containing about 2½ acres, offering great advantages for building purposes, and is well worthy the immediate attention of capitalists, builders, and others. May be viewed on application, and particulars, with conditions of sale, with plans attached, may shortly be obtained of TURNELL SOUTHGATE, Esq. Solicitor, 7, King's-bench-walk, Temple, W.C.; at Garraway's; and at Mr. MARSH'S Offices, Charlotte-row, Mansion House.

PURLEY, in the Parishes of Croydon and Coulsdon, contiguous to the Coulsdon Junction Station, on the main line of the Brighton and South-Eastern Railways, about a mile and a half from the South Croydon Terminus, and twelve miles from London, which is reached in half an hour by rail.

MESSRS. BLAKE will SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change-alley, on WEDNESDAY, AUGUST 3rd, at TWELVE, the First Portion of the Purley Lodge Estate, consisting of about Twenty acres of FREEHOLD LAND, divided into suitable lots for building purposes, the northern portion varying from one to two acres, all the remainder from a quarter to half an acre. A very eligible site, adjoining the railway station, has been set apart for the erection of a Tavern. The land is ornamented with timber, and has a substratum of gravel and chalk. The situation is beautifully rural, and healthy and within easy access to the metropolis; presents to the timber, capital sites, and private gentlemen first-class sites for the erection of country residences.—Particulars, with plans, may be had at Garraway's Coffee house; of Messrs WEST & KING, Solicitors, 3, Charlotte-row, Mansion-house; and of Messrs. BLAKE, Croydon.

SUTTON, SURREY, in the immediate vicinity of the Sutton Station of the London and Epsom Railway

MESSRS. BLAKE will SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change-alley, Cornhill, on FRIDAY, AUGUST 19th, at TWELVE o'clock, HIGHLY ATTRACTIVE FREEHOLD BUILDING PLOTS, comprising the principal portion of the Sutton Park Estate, having capital frontages to the Cheam road, and to new roads, known as Grove and Cumbria roads. The land, which comprises an area of about seven acres, is elevated, and commands fine views. It has a substratum of chalk, and is admirably adapted for the erection of first-class residences. There is an early prospect of additional railway accommodation with the Metropolis, by which means the importance of the neighbourhood will be much enhanced.—Particulars, with plans, may be had seven days before the sale, at Garraway's Coffee-house; of the inns at Sutton, Epsom, Carshalton, and Reigate; of JOHN BERNEY, Esq. Surveyor, Croydon, of H. RICHARDS, Esq. Solicitor, Croydon; and of Messrs BLAKE, Croydon.

TONBRIDGE, KENT.—Forty-five acres of most valuable Freehold Building Land, a Family Residence, Stabling, and Buildings convenient to the town, and the endowed Free Grammar School.

MESSRS. CHARLTON will SELL the above by AUCTION (unless previously disposed of by private contract), at GARRAWAY'S COFFEEHOUSE, Change-alley, Cornhill, London, on WEDNESDAY, the 17th AUGUST, 1864, at TWELVE for ONE o'clock, in two lots.

Lot 1. A most valuable BUILD NG ESTATE; comprising about forty-five acres of pasture meadow land, eligibly situated close to the town of Tonbridge, having frontages to the London turnpike road of 1,185 feet, and to the Shipbourne and Wrotham turnpike road of 1,050 feet, and is well adapted for the erection of first-class residences, which are much in request in the locality, being within a few minutes' walk of the richly endowed Grammar School, which is increasing in importance every year, and has lately undergone considerable addition and enlargement. The situation is high and dry, the ground undulating, overlooking the varied and charming scenery for which the district is so celebrated. The property is prettily studded with timber, with two ornamental cottages suitable for lodge entrance; with the possibility of forming a lake in the stream of water running across the lower extremity, affords additional feature.

Lot 2. A brick-built FAMILY RESIDENCE, known as Dry-hill, approached by a carriage drive, with lodge entrance hall, drawing room, 27 feet by 17 feet 6 inches; library, 25 feet 6 inches by 16 feet 6 inches; water closet, cupboard, china pantry, store room, and beer cellar; larder, wood and scullery, butler's pantry, store room, and beer cellar; larder, wood and poultry houses, large laundry, the whole supplied with good water. The above lot has complete coachman's cottage, two stall stable, with loft over, harness room, double coach-house, two large warehouses, cattle yard and boiler, together with 5a. or 6a. of garden and fruit plantations, having frontages of 450 feet to the London turnpike road, and 400 feet to the Shipbourne and Wrotham turnpike road, also a valuable piece of land, lying between the roads at present containing 4a. or 5a. R. having on the premises; at the Contractor's Office, Worcester street, Southwark; and of Messrs WILLIS & HARROW, Auctioneers of Essex-yard, 3, Newman's-court, Cornhill, E.C. and West Moulsey, Molesey, Surrey

[For remainder of Auctions see p. ix.]

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of Cox & Wyman, No. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields, and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," No. 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday July 30, 1864.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c. to meet the great public demand ; and also for the convenient more extensive execution of all descriptions of hot water, bath, laundry, and steam work.

72—74, Bishopsgate-street Within.

COMPETITIONS.

BOROUGH of WALSALL.—To ARCHITECTS.—The Walsall Town Council are desirous of receiving DESIGNS for a TOWN-HALL and GAOL.—A premium of 30l. will be given for the Design which in the opinion of the Council is the best, and a Premium of 15l. for that which is in their opinion the second-best ; and both these sets of plans are to become the absolute property of the Council. Plans of the site, with statements of the offices and conveniences required, and of the conditions to be observed by the competitors, may be had on application to the Town Clerk.—By order,

SAMUEL WILKINSON, Jun. Town Clerk.

Walsall, 14th July, 1864.

COMPETITION for VILLAS.—The Rev. E. DAVYS presents his compliments and best thanks to the numerous Architects who favoured him with their designs. The premium of 20l. is awarded to T. C. SORBY, Esq. of Bedford-row, London. Two additional premiums of 10l. each have been given, for the use of their designs, to JAMES KENDALL, Esq. of Darlington, and WILLIAM YOUNG, Esq. of Waterloo road, Manchester ; and one of 5l. to E. C. TILLY, Esq. of Bolton-le-Moors.

TERRA-COTTA ENGINE CHIMNEY TOP.—WANTED, DESIGNS and PRICES for BEADING and TOP of an Octagon CHIMNEY, 90 feet high and 4 feet clear inside at top, 10-inch walls.—Address, SPEAR & JACKSON, Etna Works, Sheffield.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.

TENDERS are required for CARRYING OUT the ARTIFICERS' and other WORKS of an estimated value of three hundred pounds and under, at NETLEY, in the County of Hants, under a TRIENNIAL CONTRACT, from the 1st of OCTOBER next, determinable at any period after one year on either party giving to the other three months' notice in writing.

Copies of the Schedules (price seven shillings and sixpence) and form of Tender may be obtained on application at this Office.

The Secretary of State for War does not bind himself to accept the lowest or any Tender. (Signed) P. RAVENHILL,

Major, Commanding Royal Engineer, Netley.

Royal Engineer Office, Netley,
2rd August, 1864

COAST GUARD CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.

Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Kingsdown, near Deal, in the county of Kent, may inspect the Drawings and Specifications at the Coast Guard Watch House, Deal, or at this Office, between the hours of TEN and FOUR, from TUESDAY the 2nd, to MONDAY, the 15th of AUGUST, now next ensuing, all both inclusive (Sundays excepted.)

Tenders to be sent to this Office not later than TWELVE o'clock at noon, of the 16th AUGUST, under seal and directed to the Commodore Controller-General of Coast-Guard, and endorsed "Tender for Kingsdown."

The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or either of the Tenders.

Dated this 26th day of July, 1864, at the Admiralty, Coast-Guard Office, 12, Spring-gardens, London, S.W.

TO BUILDERS and CONTRACTORS.—STAFFORDSHIRE.—Persons disposed to TENDER for the ERECTION of a POLICE STATION and MAGISTRATE'S ROOM at Tipton, may inspect the plans and specification, and obtain bills of quantities at my Offices, on and after TUESDAY, the 2nd day of AUGUST, until THURSDAY, the 11th of AUGUST. Sealed Tenders, endorsed "Tipton Police Station," must be delivered at my Offices, on or before the 11th of AUGUST, by TEN o'clock, a.m. A charge of 1l. 1s. will be made for each copy of quantities, but will be returned to all parties submitting Tenders for the works. Neither the lowest nor any Tender will necessarily be accepted.

ROBERT GRIFFITHS, Architect.

County Surveyor's Office, Eastgate-street, Stafford,
20th July, 1864.

TO BUILDERS.—Persons desirous of TENDERING for the RESTORATION of High Easter Church, Essex, can see the plans and specification at the Offices of Mr. FRED. CHANCELLOR, Architect, Chelmsford, after the 4th of AUGUST. Tenders to be delivered to the Architect on or before the 19th of AUGUST. The lowest or any Tender will not necessarily be accepted

TO CONTRACTORS.—The Trustees of the Town, Port, and Harbour of Whitehaven are prepared to receive TENDERS for SEWERAGE and OUTFALL WORKS for the drainage of the said town and neighbourhood. Drawings and specification, prepared by Mr. HAWKSLEY, Civil Engineer, 30, Parliament-street, Westminster, may be seen at his Office, and at the Office of the Secretary to the Trustees, at the Town Hall, in Whitehaven (where bills of quantities and other particulars may be obtained), on and after MONDAY, the 1st day of AUGUST next. Sealed Tenders, addressed to the Secretary to the Trustees, must be delivered at his Office, in Whitehaven, on or before MONDAY, the 22nd day of AUGUST, but the Trustees do not pledge themselves to accept the lowest or other Tender, although they will do so unless there should appear to them to be sufficient reason for the contrary.

By order, JOHN COLLINS, Secretary to the said Trustees.

Queen-street, Whitehaven, 22nd July, 1864.

TO BUILDERS.—GLEWSTONE SCHOOL CHURCH, in the Parish of Goodrich, near Ross.—Plans and specifications may be seen at the house of Mr. WILLIAM MORGAN, Church House, Goodrich : and TENDERS to be sent to my Office, as below, on or before the 13th day of AUGUST. The lowest or any Tender not necessarily accepted. JOHN V. BEDDOE.

12, Park-street, Westminster.

TO GAS ENGINEERS, SMITHS, and OTHERS.—The Vestry of the Parish of Chelsea will meet at the Vestry Hall, King's road, on TUESDAY, the 9th day of AUGUST next, at THREE o'clock in the afternoon, to receive TENDERS from persons willing to CONTRACT for twelve months for the SUPPLY of STREET LAMPS, and the several parts thereof, and for the Works connected with the fitting and fixing thereof in the said parish, as may be required and directed : Further particulars, with the form of Tender, may be had on application at this Office. Sealed Tenders, signed by the proposed Contractor, with the name and description of two sufficient sureties for the performance of his contract, to be delivered to the Clerk, by or before TWELVE o'clock on the said 9th AUGUST next. The contract deed will be provided by the Vestry. No Tender will be received or accepted unless made on the printed form ; and the Vestry do not bind themselves to accept any Tender.—By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's road, Chelsea, July, 1864.

TO CONTRACTORS.—Parties desirous of TENDERING for the several WORKS required in the proposed EXCHANGE, Bradford, are requested to forward, by letter, their names and addresses to us, not later than SATURDAY, AUGUST 13th, and to state whether a Tender will be delivered for the whole or for which department only of the work.

Post-office Buildings, Bradford. LOCKWOOD & MAWSON,
Lincoln's-inn Fields, London, Architects.

CONTRACTS.

BOARD of WORKS for the HACKNEY DISTRICT.—Notice is hereby given, that the Board of Works for the Hackney District will, at their meeting, to be held on the 18th day of AUGUST next, at the Town Hall, Church-street, Hackney, at ELEVEN o'clock in the forenoon precisely, be prepared to open TENDERS for the supply and delivery of 10,000 tons (more or less) of the best BLUE GUERNSEY GRANITE, broken to a gauge of 2½ inches, to be delivered and landed at their Wharfs, at Cambridge Heath and Kingsland Basen, in such quantities and manner as shall be directed by the Surveyor. Any further information may be obtained by applying to Mr JAMES LOVEGROVE, C.E. Surveyor to the Board, at his Office, Town Hall, Church-street, Hackney. Tenders, with samples, to be sent in on or before the 17th day of AUGUST last, addressed to the Clerk, and endorsed "Tender for Broken Granite." The Tender to state the difference (if any) in price for any portion that may be ordered after the 29th of SEPTEMBER. Persons contracting will be required to enter into a bond or security, with two approved sureties, for the due performance of the contract. The Board do not bind themselves to accept the lowest or any Tender. The parties tendering are expected to be in attendance at ELEVEN o'clock, a.m. (Signed) RICHARD ELLIS, Clerk.

Town Hall, Hackney, August 4, 1864.

TO BUILDERS and OTHERS.—TENDERS are required for the BUILDING of a NEW BRIDGE, in the parish of South Mimms, about one mile from the Potters Bar Station of the Great Northern Railway. Also a separate Tender for Widening another Bridge, at Mimms Hall, in the same parish. The plans and specifications are deposited for inspection at Mr BASKERVILLE'S, South Mimms, and may be seen any day between TEN and FOUR o'clock. The Tenders to be endorsed "Tender for Bridge," and are to be delivered to the undersigned on or before noon, on SATURDAY, the 13th day of AUGUST, 1864 The lowest or any Tender will not necessarily be accepted.

South Mimms, Middlesex. CHARLES COWLAND, Surveyor.

TO PAINTERS and CONTRACTORS.—PARISH of SAINT PANCRAS, in the County of Middlesex.—Notice is hereby given, that the Directors of the Poor will meet at the Vestry Hall, King's road, Pancras-road, on TUESDAY, the 23rd day of AUGUST instant, to receive TENDERS from Painters and Contractors for the PAINTING of the Exterior WOOD and IRON-WORK of the WORKHOUSE and adjacent Building, according to specifications, to be seen at the Office of the Clerk of Works, 10, Edward-street, Hampstead-road, where further particulars may be obtained. Security will be required for the due performance of the contract. Tenders, endorsed, "Tender for Painting," to be delivered at the Vestry Offices, before TWO o'clock in the afternoon of the said TUESDAY, the 23rd day of AUGUST next, after which hour no Tender will be received. Persons Tendering, or their agents, are expected to be in attendance at the said meeting, at THREE o'clock, but no travelling or other expenses will be paid on any occasion. The Directors do not bind themselves to accept the lowest or any Tender.

By order, FRANCIS PLAW, Clerk.

Vestry Offices, Pancras-road, 2nd August, 1864.

TO BUILDERS. — Persons willing to TENDER for the ERECTION of a VILLA RESIDENCE, at Padeswood near Mold, Flint-shire, can apply by letter for particulars before the 12th instant, to the Architect, Mr. T. BOWER, Jun. Nantwich.

BUILDERS and CONTRACTORS desirous of TENDERING for the ERECTION of a new BAPTIST CHAPEL at Acton, may inspect the plans and specification at my Office between the hours of TEN a.m. and FOUR p.m. from the 5th to the 13th instant. Tenders must be delivered to the Committee, at the School-rooms, Westbourne grove Chapel, at SIX o'clock in the evening of MONDAY, the 15th inst. The Committee do not bind themselves to accept the lowest Tender.

WM. MUMFORD, Architect, 10, Lincoln's-inn-fields.

TO BUILDERS.—TENDERS are required for the COMPLETION of Two VILLA RESIDENCES, Belvedere Park, Erith, Kent. —Drawings and specification may be seen, and all particulars obtained, at the Offices of the Architects, Messrs. W. G. HABERSHON & PITE, 33, Bloomsbury square.

BLACKFRIARS BRIDGE. — TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland stone in blocks and in steps, Roach, Portland, and rough rubble. Also for the handsome columns, with moulded bases and carved caps.—Apply to Messrs. THORN & CO. Contractors, on the Bridge.

TO BUILDERS.—TENDERS are required for BUILDING a Pair of Semi-detached VILLAS, at Shrewsbury-lane, near Shooter's Hill, Kent, for E. O. Harrison, Captain, Royal Artillery. Drawings and specifications may be seen, and copies of quantities obtained, at the Offices of Messrs. W. GOSLING & SON, 83, Wellington-street, Woolwich, Architects and Surveyors. Tenders to be sent in on FRIDAY next, the 12th instant, as Captain Harrison does not pledge himself to accept the lowest or any Tender

BOROUGH of WIGAN, in the County of Lancaster.—NOTICE to BUILDERS and CONTRACTORS.—Persons desirous of TENDERING for the ERECTION of a GAOL, COURT-HOUSE, and BOROUGH OFFICES, for the said Borough of Wigan, may inspect the drawings and specifications at the Offices of Messrs. NUTTALL & COOK, Architects, 17, Lord-street, Liverpool, between the hours of TEN and FOUR, on and after THURSDAY, the 11th instant, until THURSDAY, the 1st of SEPTEMBER next (Sundays excepted). The quantities may be obtained on application to Messrs. NUTTALL & COOK on payment of the sum of 2l. 2s. which will be returned on delivery of a Tender. Tenders to be sent in on or before THURSDAY, the 1st day of SEPTEMBER next, under seal directed to C. HILTON, Town Clerk, Wigan, indorsed "Tender for Borough Gaol, &c." The Corporation do not pledge themselves to accept the lowest or any Tender sent in.

C. HILTON, Town Clerk.

Dated this 3rd day of August, 1864.

[For remainder of Contracts see next Page.

NENE NAVIGATION.—THIRD DIVISION.—To CONTRACTORS, EXCAVATORS, and OTHERS.—Persons willing to CONTRACT with the Commissioners of the Nene Navigation (Third Division) for DEEPENING the RIVER NENE, from Peterborough downwards, are requested to send or deliver to me, on or before WEDNESDAY, the 10th day of AUGUST instant, Sealed TENDERS for Executing the Work. The sections and specifications of the work may be seen on application to Mr. WM. ADAMS, Wisbech. The Tenders to be endorsed "Tender for Excavating the River Nene." The Commissioners are not pledged to accept the lowest or any Tender. By order,

PEA. JACKSON, Clerk to the Commissioners.

Wisbech, August 1, 1864.

TO BUILDERS.—The Committee of the Brighton National Schools are prepared to receive TENDERS for the ERECTION of a BRANCH SCHOOL in Richmond-buildings, according to plans, drawings and specifications, prepared by Messrs. SCOTT & SUTER, which may be seen at their Office, 34a, Regency-square, Brighton, where forms of the Tenders may be obtained. Sealed Tenders, addressed to the above Committee, may be sent in on or before the 12 h instant. The Committee do not bind themselves to accept the lowest or any Tender.

Central National Schools, Brighton, August 1, 1864.

CROYDON LOCAL BOARD of HEALTH. To CONTRACTORS and OTHERS.—Persons desirous of CONTRACTING with the Croydon Local Board of Health for FORMING, MAKING, and METALLING the ROADS, CONSTRUCTING the EARTHENWARE and IRON-PIPE SEWERS, and other Works on the Lands in Croydon Land Societies' Bensham Estate, at Thornton Heath and the adjoining district, in the parish of Croydon, in accordance with the plans and specification prepared by Mr. Baldwin Latham, C.E., the Engineer for the Croydon Local Board, can inspect the plans and specification, and obtain other information at the said Engineer's Office, at the Town Hall, Croydon, on or after this date. Sealed Tenders, endorsed "Tender for Roads and Sewers, Thornton Heath," are to be delivered at the Offices of the Local Board, in the Town Hall, Croydon, on or before FOUR o'clock in the afternoon of TUESDAY, the 9th day of AUGUST, instant. The Local Board do not bind themselves to accept the lowest or any Tender.

3rd August, 1864 HENRY RICHARDS, Clerk to the Board.

TO BUILDERS. — Persons willing to CONTRACT for the ERECTION of a new CHURCH at New Ferry, near Birkenhead, according to the drawings prepared by Mr. E. Haycock, jun. architect, Shrewsbury, may see the plans, specifications, and obtain the Notice Board Place, New Ferry, a quarter half a mile from Bebington Station, on and after this date. Sealed Tenders received by the Rev. G. R. PEILDEN, Bebington Rectory, Birkenhead, on or before MONDAY, the 22nd instant. The Committee do not bind themselves to accept the lowest or either Tender.

Bebington, August 1, 1864.

BUILDING GROUND.—TO BE LET, from Michaelmas next, a valuable PLOT of GROUND, adjoining the Lea Bridge Railway Station, with a frontage of 300 feet to the Lea Bridge-road, the total area being five acres and a half.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

WATERSIDE PREMISES, City-road.—Messrs. FULLER & HORSEY are instructed to LET, on LEASE, from Michaelmas next, extensive WATERSIDE PREMISES, occupying a site of 21 000 superficial feet, situate on the Wenlock Basin, City-road, and comprising a spacious and substantial modern brick-built manufactory of two floors, engine and boiler-houses, with 50-horse power steam-engine and three Cornish boilers, range of brick built offices, and joiners' shed with gateway entrance. There is a water frontage of about 207 feet.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

PUTNEY.—To BUILDERS and OTHERS. Superior BUILDING LAND TO BE LET, on the Richmond-road, Putney, within 150 yards of the railway station. Lease, 99 years. Ground-rent moderate. Liberal allowance made.—For plans, &c. apply to J. H. ROWLEY, Esq. Architect, 35, Poultry, E.C.

FREEHOLD LAND TO BE LET, on Building Leases, at low ground-rents, on the estate of the Carpenters' Company at Station, Essex, close to the Station and the High street: one portion with river frontage, for the erection of manufactories, and another for small houses or cottages.—For plans and particulars, apply at the Clerk's Office, Carpenters' Hall, London-wall.

FREEHOLD LAND TO BE SOLD or LET on BUILDING LEASES, in Glengall-road, Old Kent-road.

AND ALSO near Forest-hill Station.

ALSO FREEHOLD WHARF on the Surrey Canal, near Old Kent-road.—Apply to Mr. MAY, Acorn Timber Wharf, Old Kent-road.

SURBITON.—TO BE LET, on Building Leases, LAND within five minutes' walk of the Station, and close to the River, for HOUSES of not less than 80l. a year rent. If desired, a portion of the money so paired will be advanced. In case of Mr. MUDIE, Victoria terrace, Surbiton.

FREEHOLD BUILDING LAND TO BE LET, at Chislehurst, Kent, on long lease, at moderate ground-rents, suitable for villas, cottages, and shops. There being a great want of small-er dwellings, they would let immediately, and the sites offer a good investment. Also, LAND suitable for first class residences, commanding magnificent views, all within easy access to rail for City and West-end. The situation is celebrated for pure air and water, is high and dry, rich soil, and not to be surpassed in picturesque beauty.—Apply to Mr. F. THORNE, 4, Corbett-court, City; and Rose-bank, Lee-road, Lee, S.E.

TO BE LET, Large and Valuable PREMISES, with water communication, one mile north from the Bank. Formerly occupied by a hanging paper manufacturer, who realized a large fortune there.—Apply to E. & W. SIURGE, Bridge Wharf, City-road, E.C.

BUILDING LAND TO BE LET, situate at Vauxhall, Leytonstone, and Camberwell.—For particulars apply to Messrs. DRIVER & CO. 4, Whitehall, London, S.W.

FOREST HILL.—BUILDING LAND TO LET on this hill, commanding extensive views.—Apply to A. B. 192 Bermondsey-street, S.E.

TO BRICK and TILE MAKERS.—SIX ACRES of rich BRICK EARTH, capable of making millions, TO BE LET, on lease, or freehold sold, close to the Romford Station. Apply to Mr. GEORGE KNOX, Park Cottage, Romford, who will show the land.

YARD and PREMISES at BRIDGWATER.—The Directors of the Bristol and Exeter Railway Company are prepared TO LET, for a term of years or otherwise, from Michaelmas, 1864, the YARD and PREMISES known as Somerset Yard, adjoining the railway and near the station at Bridgwater, Somersetshire, at present in the occupation of Mr Cuthbert Ritson, Contractor and Timber Merchant. The Premises comprise about 4 acres, have a water frontage of about 720 feet to the river Parrett, and are connected with the railway by a line of rails running into the yard—as can be viewed on application at the Premises. Possession can be had at Michaelmas, 1864. Tenders to be addressed to the Secretary of the Bristol and Exeter Railway Company, at Bristol, from whom any necessary information may be obtained.

Bristol, 25th July, 1864 ARTHUR MOORE, Secretary.

THORNTON HEATH, CROYDON.—TO BE LET, for Building, a very desirable Plot of FREEHOLD LAND, 300 feet in depth, and 45 feet frontage to the London road, situate less than a mile from the healthy town of Croydon and the West Croydon Station at a moderate ground-rent.—For particulars, apply at Gloucester Cottage, Thornton Heath (adjoining the Land), or at Mr. HAYES'S, No. 18, Austin Friars.

TO LANDLORDS.—WANTED, a good commanding SHOP and HOUSE, suitable for a Cheesemonger, within a short distance of the City—Address, stating full particulars, U. P. Post-office, Bishopsgate Without, E.C.

SAFE INVESTMENT.—To Trustees and Others.—For SALE by PRIVATE CONTRACT, TWO FREEHOLD DETACHED VILLAS, situate in a high and dry neighbourhood, with large well stocked garden, conservatories, labbing, and carriage-way, close to a railway station. The vendor will take a lease of both villas for seven, fourteen, or twenty-one years. No agents need apply.—Address, X. 3, Oakfield terrace, Penge, Surrey.

TO BE SOLD, a valuable FREEHOLD PLOT of GROUND, Plot No. 317, frontage 25 ft. by 97 ft. deep, on the Ellis Estate, Mutley road, Waterlane, Lower Dulwich road, Bratton.—Apply to R JOHNSON, 65, Harrison-street, Gray's-inn-road

VICTORIA PARK ROAD, SOUTH HACKNEY.—TO BE LET, with or without a capital Residence, CONVENIENT PREMISES, at present used by a builder, comprising large yard, with commanding house, owner's shop, 65 feet by 33 feet, room under of the same dimensions, 25 feet high; painters' and masons' shops, three-stall stable, granary, cart-shed, and storerooms. Rent 90l per annum.—Further particulars to be had of Mr. A. RICHARDS, Auctioneer, Tottenham.

TO MARBLE MASONS.—WANTED to PURCHASE (for cash), a Quantity of MARBLE CHIMNEY PIECES, openings 2 ft. 6 in. to 3 ft. 10 in.—Address, stating price, to A. B. 32, Southampton buildings, Chancery-lane, W.C.

TO SCULPTORS, MASONS, BUILDERS, &c.

FABRINI, BROTHERS, Carrara Wharf, Thames Bank, Pimlico, has ALWAYS ON SALE, a well selected Stock of Statuary, Veined, Sculptors' (or purple veined), Sicilian, and Dove Marble (the produce of their Quarries at Carrara, Italy); also Bardilla, Black and Gold, Grecotte, Breccia, Sienna, St. Ann's, Langnedoc, Vert des Alpes, Black, &c. &c.; and Alabaster, in Blocks, with slabs of several of those qualities. Also Solid Marble Baths and Mortars, and Vases and Figures, in Statuary and Sicilian, for Gardens and Galleries. Rough Marble and Decorative Sculpture Works supplied by contract.

TO ARCHITECTS, BUILDERS, and CONTRACTORS.

QUARRY FOR HEAVY MATERIALS.

Corgrig Quarry supplies Mountain Limest ne from beds which vary in thickness between eight inches and six feet. The length and the breadth of the slabs or blocks to order as required. The dip of the beds is favourable for quarrying. The quality of the stone is extreme toughness and freedom from flakes, making it equal to granite for bridges, embankments, quays, and all heavy work, besides having a fine and close texture, admitting the best polish. A first-rate road of but half a mile, connects the Quarry with the Harbour of Foynes, the River Shannon giving easy shipment on board sea-going vessels. Price, F. O. B. 6d. per cubic foot, roughly scabbled.

Apply to STEWARTS & KINCAID. 6, Leinster-street, Dublin; or O. N. KNOX, Esq. Corgrig Lodge, Foynes, Ireland.

SERPENTINE, large size and great variety, EQUAL TO GRANITE IN DURABILITY; adapted for TOMBS, COLUMNS, CHIMNEY PIECES, and all purposes for which MARBLE and GRANITE are used. Manufactured by THE LIZARD SERPENTINE COMPANY (Limited), Office, 34, St. James's-street, London, S.W.; Works, Carleon Cove, Lizard, Cornwall. Agent for Manchester and Liverpool, T. OAKDEN, 94, King-street.

G. MITCHELL, MARBLE, STONE, and GRANITE WORKS. SHOWROOMS: No. 166, BROMPTON ROAD, LONDON, S.W.; where Architects, Builders, and Merchants will find the largest and best Stock of CHIMNEYPIECES and MONUMENTS in London; of which Books, Catalogues, and Sheets of Monuments will be forwarded on application. Estimates will meet with prompt attention. MANUFACTORY at WALTON STREET.

WEARDE STONE QUARRIES, LIMITED. The Stone produced from these Quarries has been proved to be the most durable of any in the market, and can be had for Pitching in any sizes; also for Macadamising.—Samples sent, with prices, on application to the Manager, E. M. CROKER, Gunnerslake, Cornwall.

PATENT CONCRETE STONE COMPANY (Limited).—The Directors have granted LICENCES for six of the Counties of Great Britain, and are prepared to entertain further Propositions for LICENCES for the MANUFACTURE of this valuable MATERIAL.—Plans for the erection of Works, and full instructions, on application.—By order, THOMAS PIPER, Secretary.

36, Parliament-street, S.W. May, 1864.

POLISHED GRANITES.—TOMBS COLUMNS, PILASTERS, &c. &c. in RED, BLUE, or GREY GRANITE, supplied by WILLIAM & JOHN FREEMAN, 27, MILLBANK STREET, LONDON, S.W.

ABERDEEN POLISHED GRANITE WORKS.—Awarded Prize Medal in 1851, Silver Medal in 1855, and Two Prize Medals in 1862, for the Polished Granite Work. Aberdeen Red, Blue, and Grey Granite for every description of architectural construction, decoration, memorials, and general purposes. Apply to ALEX. MACDONALD, FIELD, & CO. Aberdeen; and at London Depot, 404, Euston-road, N.W.—DAVID WILLET, Agent.

DARTMOOR GRANITE.—The Dartmoor Granite Quarries, lately belonging to the Haytor Granite Company, are now worked by the Dartmoor Granite Company, of Laira Wharf, Plymouth, and Portland Wharf, Grosvenor-road, Pimlico, London.—For prices, &c. apply to W. H. HOLLAND, Agent and Manager for the Company, Portland Wharf, 20, Grosvenor-road, Pimlico, S.W.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplies direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Working prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 27, Millbank-street, London, S.W.

CAEN and AUBIGNY STONE. FOUCARD, BROTHERS, STONE MERCHANTS and QUARRYMEN. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Office—10, Three Crown-square, Southwark.

LITTLE CASTERTON FREESTONE. Apply, for prices, &c. to OCTAVIUS N. SIMPSON, STAMFORD, The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street.

This stone (which is a perfect colite) is raised in blocks of any portable size and is about 4 feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to plane it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

* * * The above WEATHER STONE is used largely by London Builders.

RED MANSFIELD STONE, WHITE MANSFIELD STONE, YELLOW MAGNESIAN or BOLSOVER LIMESTONE. Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station. Mr ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales. SLABS and CISTERNS delivered at any station in quantities of not less than five tons, from their depôts. BANGOR, GARSTON, SALTNEY, CHESTER, and GLOUCESTER. Prices forwarded and estimates given on application. 1, BOLD TERRACE, CHESTER.

WELSH GREEN SLATES can now be obtained in unlimited quantities and at reduce rates.—For prices and samples apply to ALFRED BRABY, BANGOR WHARF, BELVEDERE ROAD, LAMBETH, S.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below Bridge, delivered by the yard or per barge. Ballast, screened or uncreened, by the yard or per barge. Stocks, Lime, and Old Bricks. Dry Rubbish delivered, per barge, in any quantity alongside the Thames.

TO CONTRACTORS, QUARRY OWNERS, MINERS, &c.

BLAKE'S STONE BREAKER is recommended by the best Engineers in this and other countries to Break Stone of every description, of the best quality for Macadam Roads, Concrete, Ballasting Railways, &c. It takes in large blocks or round boulders, and reduces them to fine road metal, at a cost of from 2d. to 3d. per ton. If your pauper labourer costs 3l. per day, this machine will do more work, and do it better, at 2d.—For circular testimonials, &c. apply to H. R. MARSDEN, SOHO FOUNDRY, LEEDS.

PRIZE MEDAL AWARDED AT THE INTERNATIONAL EXHIBITION, 1862.

THE ARCHITECTURAL POTTERY COMPANY, POOLE, Dorset, Manufacturers of BALE'S PATENT INLAND MOSAIC TILES; also superior TESSELLATED TILES, 6 inches and 4 inches square, hexagonal and octagonal, &c.; white, red, buff, black, blue, grey, &c. for churches, entrance-halls, corridors, conservatories, lobbies, vestibules, porticos, verandahs; plinths, friezes, string courses, pilasters, &c.; also, white glazed tiles for baths, dairies, &c. They also beg to call attention to their NEW MANUFACTURE OF METALLINE TILES, 6 inches by 1 inch thick, in truck-loads of 4,000, from 63s. per 1,000, cash, delivered to Nine Elms. Also, sand kiln, ridge, gutter, and hip tiles, buff, glazed, and fire-bricks. Specimens may be seen, and every information obtained, at the Offices, No. 35, Parliament-street, S.W.; also at the Architectural Exhibition, 9, Conduit-street, Regent-street; Kensington Museum; the Fine Arts' Academy; and the Crystal Palace, Sydenham.—Address, The Architectural Pottery Company, 35, Parliament-street, S.W.; or Poole, Dorset.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern-book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City-road Basin, N. Finally, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Juries," page 561, of the Great Exhibition 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

CROGGON and COMPANY, Manufacturers of PATENT ASPHALTE ROOFING, BOILER, RAILWAY, SHEATHING, and INODOROUS FELT, For Damp Walls, and Lining Iron Houses, DOWGATE HILL, London; and 2, GOREE PIAZZA, Liverpool.

ASPHALTE.—GERVASE FOOTTIT, TRINIDAD ASPHALTE WORKS, Rotherhithe, London. Established 1834.—TRINIDAD, EYSSELL, and BRITISH ASPHALTES, manufactured by steam power, laid down in the best manner, or supplied in any quantity. Information for using forwarded with material. Post-office orders or reference in London promptly attended to. Estimates given for every kind of the above work.

FOUR-HORSE POWER VERTICAL STEAM BOILER for SALE. Second-hand.—Apply to JAMES ROBINSON & Co. 23, Villiers-street, Strand, W.C.

MOULDING and PLANING by MACHINERY IRONS.—Manufactured by D. STUART SPEIRS, 170, Walton road, Liverpool. Estimates supplied on application for large quantities of Moulding Irons.

ROBINSON'S PATENT STEAM-SAW SHARPENER and PUNCH. By the use of which Files are entirely dispensed with in sharpening Vertical and Circular Saws, thus combining economy, expedition, and mathematical precision, quantity and quality of cutting surpassing hand sharpening at a saving in files of 95l. per cent. 125, NEW KENT ROAD, LONDON, S.E.

TWO CAST-IRON COLUMNS FOR SALE, 20 feet long 10 inches diameter; Four Spring Girders, about 12 feet long; and about Twenty Candlivres, 7 feet long: also, 200 loads of good sharp Sand for Sale, lying in the City.—Apply at ENGINEER, Hartshorn court, Golden-lane.

JAMES ROBINSON & Co. Engineers, Iron Founders, &c. 23, Villiers-street, Strand, W.C. have the following surplus stock for immediate sale, at low prices. An 8-inch Cylinder Table Engine, a Punching and Shearing Machine for 3-inch iron, 3 Fire Engines, 8 Garden Force Pumps; a set of three 7-inch Gun Metal Pumps; 100 9 feet lengths, 5-inch Socket Pipes; complete sets of Well-boring Tools; Screw Water Valves, Gas Valves from 2-inch to 15-inch; Street Watering Posts, Stand Posts; Gas and Heating Stove; Traversing Crane, Oat Crushing Machine, 6 Gas Holder Columns, 18 feet long; 3 6-feet Fly Wheels, 2 12-feet Fly Wheels, shafting, Riggers, &c. &c. Full particulars and prices to be had on application.

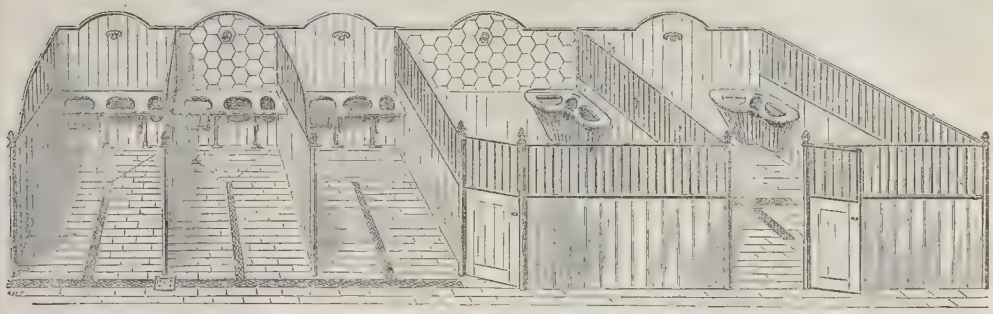
THE PRIZE MEDALS,

LONDON, 1851. PARIS, 1855. LONDON, 1862.

AWARDED TO

COTTAM & COMPANY,

No. 2, WINSLEY-STREET, LONDON, W.



FOR PROGRESSIVE AND GENERAL IMPROVEMENTS IN

STABLE FITTINGS AND HARNESS BRACKETS.

PATENTEES AND ORIGINAL INVENTORS OF

THE IMPROVED SYSTEM OF STABLE AND HARNESS FITTINGS,

PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS, AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND HUNTING ESTABLISHMENTS IN THE KINGDOM.

SECURITY FROM ACCIDENT by the use of the Patent Halter Guide and Improved Curved Top-plate; PROMOTION of HEALTH, COMFORT, and CONDITION, by the cleanliness and power of resisting infection of the Mangers and Troughs; and also of the Patent Drop Cover, to curtail the quantity of water to be imbibed. ECONOMY in the USE of FOOD, from the improved formation of the Fittings, and by means of the Patent Portable Seed-box, are some of the peculiar recommendations of Cottam's Patent Componised, Enamelled, and Galvanized Iron Fittings for Stalls and Loose Boxes.

COTTAM'S PATENT COMBINED SADDLE and HARNESS BRACKETS; IMPROVED SURFACE GUTTER, WITH MOVEABLE SAFETY COVERS; Sanitary Traps, Cheap and Durable Corn-bins, and every Article requisite for the Stable and Harness-room.

IRON GATES, FENCING, and HURDLES MADE by MACHINERY.

COTTAM'S newly-invented REGISTERED NOISELESS MANGER SHACKLE and GUIDE FOR HALTER-STRAP, and IMPROVED VENTILATING HARNESS BRACKETS, are only to be obtained from the Inventors, and can be seen in use at their Manufactory.

COTTAM & CO. exhibit for inspection, at their Iron Works, 2, Winsley-street, W., an extensive range of full-sized Stalls, Loose Boxes, and Harness Rooms, the most complete that can be imagined.

ILLUSTRATED CATALOGUES and LITHOGRAPHS free, on application to COTTAM and CO. 2, WINSLEY STREET, Oxford-street, London, W.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

N.B. WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

17, QUEEN STREET, CITY;

GLASGOW OFFICE,

199, BUCHANAN STREET.

HOBBS, HART, & CO.'S
MACHINE-MADE LOCKS AND STREET-DOOR LATCHES.

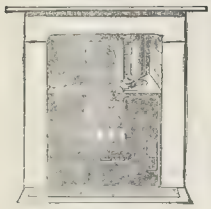
These Locks are recommended for all purposes requiring good security combined with economy of price and durability of wear, as by means of machinery a faultless accuracy is arrived at, which by hand labour would be impossible except at a greatly increased cost.

Architects and Engineers are requested to notice that the security of these Locks consists in a series of Levers, that have to be raised to unequal positions by the bits of the key before the bolt can pass. These will bear comparison with those at treble their cost.

These Locks are made with from Two to Five Levers, and can also be made in suits to differ with Master Keys to pass.

The retail prices of Locks for Cabinet purposes are from 2s. to 4s. each; for Room Doors, 4s. to 9s. 6d. each; Street Door Latches, 7s. 6d. to 18s. each.

This Illustration represents the Two-bolt Four-lever Mortise, with Hobbs & Co.'s Patent Follower, price 8s.



HOBBS, HART, & CO.'S PATENT PROTECTOR LOCKS.

300 Guineas were offered in the late Exhibition (*the only Lock for which a Premium was offered to pick*) to any one who could pick these Locks in thirty days. Their speciality consists in their combining the two essentials of security, viz.—Protection against picking by means of their Patent Moveable Lever Protector, and Protection against Illicit Tampering with the Key by means of their Patent Nozzle Protector.

These all-important principles are the special and peculiar features of HOBBS, HART, & CO.'S Patent Locks These Locks vary in price from 10s. to 50s. each, with Solid Keys. For prices, with Changeable Keys, see 16-paged Illustrated List of Locks, Iron Doors, Safes, &c. which can be had on application.

HOBBS, HART & CO. 76, CHEAPSIDE, LONDON, E.C.

CUNDY'S

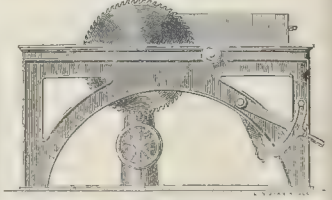
IMPROVED MOULDING MACHINE.

SHOW ROOMS for FINISHED WORK ready for immediate delivery, consisting of Horizontal Engines from Four to Forty-Horse Power, Circular Saw Benches, Deal Frames, Moulding, Planing, Mortising, Tenoning, and other Machines.—Entrance, No. 115, Blackfriars-road.

Letters to Chief Office, 26, WATLING STREET, CITY, E.C.



PRIZE MEDAL, LONDON, 1862.

THOMAS ROBINSON & SON,

SAW-MILL ENGINEERS,

ROCHDALE, NEAR MANCHESTER.

London Office, 9, Adam-street, Adelphi, W.C.

IMPROVED SAW BENCH,

for Sawing, Tonguing, Grooving, Rebating, Boring, and Cross-cutting.

Manufacturers of Sawing, Planing, Moulding, and Wood-working Machinery of every description, suitable for Builders, Contractors, &c. Steam Engines and Boilers, Shafting, Gearing, &c.

Full sets of Wood-working Machinery to be seen in operation daily at the Works, Rochdale.

DAY and GAS LIGHT REFLECTOR MANUFACTURER.—THOMAS FOX, 90, Hatton Garden, E.C. and 38½, Charles-street, Hatton Garden, E.C. A large assortment of Silvered Glass Globes, Lamp Spires, &c. always on hand. All kinds of Bent Glass Silvered.

N.B. The usual discount to BUILDERS and the TRADE.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT.

This improved system of fire proof construction has been most extensively adopted, and its application has been established in nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,

12, YORK BUILDINGS, ADELPHI

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.

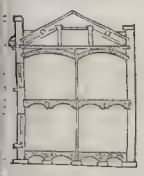
MUSGRAVE'S PATENT HARMLESS LOOSE BOXES, MUSGRAVE'S PATENT IRON COW-STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first class stables in almost every county in England, and MUSGRAVE, BROTHERS, are now fitting several very large establishments under directions of London Architects, noted for adopting only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

BROWN & GREEN'S
PATENT KITCHEN RANGES.

PRIZE MEDAL, 1862.



These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

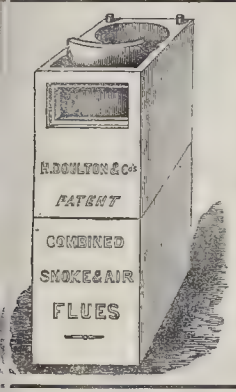
CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c. they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72—74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

THE DENNETT ARCH.



Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentee, England and Canada,

A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has the advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens, London."

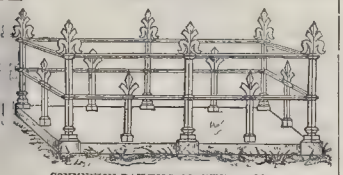
HENRY DOULTON & CO.'S

PATENT COMBINED SMOKE AND AIR FLUES.

BY THIS INVENTION PERFECT DRAUGHT AND COMPLETE VENTILATION CAN BE SECURED.

The air-flue follows the line of the smoke-flue, the passages being quite distinct. The heat from the smoke-flue causes a current, which carries off the vitiated air admitted by junctions near the ceiling. The pipes or blocks are *all made to bond with ordinary brickwork*.

Where the blocks come together, each air-flue has a lip or projection, which enters the next block and completely shuts off the air-flue from the smoke-flue at the joint. This lip, with dowels at the opposite corners of the blocks, also holds the lengths firmly together.



Curves are made to suit any inclination.

Manufactured in Terra Cotta for smoke-flues equal to 12 in. 10 in. and 8 in. diameter, with ventilating-flues of proportionate size.

Small models will be forwarded to architects on application to

Henry Doulton & Co. High-street, Lambeth.

IRON RAILINGS, for enclosing TOMBS AND GRAVES.

COMMUNION RAILINGS, SCREENS, GATES, &c.

HEATING APPARATUS upon the most approved Principles of Hot Water, Steam, &c.

5 & 6, PHILPOT LANE, LONDON, E.C.

Works: MARTIN STREET, STRATFORD, E.

THE FURNISHING of BED-ROOMS.

HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that in order properly (the splendid effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed room Furniture, beyond what they believe has ever been attempted, but also to provide several Bed rooms for the purpose of keeping complete suites of Bed room Furniture in the different styles.

Japanned Deal Goods may be seen in complete suites of five or six different colours, some of them light and ornamental, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will always be kept in stock, and from time to time new and select Furniture in various woods will be added.

Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large Stock of Bedding (HEAL & SON'S original trade) is fitted on the BEDSTEADS.

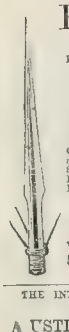
The Stock of Mahogany Goods for the better Bed-rooms, and Japanned Goods for plain and servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed-room Furniture as they think can possibly be desired.

Every attention is paid to the manufacture of the Cabinet-work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises.

They particularly call attention to their Patent Spring Mattress, the Somnifique Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.

HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed room Furniture sent free by Post. 196, 197, 198, Tottenham court-road, London.



LIGHTNING CONDUCTORS.

(SPRATT'S PATENT),

As presenting the MOST EFFECTIVE MEANS of OBTAINING SECURITY from LIGHTNING. They are economical, easily fixed, and APPLICABLE TO SHIPS and TO ALL BUILDINGS, including Private Houses, Churches, Chimney-Shafts, Dairies, Powder Magazines, &c. &c.

Price Lists and Estimates on application.

HART & SON, WHOLESALE & MANUFACTURING IRONMONGERS, 53 to 58, WYCH STREET, STRAND, LONDON, W.C.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.

ESTABLISHED 1744.

AUSTIN'S IMPROVED PATENT SASH and BLIND LINES.

To BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ironmakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS; SMITH'S PATENT WEATHER-TIGHT WATER BAR; and SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS:

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

HENDERSON'S PATENT DERRICK CRANE.—Prize Medals for Practical Utility and Moderate Cost.

HENDERSON'S PATENT DERRICK CRANE, so extensively used in the building of the Exhibition, London, can always be had from the Makers, from 10cwt. upwards, for Building, Foundry, Forge, Wharf, Quarry, Warehouse, and other descriptions of Crane; also Steam Winches and Cranes (on the Derrick principle). Water Companies and others can also be supplied with our Improved Sluice Valves.—For further particulars apply to BOWSER & CAMERON, Makers, Springfield Iron Works, M'Neil-street, Glasgow.

REDUCED PRICES OF BRYAN DONKIN & CO.'S

IMPROVED GAS VALVES,

With Wrought-iron Pinions. From 2 in. to 18 in. price 9s. 6d. to 12s. per in. diameter.

List of prices, with full dimensions of all sizes up to 36 in. to be had on application.

These Valves are all proved on both sides to 30lb. on the square inch before leaving the works, and are always kept in stock.

Valves made with outside racks to order.

Also Screw Water Valves, with gun-metal faces.

BRYAN DONKIN & CO. ENGINEERS. Near Grange-road, Bermondsey.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; Galvanized ditto, for Water; High-pressure Cocks, &c. Manufacturers of Dr. Arnott's Improved Ventilators. HULETT & CO. 55, High Holborn.

PATENT ASPHALTE CALDRON, for Laying Asphalte Floors in Manufactories, Barns, Workshops, Cottages, &c. Three times "Highly Commended" by R. A. Society. Made only by WOODS & COCKSEDGE, IRONFOUNDERS, STOWMARKET.

This floor is impervious to wet, and vermin will not touch it. Full particulars on application.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for the admission of Pure Air.

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London.

KAMPTULICON FLOOR CLOTH. DURABLE, COMFORTABLE, ECONOMICAL, and ORNAMENTAL, for CHURCHES, PUBLIC BUILDINGS, BILLIARD-ROOMS, and PRIVATE HOUSES.

GOUGH & BOYCE, 76, CANNON-STREET WEST, E.C.

MEDIÆVAL PAPERHANGINGS, from the Thirteenth to the Sixteenth Centuries. Designed by G. T. ROBINSON, F.R.I.B.A. Manufactured by WM. WOOLLAMS & Co. 110, HIGH STREET, near Manchester-square, London, W. May be obtained of the principal Decorators.

Extracts from notices in the undermentioned publications:—

"Conventionalized patterns, often displaying great beauty of form, characterize the examples sent to us. With a few exceptions, the colouring of the specimens is commendable, in many it is worthy of the highest praise."—*Athenæum.*

"The designs are exceedingly elegant, and the colours good and well arranged. Some of the patterns are of strictly ecclesiastical character, suitable for mission churches and oratories, or they may be used as accessories in church decoration."—*Church Builder.*

"The majority of the patterns are exceedingly satisfactory, and not expensive."—*Builder.*

"These designs are infinitely varied, yet always consistent and effective; the colouring is pre-eminently good, both in the selection of tints, and in harmonious combinations; and the quality of the paper is of the highest order."—*Art Journal.*

WHITE ZINC PAINT, 34s. per Cwt.

One hundredweight of pure Zinc Paint with three gallons of Linseed Oil, will cover as much as one hundredweight and a half of White Lead and six gallons of Linseed Oil.

Special Dryers for this Paint.

STUCCO PAINT, 24s. per Cwt.

This Paint adheres firmly to the walls, resists the weather, and is free from the glossy appearance of oil paint, resembling a stone surface, and can be made any required shade. It is mixed with rain or pure river water.

IMPROVED ANTI-CORROSION PAINT, 28s. to 34s. per Cwt.

Anti-corrosion paint is extensively used for all kinds of work in exposed situations, on Brick, Stone, Compo, Iron, Iron Bridges, Conservatories, Greenhouses, &c, and is easily laid on by any ordinary workman.

MILLED LEAD, IN SHEETS AND PIPES, OF ALL KINDS. OLD LEAD BOUGHT OR TAKEN IN EXCHANGE.

LIFT PUMPS, WATER CLOSETS, AND PLUMBERS' BRASS WORKS OF ALL KINDS.

NET CASH.

DESACHY'S FIBROUS PLASTER.

GEORGE JACKSON & SONS,

HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN

DESACHY'S FIBROUS PLASTER,

Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of diaper, &c ; for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality ; it is not inflammable, and is ready to be painted immediately after it is made ; it has been used (under the direction of Owen Jones, Esq.) for the ceiling of St. James's Hall ; at Messrs. Osler's, Oxford-street ; Mr. Hancock's, New Bond-street ; the Crystal Palace Bazaar ; the Home for the Aged, South Lambeth ; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

DESIGNS MADE FOR ANY WORKS.

LITHOGRAPHED DESIGNS OF CEILING FLOWERS, &c, SENT FREE ON APPLICATION.

CARTON PIERRE AND PAPIER MACHE WORKS, 49, RATHBONE PLACE, LONDON, W.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

MESSRS. THE FREEMAN AND CHEESEWRING GRANITE COMPANY (LIMITED).

OFFICES: — 13, PRINCESS SQUARE, PLYMOUTH.

Estimates for Granite, Polished, Dressed, or Scappled, will be forwarded on application to the Secretary, 13, Princess-square, Plymouth; Quarries at Penryn, Penzance, and Cheesewring; Steam Polishing Works at Penryn and Cheesewring.

London Orders Received at 27, Millbank Street, and 93, Cannon Street.

JAMES W. TYLER, CONTRACTOR FOR DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.

Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to his work done as his best recommendation.

Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.

That Zinc thus laid is quite as lasting as lead if the woodwork is arranged according to Mr. TYLER'S directions.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

THE LAND SECURITIES COMPANY

(Limited).
Capital, 2,000,000*l.*

Directors.

The Right Hon. the Lord Naas, M.P. President.

The Directors of the International Financial Society (Limited), acting as a Finance Committee.

Offices.—Chief Office, West End, 32, Charing-cross, S.W.; Branch Office, Office of International Financial Society, No. 61, Threadneedle-street, E.C.

The Company will make advances, repayable with interest, at fixed terms, or by instalments, or by terminable annuities, upon the security of—

1st. Orfanded estates, first-class house-property, and real property of all descriptions and tenures, and of all estates and interest therein.

2d. Tithes, dues, assessments, and impositions of all descriptions, levied or imposed by or under the authority of any Act of Parliament, public or private, Royal Charter, Commissions of Sewers, Drainage, or other Parochial authority on the owners or occupiers of land.

3d. Of charges and securities of all descriptions upon or affecting landed estate, and all real property and tenures, made, given, or issued, under the authority of any Act of Parliament, public or private.

For further information, and forms of application, apply to the Hon. WILLIAM NAPIER, Managing Director, the Land Securities Company (Limited), 32, Charing-cross, London, S.W.

FAIRER'S TURRET CLOCKS,

188, St. George-street East, London. By Special Appointment to Her Majesty the late Royal Highness the Prince Consort, her Majesty's War Department, &c. Maker of the Great Clock of the Tower of London. The Village Clock, price 40 guineas.

DENTS TURRET CLOCKS.—The attention of Public Bodies, Gentlemen, and others, is respectfully requested to the Improvements made in the Construction of CLOCK, suitable for STABLES, CHURCHES, and other Large Buildings, by the late E. J. DENT and F. DENT, Clock and Chronometer Makers to the Queen, and Prince Consort, and Makers of the GREAT CLOCK for the HOUSES of PARLIAMENT, &c. Turret Clocks, with Compensation Pendulum, adjusted for variations of temperature, to work the hands of dials of any size, from 1 foot to 30 feet diameter.

E. DENT & CO. 61, STRAND (adjoining Coutts's Bank); and 34 and 35, ROYAL EXCHANGE, LONDON.

STAINED GLASS for WINDOW DECORATION, GLASS MOSAIC and PAINTED OPAQUE GLASS for WALL DECORATION

J. T. LYON & CO.

13, BERNERS STREET, OXFORD-STREET, W.

Price lists, drawings, and estimates sent on application. Work executed on the most moderate terms compatible with excellence of design, material, and workmanship.

LEAD GLAZING for CHURCHES and other BUILDINGS, Plain Quarries, Geometrical Patterns, or Fret Work. Builders and the Trade are supplied with every description of Lead Lights and Window Lead, on the shortest notice and lowest terms, by F. ODELL, Plain and Ornamental Lead Glazier to the Trade, 3, Bath-street, City-road, E.C. Extra strong Lead for Churches, &c. Estimates forwarded on receipt of particulars.

STAINED GLASS, MOSAIC, WATER GLASS, and other CHURCH MURAL DECORATIONS.

MR. PREEDY,

13, York-place, Baker-street, Portman square, London, W.

STAINED GLASS WINDOWS for CHURCHES and DWELLINGS.

HEATON, BUTLER, & BAYNE,

New King-street, Covent Garden, W.C. Removed from Carlington street, Hampstead-road.

Specimens at the Exhibition of Stained Glass Windows, South Kensington Museum.

R. B. EDMUNDSON & SON, STAINED GLASS OF EVERY DESCRIPTION,

Ancient and Modern, for Ecclesiastical and Domestic purposes. Wall Painting. Monumental Brasses, &c. Designs and Estimates on application.—Specimens may now be seen at the Exhibition of Stained Glass, Kensington Museum, Nos. 25, 26, 27, and 28.

WORKS, NEW WAKEFIELD-STREET, OXFORD-STREET, Near the BRIDGE, MANCHESTER.

CRYSTAL WHITE SHEET GLASS.—WHOLESALE BRITISH and FOREIGN WINDOW GLASS WAREHOUSE.

British and Patent Plate, Crown, Sheet, Horticultural, Stained, Coloured, Ornamental Ground, Fluted, Rough Plate, Photographic, and every description of Glass.

Estimates and Price-lists forwarded free on receipt of business card addressed to

R. METTAM & CO.
30 and 31, PRINCES STREET, SOHO, LONDON, W.

THE PATENT CRYSTAL WINDOW BARS, adapted for domestic windows, shop fronts, conservatories, skylights, verandahs, exhibition and counter cases, aquariums, form cases, &c. &c. combining perfect transmission of light, durability, against rust or decay, and economy in the facility with which they are kept clean. Aquariums with slate or marble bottoms of various sizes, with or without fountains, also of glass. Manufactured by LLOYD & SUMMERFIELD, Park Glass-Works, Birmingham. All kinds of flint glass, cut and plain, coloured window sheet, optical sheet, coloured lenses, &c. &c.

STAINED GLASS and WALL PAINTING.

MESSRS. CLAYTON & BELL,

311, REGENT STREET, W.

Adjoining the Polytechnic Institution.

PURE SILVER LOOKING-GLASSES manufactured by NEW PROCESS.—Unequalled in brilliancy. Not liable to injury from damp, heat, or handling. EMBOSSED, ORNAMENTAL and PLATE GLASS, SILVERED, at MODERATE RATES.

PATENT SILVERING COMPANY (LIMITED),
7, LOWER KENNINGTON LANE, S.

PAINTED DECORATION and STAINED GLASS

CHARLES BLACKMORE,

372, EUSTON-ROAD, LONDON, N.W.

Designs and Estimates submitted.

SOHO PLATE and GENERAL GLASS WAREHOUSE, 26, Soho-square, W. and George-yard, Crown-street, Soho, W.C.

ALFRED GOSLETT begs to inform Architects, Builders, and the Trade generally, that every description of Glass required for building purposes can be procured WHOLESALE, either in STOCK SIZES or CUT TO ORDER, at his extensive warehouses as above.

SPECIAL ESTIMATES for the supply of LARGE QUANTITIES of Glass upon the receipt of particulars.

PAINTED GLASS WINDOWS and MURAL DECORATION

LAVERS & BARRAUD,

ENDELL STREET, BLOOMSBURY, LONDON, and 43, JOHN DALTON STREET, MANCHESTER.

GLASS.—W. H. JACKSON supplies BRITISH PLATE, PATENT PLATE, ROLLED PLATE, CROWN, SHEET, HORTICULTURAL, ORNAMENTAL, COLOURED, PHOTOGRAPHIC, and every description of Glass, of the best manufacture, at the lowest terms.

Lists of prices and estimates forwarded, on application at the Warehouse, 315, Oxford-street, W.

The Builder.

VOL. XXII.—No. 1122.

The Thames Embankment.

IN describing the work of the Thames Embankment of the Middlesex side, we shall find convenience in dividing it, after the manner of the engineer in specifying the sewerage, into general and "special" construction. The first division will include the river-wall from Westminster to Whitefriars, —of one design throughout, or excepting where the *special construction* occurs, and now in progress, — and also the portion of the Low-level Sewer, the subway and the roadway, of the same length; the latter will include the steam-boat pier at Westminster Bridge, the two steam-boat piers at the Charing-Cross Railway Bridge, the two at Waterloo Bridge, which were shown in our view last week; the pier and landing-stairs near the Temple; the "York Gate" landing stairs opposite Whitehall Gardens, the stairs opposite Salisbury-street, the work for the maintenance of Waterloo Bridge; that for the outlets of the Victoria, Regent-street, Northumberland-street, Savoy-street, and Essex-street sewers, or storm-water outfalls; the junction of the Northumberland and Craven-street sewers; the different chambers, weirs, penstocks, and flaps; sewers of interception (almost as long as the sewer in the Embankment); work to the minor sewers and drains now discharging landward of the line of Embankment, which are something near fifty in number about the Temple alone; and the details of sewer-entrances and ventilating-shafts. Of one great division of the special construction, that just referred to, which is connected with the old sewers, some idea may now be gained on looking from the end of Norfolk-street, or the present Temple Pier, at the heavy work which is in progress between tides. Here also, the best idea may be formed of the earthwork of the Embankment, which is far advanced. It has been the cause of serious obstruction to the traffic of Fleet-street, but will materially aid the contractor's operations connected with the old sewers, by keeping out the tide. Still reserving notice, further than was given in our review of drawings in the Exhibition of the Royal Academy, of the decorative features of the piers and stairs, and description of much of the special construction, we proceed with our account of the works of the general division. Since the first stone was laid, the main intercepting, or Low-level, sewer has been commenced; but, necessarily as yet, the portion of the work is confined to the bit of the length of the Embankment, where the coffer-dam was constructed for the purpose of laying the stone. The general coffer-dam arrangement in the length of Mr. Furness's contract (for which Mr. T. Lovick is the resident engineer), will be different to this special construction, and less costly. We publish this week, a plan and section showing the special construction, as well as the river-wall, sewer, and subway, and serving also towards the explanation which we shall give of the general construction of the coffer-dam, or dams, in the length between Westminster Bridge and Somerset House.* In the plan, a portion of the return of one of the sides is broken off, our page not being large enough; and it must be distinctly understood that the old method of coffer-dam construction with a double row of sheet-piling and clay-puddle is, as to Mr. Furness's contract, confined to the one spot where there was a particular purpose to be served; though the new and more economic system makes use of the iron caissons in the line, on plan, in which we have shown them.

Before deciding upon the precise structure of the permanent Embankment, and the appliances which might be available in the work, it was necessary to consider the soil and substrata of the Thames. The deepening of the river-bed, commencing after the removal of old London Bridge; the failure of old Westminster Bridge and Blackfriars Bridge, from this cause; a certain apprehension as to Waterloo Bridge, and the expectation of an increased scour after embankment, have pointed to the necessity in all future structures on the Thames, for foundations laid at considerable depth. There has been some difference of opinion as to the necessity for going down to the London clay; and it has not always been clear at what depth the clay would be met with. Mr. Brunel, for the piers of Hungerford Bridge, which are at present the brick piers of the Charing-cross Railway bridge, chose to build upon the gravel; whilst Mr. Page, by a peculiar method of construction, in the case of new Westminster Bridge, may be said to have founded his piers partly on the gravel, and partly in the clay. Prior to the completion of the Westminster Bridge, certain referees of the Government, had reported strongly in favour of foundations in the clay, at whatever inconvenience and cost of a coffer-dam of the old form, which was adopted by Mr. Brunel in Hungerford Bridge; and was even used, by Mr. Fowler, more recently, in the case of the bridge for the Victoria Station and Crystal Palace Railway.

Mr. Bazalgette, however, has been served by inventions which have been attentively watched in these pages; he was able to decide upon dispensing with coffer-dam construction of the kind used on the building of the Houses of Parliament; and his work, or that of the contractors, has been further served by inventions of the last few months. At the commencement of last year, indeed, as shown by a report to the Metropolitan Board, he was able to decide upon a system of excavating within a "connected line of iron caissons," which were to be sunk below the bed of the river, to be filled with Portland cement concrete to within 6 ft. of low-water level, and to be otherwise "so constructed as to form a full tide dam." The work was to "be carried on in short lengths, so that the upper portion of the dam above low-water" could be removed on the completion of each length, and used in the formation of the one adjoining. The particular caisson now used in Mr. Furness's contract is the invention of a different engineer; but the date and authorship of the original suggestion seem to have been forgotten. At the date to which we have referred, Mr. Bazalgette was of opinion that a sufficient foundation could be obtained "upon the lower portion of the bed of gravel, at a depth of about 14 ft. below low-water mark, and 10 ft. above the London clay," which he said was "reached at a depth of about 42 ft. below Trinity High-water Mark," the gravel above "averaging from about 15 ft. to 25 ft. in thickness," and varying in coarseness and character, and the river-mud and sand averaging about 7 ft. We have some difficulty in exactly reconciling this information, said to be derived from the thirteen borings which had been made, with the sections given with the contract drawings, and each with experience in the works as it has been stated to us. However, at the starting-point near Whitehall Stairs, all the observations of facts seem to have been accordant; whilst, though perhaps exceptionally, the concrete foundation is there in the London clay.

Impermeability, as that of clay, or even of some portion of the Thames mud, constitutes a great advantage in sinking cylinders or caissons, safely and economically. The original method, introduced in France by Triger; subsequently used in the construction of Rochester Bridge, and afterwards with improvements and simplifications, for the piers of the Rhine Bridge, at Kehl, and the bridge at Argenteuil, near Paris, was the compressed-air system, or that of the diving-bell. We gave particular attention to it in 1862, in one of our articles on the Exhibition of that year. In sinking the cylinders for the Charing-Cross Railway Bridge, the compressed-air system was dispensed with; and the cylinders were sunk by the aid of divers, working inside, until such time as the cylinder had reached the clay, when it could be pumped dry, and the work be continued with comparative ease. In subsequent works, as Lambeth Suspension Bridge, the Railway Bridge at Blackfriars, and the bridge to the Cannon-street station of the Charing-Cross Railway, the compressed-air system has in like manner been unnecessary. In the last case, divers have not been employed; and the material from within the cylinders has been raised most economically by dredging. In the construction of the Cannon-street bridge, also, the weakness of the square form of caisson used in the abutments, as compared with the circular form used for the piers in the river, was established. Each of these matters of experience prior to the commencement of the Thames Embankment, has proved of much value. It was especially advantageous to be in the position to apply cylinder construction,—or that which is the actual construction, and which differs from the cylindrical only in form, and in the introduction of a method of junction, and to have at once a water-tight enclosure, and the means of depositing concrete in the caissons, as well as at the back of the wall, on the dry bed. Portland cement concrete will of course set under water; and for the foundations of Westminster Bridge, the material was deposited without pumping out the water, as it was at first in the case of the work of the Embankment. But there may be some advantage in cases where the concrete has to fill a particular space, in seeing that the space is filled. Therefore, as the water can be pumped out of the caissons, the practice now is to lay the concrete on the dry bed. Even though the cutting-edge of the cylinder, or caisson, may not have got down to the clay, the mud on the bed of the river is found to act as a lute, or like a leather washer, and to prevent the water from getting down to the bottom of the caisson, and rising within it.

It is time, however, to describe the form and dimensions of the permanent work, and the actual construction of the coffer-dam. And first of what will be permanent. Our section shows this, as well as the caissons forming the front of the general coffer-dam construction, and also the special coffer-dam construction in the single case of the spot near Whitehall Stairs. The permanent work includes not only the retaining-wall, sewer, and sub-way, and their foundation as shown, but the lower portion of the caissons; which last, filled with concrete, becomes an effi-

* See p. 582.

cient fender to the toe of the wall. This last-mentioned arrangement, and that of these iron caissons generally, has not been adopted up to the present time in the work in Mr. Ritson's contract, extending to Whitefriars, as will be shortly explained. Mr. E. Cooper is the resident engineer for this second contract.

The foundations of the river-wall were specified as to be carried down to 20 ft., at the least, below Ordnance datum, that is 32 ft. 6 in. below Trinity high-water level, or 14 ft. below low-water level. From that level, or the additional depth that might be required, the trenches were to be filled with concrete to 12 ft. 6 in. or thereabouts, below the datum (that is, to 6 ft. 6 in. below low-water level); and a bed was to be dressed to the proper slope and level for the footings of the brick wall. The recommendation of the Commission of 1861, as to an uniform low-water channel of 6 ft. in depth at ordinary spring-tides, is not followed. In the lower part of its course, or from Whitefriars to the Victoria-street sewer, which is just above the Charing Cross Railway Bridge, the Low-level sewer is to be 8 ft. 3 in. in clear diameter, and to be formed in brickwork of 13½ in. thick. To Westminster-bridge it is to be 7 ft. 9 in. in the clear. At the western extremity of Mr. Ritson's contract, the invert of the sewer will be, at the lowest part, 6 ft. 3 in. below Ordnance datum. The fall will be that generally adopted as the minimum, 1 in 2,640, or 2 ft. per mile. The sub-way will be over the sewer, with an interval of about 4 ft., and it will be 9 ft. in width, and 7 ft. 6 in. in height to the crown of the arch, and 3 ft. in the straight sides. The crown will be 2 ft. 1½ in. below the surface of the footway, which surface is 4 ft. above high-water line. The floor of the sub-way, to be gravelled, is to be about 5 ft. 6 in. below high-water, and is to be on a level, excepting where it crosses certain overflow-chambers near to Waterloo-bridge.

Besides the backing of brickwork to the masonry, as shown, there are 18-inch counter-forts of brickwork specified, intersecting the whole construction, six feet apart; the spaces left about the sewer and subway being filled with concrete. And there is an alternative method of construction, shewn in the drawings, wherein there is no backing of brickwork, the entire space being filled by concrete; which would be some of it in blocks.

A counterfort, 3 ft. thick, will be built over the arch of the sub-way at the back of each of the lamp-pedestals to receive the washer of a long mooring-bar which passes through the whole construction, and is attached to the mooring-rings upon the pedestals. Each ring, which is of cast and hammered gun-metal, will appear as held in a lion's mouth. There will be 58 of the lamp-pedestals and mooring-rings, besides those at the steamboat piers and landings.

The river-wall will be faced with granite, to a curved batter, from 2 ft. below low-water mark to about 1 ft. 6 in. below high-water mark, where there will be a chamfered plinth and surbace-mouldings, to a plain face of about 2 ft., forming the sub-plinth to the parapet, which will be formed with regular dado, plinth-mouldings, and cornice, projecting however but slightly on the inner face. The surbace-mouldings start from high-water level, as well as the block-pedestals for the lamps, by which the horizontal lines above the chamfer are cut. The parapet will be formed as a balustrade only where steam-boat piers and landing-stairs occur. Particular and judicious directions are given as to the masonry; which will contribute to the decorative effect. Joints are not to exceed one-eighth of an inch in thickness. The stones of the parapet, and those above a given level, are to be dowelled together in beds and joints with slate dowels each 2½ in. square.

Similar precise directions are given as to other divisions of the work, and for testing the materials. They may be suggestive as precedents.

The cement used is all to be Portland, ground extremely fine, and weighing not less than 112 lb. to the imperial (striked) bushel. It is to be brought on the works fit for use, and is not to be used until it has been on the ground three weeks at least, nor until tested, samples being taken out of every tenth sack, gauging the samples in moulds, and by apparatus similar to that heretofore used by the Board, placing the cement at once in water, in which it is to remain for seven clear days, and testing it at the end of that time by application of a weight. All cement that does not bear without breaking, 500 lb., is to be rejected. Lime that may be required is to be blue lias, from the lower beds, equal to Aberthaw, fresh from the kiln, and ground on the works in mills under edge-runners.

The concrete is to be formed of one measure of Portland cement to six measures of ballast, for the foundation works, and one of cement to eight of ballast for other works. The mixing is to be done by machines, generally: should any be allowed by hand, only six of ballast must be used. And should lime be used, one measure of it to six measures of ballast will be required. If concrete in blocks be required in place of the brickwork, there are to be seven measures of ballast to the one of Portland cement. But no such blocks are to be used till they shall have been made for three months.

The cast-iron is to be the best grey cold-blast pig-iron, free from cinder, mixed with one-fifth of best scrap-iron, and re-melted in the cupola. Bars, 2 in. deep and 1 in. broad, are to be cast for testing; and, placed on supports 3 ft. apart, are to bear without breaking 3,200 lb. in the centre. The wrought-iron, the best Staffordshire, is to bear 22 tons per square inch. Castings and wrought-iron are to be delivered free from paint; and all iron so sent, or with plugging in any part, will be rejected.

Sums amounting to 30,000*l.*, for ornamental figures and lamp-standards, are included in the contracts, as well as 22,500 cubic yards of extra Portland cement concrete, and similar items, and besides 75,000*l.* for meeting expenses of extra works not included in the specifications.

Relative to the ballast, or like material, for the backing of the Embankment, the specification in each case, says that if the contractor does not obtain the material "by the means aforesaid" (that is from the Conservators of the Thames, directly, or through the Board, or by raising the ballast himself from the river on the order of the Board), he shall obtain proper materials from other sources.

On delivering up the works, he is to return all drawings and documents before receiving the instalment payable; and the engineer and his assistants are to have always access to such documents.

As to the adjustment of claims for extras, the contractor is, within seven days after the signing of the contract, to deliver to the engineer full and true bills of quantities, with the rates and amounts of each item, or to incur a forfeit of 10*l.* for each day's delay; and, as to day-work, a precise account is to be kept, with the names of the workmen; and the account is to be given in daily,—the engineer, however, having power to decide whether the work is extra, and not capable of measurement. The contract is not to be assigned, or underlet; or there is to be a forfeit of 20,000*l.* There are numerous other conditions, bringing each contract to near a hundred clauses. The larger contract is to be completed in two years and six months, and the eastern contract in two years, from the time of commencement; or one per cent. on the amount of tender is to be deducted for each week's delay; though an exception is made as to strikes. A lengthy schedule of prices forms part of each document. In the day-labour, bricklayers, masons, carpenters, and smiths, are set down at 6s. 6d., excavators at 4s. 6d. or 4s., and labourers at 3s. 9d.

All mud and deposit from the foreshore, between the new line and the existing river-walls, is to be removed, as may have been understood; and the filling in with ballast, or other material, is to be brought to levels varying from 15 ft. above Ordnance datum, for a width of 120 ft. at the back of the line, to 13½ ft. for the remainder of the width.

As regards the system of coffer-dam, each specification said that the Embankment-wall was "to be formed with iron caissons, or coffer-dams,"—the latter expression doubtless referring to the old kind of construction,—as the engineer might direct; but, actually, each contractor has been allowed to adopt his own system, subject only to the original stipulation that "should caissons be adopted," "the backs and fronts" thereof were to be left in the ground, up to a level of 8 ft. below datum; and that should coffer-dams be adopted, the whole of the piles were to be cut off to a level which was to be pointed out,—and so, we may suppose, as to produce the same effect as that anticipated from the protection in the other case, by the caissons where filled with concrete as shown in our section. Mr. Ritson adopted the old system, and has used it for a considerable portion of the work, as may be seen. In driving piles through the bed of the Thames, however, cement-stones are apt to be met with; and the shoes of the piles get broken, and the timber blunted. Sometimes where, as supposed, there are no stones, and in case of piles that have had to be drawn for the purpose of driving afresh, the piles are found with the shoes broken off by the tenacity of the clay. These difficulties may not be important where piles are at considerable distances, as for staging for travelling-cranes; but, in the case of sheet-piling, they are very important, as increasing delay and expense. Mr. Furness has therefore adopted the arrangement of caissons shown in our plan and section; and Mr. Ritson may be at last obliged, for the sake of speed and economy, to adopt not the same system, but one equally making use of iron instead of timber. To this system, patented by Mr. R. P. Stockman and Mr. J. Sheppard Scott, we may give attention.

But we may mention that, as shown by drawings now before us, and as succinctly stated by one of the patentees, the nature of the invention is to sink cylinders, 8 ft. diameter with 10 ft. spaces between them, into the clay, the cylinders to be filled up, solid, with concrete; and upon them a massive and rigid system of cast-iron girders and plates, with caulked joints, is to be lowered in place complete, forming a "sealed platform." Round the margin of the platform there will be vertical sides and ends similar to those of an ordinary tank; and in the dry chamber thus formed the wall will be erected. When the portion of the wall inclosed is completed, the tank-sides and ends will be removed and the wall remain, founded on and inseparably connected with the massive platform, the whole being supported by the solid and numerous pillars of concrete in cylinders sunken down into the clay.

We have here only to complete an account of the system adopted by Mr. Furness.

It has been arrived at after several experiments. In one method, put aside, caissons of oblong shape on plan, were used. Each division was cast with a hemicylindrical indent down each end; so that when the ends of two divisions were brought together, a whole cylindrical space was formed; and this was intended to be filled with clay-puddle. Why these were discarded, we are not aware exactly; but from the form, and the manner in which they were made up in pieces, they were greatly wanting in the strength of the caissons adopted, which, moreover, are most conveniently fitted end to end, carrying on a line of them.

These latter caissons were contrived by Mr. Joseph Phillips, of Messrs. Cochrane's establishment, who has had the management of the sinking of the cylinders for the Charing-Cross Railway Bridge and the Cannon Street Station Bridge. They have an elliptical shape on plan, are 12 ft. 6 in. by 7 ft. outside measurement, and have a groove 6 in. in width and depth at each end. This groove, along with a similar one in the butted end of the next caisson, is to receive the timber pile which forms one of the guides to the descent of the caissons, as well as a joint, water-tight with packing. Each caisson is built in divisions of 4 ft. 6 in. in height; which are of wrought-and-rivetted boiler-plate iron, where to be below the bed of the river, and there left in, and of cast-iron, where above and intended merely to serve the purpose of the coffer-dam. There is necessarily a "cutting-edge" at the bottom of the pile or stack: but the other joints of the caisson are formed with angle-iron, or flanges; so that the divisions can be screwed together, inside, and with a packing of felt and tar to the joint, can be made water-tight. The thickness of the metal is ⅜-in., or 3-8ths; and the angle-iron is 5 in. by 3 in. by 5-8ths of an inch. The grooved portion of each of the lower or permanent caissons was, at first, made of cast-iron: but now, plate-iron is bent to the shape; so that, the whole of the division is of one material, as just now explained.

Before building up and sinking the caissons, the line of the face of the embankment is first got approximately, but with sufficient accuracy for the coffer-dam construction we are describing. About the middle of the length from one bridge to another, a point is fixed in the rear of the general line of staging, and marked by a pole or wand, set up on a small staging erected for the special purpose. The lines from this point, to two points on the bridges, form a large angle, in which the principal curve, which is of 9,000 ft. radius, is found by offsets. These are taken every 50 ft., that is to say, at the end of every length of four caissons. With the aid of the staging and travellers, partly shown in our illustration, the end guide-piles are

driven, as well as four others at the sides of the space which will be filled by the caisson. Whilst this is going on, the lower divisions of the caissons are being bolted together. These are then raised by the steam-crane, and dropped into the intended position on the river-bed, being guided by the piles. The end-pile is driven below the bottom of the caisson, which sinks slightly into the mud or soil by its own weight; and this pile is kept driven in advance of the sinking, so as to form a perfect guide. The caissons are then weighted at the top, and inside on the flanges, by numerous blocks of iron, each of which fits the curve of the ellipse. The materials of the strata, when not too hard, are scooped out of the inside of the caisson by the common contrivance called the "bag and spoon," which is used by ballast-heavers. It is simply a bag made of thick leather, and attached to a scooping-edge and a strong frame-work of iron. This "spoon" is drawn along by a chain, and guided by a strong pole, placed as the handle of the "spoon." In other cases, a common dredging-machine with the buckets working perpendicularly is used. A modification of the usual form of bucket has been made by Mr. Slater, one of the assistants of Mr. Furness. This bucket has a species of "false bottom," which is moved as the bucket is delivering its contents; whereby there is no sticking, and no duty of the machine lost. The improved machine to which we are referring, also includes an arrangement for lengthening, telescope-fashion, the stretch between the centres of revolution, or points of filling and delivery of the buckets. Much information on dredging machinery, and other contrivances, may be found in the "Recueil d'Appareils à Vapeur employés aux travaux de Navigation et de Chemins de Fer" of Mons. A. Castor, a work already noticed in these pages as containing illustrations of the method of putting in the foundations of the Kehl and Argenteuil bridges.

The dredging contrivance, whichever it may have been necessary to adopt, scoops up the gravel or other material from the middle of the elliptical space; the material from the sides keeps falling in; and the weight causes the caisson to sink. Any fresh lengths of the caisson are built on to make up the height required. As soon as the clay is entered, or even when the mud has been passed through, the caisson can be pumped dry. Murray's chain-pumps are used. By a simple contrivance, weight can be taken off at the moment when the caisson shall have sunk to the proper depth. Thus the top of the permanent work at the toe of the retaining-wall, will be everywhere level, without an additional division having had to be sunk to make up for descent of the lower divisions farther than the intended levels of the three to be filled with Portland cement concrete, in the manner already referred to, and as they are shown in our section. The labour of putting together and sinking one of these caissons, it has been found, occupies a week.

So far, here, we have only got the explanation of the frontage of the great area to be reclaimed, or appropriated to the retaining-wall and the other permanent works described, and of which area the greater part is still covered with water at every tide. It must be recollected however, that the area is at present being reduced by the large quantities of material which are daily being tipped; and shortly, even at high-water, there may be little more to be dealt with than the width of the construction shown in our section. Towards such period, convenient lengths of say 100 or 200 ft. of the line, will be inclosed by return-ends, either of ordinary cofferdam construction, or as the contractor may find best. Indeed, it is thought that a single row of sheet-piling might answer, with the earth thrown against it. However this might be, the inclosure being complete, the tidal water would be allowed to flow out; and then the large area would be kept dry as an ordinary cofferdam; and the foundation for the wall would be laid on the dried ground. Some method of sheet-piling however, parallel with the line of caissons, would be necessary for the support of the concrete backing; and brick counterforts on the land side, which are not shown on the drawings, would seem to be called for. It has been suggested that the particular construction adopted, allows no means of escape for the land-water which at present filtrates to the river; and that there may in that particular be advantages in the system, the old one, of timber piles, as adopted by Mr. Ritson; albeit the advantages of the solid protection to the toe of the wall in the other case are obvious.

On the completion of such length as we have referred to, of the wall, the upper divisions of the caissons,—those which are of *cast* iron, and not filled with concrete,—will be removed, and will be serviceable in another similar length of the work.

The coffer-dam construction, the backing to the wall, and the intercepting sewerage, are now making very active progress: about a month ago, Mr. Bazalgette's report stated that there were twenty-five steam-engines at work on one length, that contracted for by Mr. Furness, and seven steam-engines on the other; but after the years of discussion, it becomes almost surprising to see how rapidly the Embankment can be realized.

THE BASILICA OF ST. LAWRENCE, ROME.

The restorations, begun in the winter of '63-4, at the extramural basilica of *S. Lorenzo*, recall our attention to that fine old church, belonging to so many different periods, and connected with so many legendary as well as historic traditions. It is gratifying to learn that the project of the architect, Count Vespignani, is to renovate this edifice in a style in harmony with its older characteristics, throughout the details of the work entrusted to him, not to admit any new *norma* in the designs to be here carried out. If this intention, as officially stated, be really acted upon, the result will prove a happy exception to the generality of public works, where the antique has been, one cannot say *restored*, but rather disguised by modern undertakings in Rome. The architecture of recent growth within this city displays an incapacity to understand or feel the spirit of the Middle Ages; and in the metropolis of the church we have constantly to regret the ignoring of that which is noblest in the artistic expression, in the splendid external developments of Catholicism. The showy edifice, more Pagan than Christian, built for funeral rites in the centre of the great Cemetery (within late years much enlarged) adjacent to the above-named basilica, is an example of this. Another (still less excusable) is the Greek façade (by the architect, Guglielmutti) more like a club-house than anything sacred, thrown up before *S. Salvatore in Tauro*, a church of the fifteenth century, with unscrupulous sacrifice of a fine old façade, dating 1450, whose marble portal, with clustering pilasters, and *couchant* lions guarding the entrance at each side, were swept away, a few years ago, as so much useless material. Not long before the publication of the admirable *Beschreibung* (1836), by Bunsen and other German *savans*, the Mediæval cloisters of *S. Saba*, on the Aventine, were despoiled of their spiral and fluted marble colonnettes, resembling those in the cloisters of St. Paul's and the Lateran, to be replaced by supporters of wood! But it is vain to multiply the examples of what is manifest around us in the course of our studies of sacred antiquity at Rome, wherever we turn.

S. Lorenzo received its nucleus from an oratory built by Constantine over the tomb of the martyr St. Lawrence, in those catacombs excavated below this church which are mentioned by Prudentius in his hymn to the honour of St. Hippolytus. After this chapel had been embellished by different popes, and perhaps rebuilt by the Emperor Theodosius, it gave place to a stately basilica raised by Pelagius II. towards the end of the sixth century. At a later period, another pope, Adrian I. (as conjectured in the year 792), so enlarged this, that the earlier became the tribune or choir of the later church; and about the beginning of the thirteenth century a general restoration was effected, with new façade and portico, by Honorius IV. The actual building proves, as is observed by Bunsen, more perplexing than any other of Rome's churches; for though the point of separation between old and new (the sixth and thirteenth centuries), is sufficiently marked by the chancel arch, the architectural lines of the different sections do not correspond; and much alteration has been caused by the fatal interferences of modern restorers. On a frieze over the Ionic columns of the portico, is exemplified the manifest decline of mosaic art in some small figures, belonging to the time of Honorius III., representing the Saviour between St. Lawrence and a mitred prelate, probably that pontiff himself. Round the walls of this portico, and on the corresponding side of the nave internally, extends a most curious series of frescoes, representing the histories of St. Stephen and St. Lawrence, the coronation performed in this church by Pope Honorius of Peter de Courtenay, Count of Auxerre, and his wife, as Emperor and Empress of Constantinople; the communion of that Emperor from the hand of the Pope; and other legendary subjects. The tribune is the finest part of the interior; and its double colonnade of fluted pillars in Phrygian *pavonazzetta*, a magnificent example of the spoils applied from Pagan to the adornment of Christian edifices. We are here in the ancient church of Pelagius II., which, Ciampini supposes, had its entrance at what now forms the eastern extremity of the church, between two superb Corinthian columns still erect behind an episcopal throne and screen-work richly inlaid with coloured marbles; but Bunsen shows that, owing to the slope of the hill, cut away on this side for giving place to the buildings below, such could not have been the original plan. Over the chancel-arch, on the inner side, are the interesting, but much-injured mosaics of the sixth century, partly restored in indifferent painting: the Saviour, of youthful, but stern aspect, seated on a globe; to His right SS. Peter and Lawrence, and Pope Pelagius holding a model of this church; to His left, SS. Paul, Stephen, and Hippolytus, each holding either a book or a crown,—earliest symbol of martyrdom; the costumes, simple and classic; St. Peter distinguished by a wand (symbol of authority) in his hand; as also in that of the Saviour is held the wand implying distinct assertion of power and dignity. At the extremities of the two groups are the mystic cities, Jerusalem and Bethlehem, their names inscribed, as all these figures likewise have written names.

Most interesting, among other artistic objects in this church, are the two lofty ambones, opposite each other at about the centre of the nave, both alike rich in inlaid marbles, porphyry and serpentine,—perhaps the finest specimens of such Mediæval decorative work that Rome's sacred buildings contain. In other respects this interior is characterised by all the sombre severity and massive simplicity of forms peculiar to the early basilica. It impresses by attributes of antique, but somewhat sterile dignity; and the dim light admitted through narrow-arched windows, opening in the high attic above long lines of architrave, enhances the effect of the gravely harmonious *ensemble*. Whether this primitive character will be preserved intact by the restorers now engaged here, we may well doubt; nor do all details, in what is already complete, bear satisfactory promises,—for instance, the building up of several of those old windows, with concealment of their plain but curious tracery, and opening of others, much wider, in the intervals between them.

Under the high altar, in the dim-lit confessional, repose the relics of St. Stephen and St. Lawrence; the former first brought from Jerusalem to Constantinople by the Empress Eudocia, in 439; and, about 557, obtained by a Papal legate for Rome. Legends state that when the body of the protomartyr was laid beside that of St. Lawrence in this shrine, the latter moved to one side, giving place to so venerable a companion in death; also, that when this shrine was opened during the progress of the buildings of the sixth century, by workmen who unexpectedly found it after the precise spot had long been forgotten, all were punished for the unconscious sacrilege by death within ten days following, though none had dared even to look upon that sacred treasure. The antique church had been in the greater part filled up to form a solid foundation to the actual choir, elevated considerably above the nave; and from this higher level we look down to the bases of the classic columns that rise from the pavement of the earlier building, in that portion left for centuries useless. It is the best object proposed in the restorations now progressing, to clear out this lower and most venerable sanctuary around the shrine where the two martyrs repose, and give it back to the purposes of public worship.

Considering monuments as indices to the story of mind, we cannot pass unnoticed the series of frescoes in this basilica's porch, so full of meaning and importance, because fraught with the spirit of the past. Agincourt classes them among productions of the Greco-Italic school in Rome, probably from the period of Honorius IV., or but little later in the thirteenth century. We may begin with those on the lateral wall to our right before entering the church. A holy hermit was at prayer one night in his cell, when strange noises, like the tramp and shout of horsemen

passing by in tumultuous haste, aroused his attention, and led him to ask, leaning out of his narrow window, who thus disturbed his meditations at that hour?—"We are demons," was the answer. "The Emperor Henry has just expired, and we are bent on attaining our object by taking possession of his soul."—"I conjure thee," said the hermit, "to appear again to me on your return, and announce how you have fared in this serious business." The promise being given, that phantom-troop swept by; but the night had not waned before similar noises again disturbed the hermit, this time attended by violent knocking at the door.—"Now, tell me," asked the holy man, "how has it fared with the emperor?"—"Desperately ill," replied the demon, speaking from *his* point of view. "We came just in time. The emperor had that moment expired, and we began the asserting of our claims, when his good angel appeared, bent upon saving him. Our contention was long; but at last the angel laid the good and evil deeds of Henry together in a balance; after which for a time, our joy was great, seeing that on our side the scale sank visibly to the ground; but all at once came up that roasted fellow [thus did the evil one describe St. Lawrence], with a heavy golden pot in his hand, which he threw into the opposite scale, so that the other was made to kick the beam. We were thus forced to return in shame and confusion; and I could only vent my rage on the golden pot, one handle of which I broke off." After the discourse the demon troop departed, and the hermit could scarcely wait till morning to start for the nearest town, where the emperor had been residing in his last days, and had died. On arriving, he learned that Henry II. had expired, precisely at the hour of the first apparition before his cell, and that it had just been discovered how a gold chalice, presented by Henry to the church of St. Lawrence in that town, had unaccountably lost one of its handles.*

THE ARCHÆOLOGICAL INSTITUTE AT WARWICK.

If the most despairing Conservative, excited by what he might consider the progress of democratic institutions, would but refer to the papers to see the prices given at the recent sale of Mr. Daniel's for works of antiquarian value, he might be much relieved by the indication it gives of the increased desire to preserve the memorials of the past, and to cherish all that was good in old England. If he were not convinced by this, he should have attended our meeting at Warwick, where additional and unmistakable evidence was furnished by the ready assistance given by the inhabitants of the town and county to the object we had in view, and in the noble pride with which they have preserved, and in the honour they claim for, their monuments.

A more appropriate spot than Warwick for an illustration of the past could not have been chosen. In spite of railways and other transformers, it still retains the character of a town clinging round the castle of its feudal lord for support. A student could not find a calmer retreat: no bustle of business; no noisy children at play; and, whether this is owing to Mr. Bass's Bill cannot be said, not a single organ have I heard during the week. When I took a walk round the town the day before the meeting, not a footfall was to be heard, and the silence was something solemn and awful. A joke has been circulating among us, that a commercial traveller who arrived at the town for the first time inquired what the name of it was, and being told Warwick, he replied it would be a very pretty place if it had any inhabitants. It used, perhaps, to be a little more cheerful once, as there was a theatre; but upon the old principle, I suppose, of "the nearer the shrine," it has been converted into a police-station. However, the quiet of the town was amply compensated by the warmth and cordiality of our reception.

On Tuesday the inaugural meeting took place at the Assembly-rooms, where a flattering address of welcome was presented to us from the Corporation. The Marquis Camden resigned the office of president, and it was assumed with a warm-hearted speech by Lord Leigh. The usual routine of complimentary remarks was then gone through. The Bishop of Oxford made a "right merrie" speech, but impressing the necessity of studying the "velvety shadows of the past to enable us to live in the present and to anticipate the future." Mr. Bloxam then gave us a synoptical history of the county of Warwick, pointing out the most salient points of history, and directing our attention to the principal monuments that remain to illustrate it. A paper by Mr. Winston "On the Glass in the Beauchamp Chapel," was read by Mr. Petit. The author apologized for its being "necessarily dry and technical," as, judging by the emptying of the room, so the audience thought it. But there is a disadvantage in not reading a paper of this sort at the spot which it intends to elucidate. On the breaking up of the meeting we visited St. Mary's Church, which was briefly explained by the Rev. Herbert Hill, and we then entered the Beauchamp Chapel. Some complaint was made that no one was there to make any communication about it, but Mr. Gough Nichols justly replied, that "all information as to dates being given it would be better for every one to observe for himself;" a principle that may be often usefully laid down to prevent trivial discussion.

We then proceeded to visit the hospital founded by the Earl of Leicester in 1571, for the reception and support of twelve old soldiers or sailors and their wives. It is a most interesting specimen of a timber building of the period. Much of its ornamentation, in the shape of the escutcheons of the founder and his family, are modern. It is a gratifying thing to find that here the spirit of the founder is carried out more and the trust more sacredly fulfilled than with some charities. The income, which at the time of its foundation was about 200*l.*, now amounts to about 3,000*l.*, and the allowance to the brethren is now 80*l.* a year; and when sufficient accumulation has taken place the number of brethren is to be increased to twenty. It may tend to soften the indignation of those who only know Leicester from Sir Walter Scott's "Kenilworth" to learn that, though he feasted the queen, he "ne'er forgot the poor." There are preserved some pieces of embroidery, one a crest of a "bear and ragged staff," the other like a slipper before taken from its frame and made up, said to be worked by Amy Robsart when she was at Kenilworth. Whether this is on the authority of Scott, I don't know. We then went to view the remains of the ancient walls. At the evening meeting Mr. Bloxam, who was ever ready with his very valuable information, the result, evidently, of much study, read a paper on the "Sepulchral Monuments of Warwickshire of the thirteenth and fourteenth centuries;"* and the Rev. J. R. Green read a memoir on the siege of Kenilworth, a well considered paper, abounding in evidence, which he gave in the original Latin, and as on this occasion the majority of the audience was ladies, it is not for me to say whether they were interested or convinced.

On Wednesday there was a meeting of the historical section, when the Rev. C. H. Hartshorne read a paper on the "Parliament, or the Dictum of Kenilworth," travelling over a great portion of the ground occupied by Mr. Green on the previous evening, but with different conclusions. As doubtless both these papers will be published, it will be better to avoid discussion or comparison till then. A paper by Mr. Charles Twamley on the "Domesday Book for Warwickshire" was read, and we then adjourned to the Castle. How charmed and impressed every one was with the grandeur and beauty of this magnificent structure—how impressed with the beauty of the accessories! Cedars

> "High top bald with dry antiquity."

The castle showing, by its size, the splendour of the trees by which it is surrounded and embraced, and they, by their picturesque beauty, adding a charm to the building. The Rev. C. H. Hartshorne and Mr. Bloxam gave us all the historical evidence they were able to obtain in connexion with its erection. We then entered the castle, where our admiration was not diminished by viewing the treasures it contains. Mr. Scharf undertook to "discourse" on the pictures, and this he did in his usual fluent and agreeable way, unwearied and unwearying. Mr. Bloxam made some remarks in analysis of the "renowned Guy," tending much to explode that cherished legend. After viewing the lower apartments — dungeons of course—of the castle, we rushed, as archæologists can rush, to the carriages, and started for a visit to our president, Lord Leigh, at Stoneleigh Abbey. The present house is an Italian structure, built about a century since on the site of the abbey, of which there are very few remains. Mr. Bloxam produced a manuscript belonging to Lord Leigh, which was written by a monk, giving an account of the brethren, his contemporaries, and stated that it was as interesting and amusing as that of Joslyn, of Bury St. Edmund's: if so, let us hope it may be published. After being hospitably entertained by his lordship, we proceeded to Kenilworth. Mr. Hartshorne and Mr. Bloxam were again in request; but there was nothing to note more than has been written over and over again upon this ruin, which I cannot help thinking acquires more interest from Scott's romance, than from its picturesque beauty. The church, at which there is nothing but a Norman west door worth notice, and the church-plate at the house of the vicar, occupied our attention; "and so home."

On Thursday we went to Coventry, where we were received in St. Mary's Hall by the mayor and the corporation. The costumes of the mayor's sword-bearer, with the cap of maintenance, and the crier with modern habiliments, surmounted by a George III. wig, upon which was a Mediæval red velvet cap, very much like a cardinal's, excited some surprise, if not merriment; but the mirth of an archæologist does not, I hope, detract from his interest in the pursuit, or cause him to value less the efforts of those who entertain him. Here we also had an address of congratulation and welcome, accompanied by what must have produced more gratification to a true antiquary, a display of the muniments and manuscripts belonging to the corporation, a most interesting collection, containing documents from a very early date, royal autographs, guild books illustrating the customs and uses of trade, letters showing the political and social condition of the times when they were written, and also in connexion with the eccentric pageant for which this city has been so long celebrated. There is a bill of 1772, by which is shown that the corporation paid 2*l.* 2*s.* for a wig for my Lady Godiva. We then viewed St. Michael's Church, which is to be the cathedral when the inhabitants get their wish of a bishop being restored to them; Trinity Church, and the remains of the cathedral, which have been lately excavated. We also went to the White Friars, in the ambulatory of which we saw the present monks—the paupers belonging to the Union Workhouse. Ford's Hospital, St. John's Church, and Bond's Hospital, also occupied our attention. On our return to Warwick there was a *conversazione* in the Museum, which was an exceedingly good one, abounding in objects of interest contributed for the most part by those in the neighbourhood.

On Friday we started by special train to Lichfield, rather a long journey, but we were occupied, as Pepys would say, "with brave discourse by the way." On our arrival, we proceeded to the Guild-hall, where Professor Willis gave us a lecture on the Cathedral. In saying it was Willis who spoke it is sufficient to imply that everything was clear, instructive, and convincing. He was followed by Mr. Winston, who read a paper on the glass in the Cathedral, which is of the Renaissance character, and dates from 1534 to 1539. He maintained that the style of this glass, its tone and mode of treatment, should be the standard of all modern glass painting. This paper, like that on the Beauchamp Chapel, had the disadvantage of being delivered where it was not illustrated; but afterwards, in the Cathedral, Mr. Winston was able to add a few words to illustrate more fully his meaning; and if he did not make converts, he certainly modified the opposition that the admirers of more ancient glass were inclined to exhibit. The approach to the Cathedral by the west front is, as all know, remarkably striking. The style on this side is very foreign; the central west door most beautiful. The interior is impressive, and the restoration has been carried out with judgment and effect. Professor Willis then pointed out the features and marks illustrative of the history of its construction, for which he had prepared us by his previous lecture. Mr. Scott also made a short address, explaining the principles upon which he had made the restorations, and confirming the statements of Professor Willis. We returned to Warwick, and at the evening meeting, Dr. Wollaston read a paper on "Mosaics;" and Dr. Collingwood Bruce, "On the Concentric Circles on Rocks in Northumberland."

On Saturday there was a meeting of the historical section, when a paper was read by the Rev.

* Narrated in the "Deutsche Sagen" of Grimm.

* This we give elsewhere.

G. Dodd, on "Boscobel, and the Escape of Charles II." He was followed by the Dean of Chichester, who gave us *the* paper of the meeting, "The Life and Times of John de Stratford, Archbishop of Canterbury and Chancellor to King Edward III." The rev. dean, in eloquent language, gave us a picture of the times in which Stratford lived, and proved him to be one of the greatest patriots in the long list of which England can boast.

At the conclusion of this paper, we took coach for Stratford-on-Avon, visiting *en route* the church of Charlecote, where are the monuments, and in most excellent preservation, of the Lucy family, and we afterwards proceeded to Charlecote, the seat of the Lucys, an Elizabethan mansion, not unlike Cobham in some of its features, but with many modern additions, in a beautiful park most magnificently timbered. As this house is not usually shown to visitors, our reception on this occasion was much appreciated by the members. The objects, however, that most attracted attention were modern; some Florentine mosaics, and above all the grand sideboard, executed by the unfortunate Wilcox, as fine a piece of modern wood carving as can be seen.

We then proceeded to the birthplace of the immortal bard, and here I must confess to some disappointment. There is no old world air about Stratford, and, except for "the house" and "the monument," there would not be the slightest attraction. How the inhabitants trade on these may be guessed from the notice on the church door, that you are requested not to encourage persons in the churchyard who loiter there on pretence of finding the sexton. Mine hostess of a tavern insisted on showing some of us "Shakspeare's smoke-room," and a cupboard from Newplace, in which the poet used to keep his pipe! Shops for the sale of relics, busts, photographs, show how much material benefit he is to his native place. I am afraid the traders on his fame are not confined to the shopkeepers. I profess a great reverence for the poet; but I must say that the tea-gardens sort of style about the whole of the exhibitions was very depressing and disappointing.

In the evening there was another *conversazione* in the museum.

On Monday morning the papers read were, "Notes on the Early Mints of Warwick," by E. Hawkins; "On the Black Book of Warwick," by G. T. Robinson; "On the recent discoveries at St. Alban's," by S. Sharpe; and "On the bust portraits, mask, and monument of Shakspeare," by E. T. Craig.

In the afternoon the members visited Maxstoke Castle, by invitation from Mr. C. Fetherston Dilke, calling by the way at Coleshill Church, which is a large and commanding building of two styles, Decorated and Late Perpendicular. It has a good tower and spire, of lofty dimensions. The chancel is of good proportion, but of a late character; and there are some good effigy monuments near the east end. The font is a very fine specimen of the Florid Norman style, and is in a good state of preservation. At Maxstoke a lunch had been prepared for us, which in munificence far exceeded anything in archæological experience. This having been "greeted" by upwards of a hundred, "not with vain thanks, but in acceptance bounteous,"—for it must be acknowledged that archæology is a wonderful appetizer,—we were conducted by Mr. J. Fetherston, who did the honours in the absence of his brother, through the building. It partakes more of the character of a castellated and embattled mansion than that of a castle, as it is quadrangular in form, with an entrance tower flanked by turrets on one side. On the opposite side of the court are the modern buildings used as a habitation. A portion of these are being rebuilt, to harmonize with the style of the works generally, which were built by Sir William de Clinton, *temp.* Edward III. It has passed into several hands, until it came into the family of Dilke. Nothing remains but the four walls and the gate-house, and there is no evidence of any keep.

Mr. John Fetherston was an excellent cicerone: he read an account of the castle, and his treatment of the subject was such as to make dry narrative and chronology both interesting and amusing.

We then visited the remains of Maxstoke Priory, of which there is enough to show that it must have been very extensive. The enclosing walls remain, as well as a very fine gate-house, of the same date as the castle. And so back to Warwick rejoicing.

There were two sources of great regret to us in the absence of Lord Talbot de Malahide and Mr. Albert Way, that of the former caused by domestic affliction, and the latter by ill health. The kind feeling which both have always shown to the members could not fail to increase the sympathy which the causes of their absence evoked.

On Tuesday the usual meeting for the transaction of business was held; and so terminated one of the most pleasant meetings the Institute has ever had. The impartial and honest chronicler will have to say that it will be remembered more for the excursions than for the papers read, but most of all for the cordiality with which we were received, "and so, farewell to Warwick."

F.S.A.

CURIOUS SEPULCHRAL MONUMENTS IN WARWICKSHIRE, OF THE THIRTEENTH AND FOURTEENTH CENTURIES.

This is the memoir read by Mr. Bloxam, as we have elsewhere mentioned:—The most ancient of the sepulchral monuments in this county is undoubtedly that huge and unlettered monolith at Long Compton, called the King Stone, standing near the circle called the Rollright Stones, which, together with a cromlech in its vicinity, stand in the neighbouring county of Oxford. This is the maenhir of the earliest type of sepulchral monuments of the ancient British period, and in accordance with that memorial noticed in Holy Writ as placed over the grave of Rachel. We have no Roman, no inscribed British-Roman, and no Anglo-Saxon monument at present visible in this county. The earliest monumental records we have in our churches are of the early part of the thirteenth century. Of this period is the sculptured and recumbent, though much mutilated, effigy of a knight, formerly in the Abbey Church, Merivale, and now preserved in the chapel of the gatehouse to that monastery. This is an effigy of much interest: it now consists, however, of little more than the torso or trunk, the head and lower portions of the legs having been destroyed. The armour consists of the hawberk or tunic of mail, with chauses or close-fitting pantaloons of the same: the hands are protected by mufflers, the fingers not being divided: the right arm and hand are lying on the breast: the left hand appears beneath the shield hanging down on the left side. Over the hawberk is worn the long sleeveless surcoat of linen, belted round the waist with a narrow strap and buckle. Another strap or guige, somewhat broader than the former, to which the shield is attached, crosses diagonally over the right shoulder to the left side. The shield on the left side is unusually long—not less than 3 ft. 9 in. in length—extending from the shoulder to the knee: it is not flat on the face, but curved, or convex without and concave within. In outline it is heater-shaped. The position of the sword is somewhat singular, being on the right side, and fastened to a belt crossing the body diagonally from the right hip to just below the left hip. This effigy bears a resemblance to two of, apparently, the most ancient of the sepulchral effigies in the Temple Church, London, which likewise exhibit the long shield, as in this, and much the same arrangement of the drapery of the surcoat.

I think this effigy is commemorative of the fourth William, Earl of Ferrers, born about the year 1193, and who died A.D. 1254, and was buried in the Abbey Church at Merevale. This effigy, considered by itself, I should take to have been executed some thirty years earlier than the time of his death, but there is no one else to whom I can assign it.

In the little village church of Avon Dassett, in this county, a few miles east of Kineton, is the recumbent effigy, perhaps unique of its kind, of a former incumbent of that church, who appears to have died before he had attained Priest's Orders, he being represented in the full vestments of a Deacon. In the twelfth and thirteenth centuries, and also in the early part of the fourteenth, it was by no means unusual for ecclesiastics of the inferior grades, such as deacons, sub-deacons, and even acolytes to become incumbents. We may find innumerable instances of this in almost any county history, in the lists of the incumbents of the several parishes, and their different grades in and towards the priesthood. This was felt to be an abuse, and in the second general council of Lyons, held A.D. 1274, the thirteenth constitution obliges the curates, or incumbents, to residence and to take priest's orders in the first year of their promotion. In the Council of Buda, held A.D. 1274, the 20th canon imports, that all those who have benefices with the cure of souls shall be ordained priests.

The slab out of which this effigy is sculptured is of dark-coloured forest marble, the effigy being represented lying beneath a horizontal canopy composed of a semicircular arch with the representations of buildings above, and this is supported by shafts with plain bell-shaped caps, running down the sides of the tomb.

The effigy, which is sculptured in relief, represents the person commemorated in the full vestments of a deacon. He wears the ancient cassock or ordinary habit, over which appears the alb, and over that the Dalmatic: on the right side underneath the Dalmatic and over the alb are the two extremities of the stole. The sleeves of the cassock and alb are close fitting: those of the Dalmatic are wide. About the neck appears the amice, and the crown of the head is tonsured. The right hand, held downwards, is grasping a scroll, one of the few instances in which sepulchral effigies are thus represented. The left hand is upheld on the breast and hanging down from the wrist appears the maniple.

But this effigy does not constitute the whole of this monument, for it lies under a sepulchral arch within the north wall of the chancel, of later date by a century than the effigy, being of the fourteenth century. This arch is ogee-shaped, but not crocketted: it is, however, cinque-foiled within, and is ornamented with the ball flower in a hollow moulding. It appears to me that in the fourteenth century, when the chancel was rebuilt, this sepulchral arch was constructed to contain the effigy of a former age.

I can find mention of one incumbent only of this parish of the thirteenth century.

"Hugo Rector eccles de Avene
Derced mense Maie 1232."

I only know of one other sepulchral effigy of a deacon in this country. That is a mutilated recumbent effigy in relief lying amongst the ruins of Furness Abbey, Lancashire. This is somewhat rudely, at least formally, sculptured in relief from a block of lias or limestone, and from the hardness of the material the artist has altogether failed to give anything like effect or breadth to the drapery. The head has been broken off: the body of the effigy is represented vested in an alb with close-fitting sleeves: the alb is represented in parallel puckered folds. In front of the alb, near the skirt in front of the feet, appears the parura or apparel. The cuffs of the sleeves are also covered with parures or apparels; but these are quite plain. The alb is girt above the loins by the girdle, *cingulum, seu zona, seu balthæus*, the tasselled extremities of which hang down to the apparel at the skirt of the alb. This is the only instance I have met with in the sepulchral effigy of an ecclesiastic in which this vestment, the girdle, is apparent. From the wrist of the left arm hangs, in somewhat an oblique position, the maniple; and crossing diagonally from the left shoulder to the right hip, and thence falling straight down by the right side, with both extremities hanging down, is worn the stole. In front of the body a book is held with both hands. The slab out of which this effigy has been sculptured is coffin-shaped, wider at the upper part than at the lower, and I should infer is of the fourteenth century.

This effigy at Furness Abbey is illustrative of that at Avon Dassett, for the mode of wearing the stole over the left shoulder, with the extremities hanging down on the right side, was peculiar to the office of deacon, and is alluded to by Durandus, who, in treating of this office, tells us that the stole was placed upon the left shoulder, *supra sinistrum humerum stola imponitur*. The book represented is evidently that of the Gospels, for the same writer tells us that when the deacon was ordained there was delivered to him a stole, and the Book of the Gospels. *Diaconus cum ordinatur traditur sub certis verbis stola et codex Evangelii*. In a Manuscript Pontifical in my possession of the latter part of the fifteenth or early part of the sixteenth century, but which does not, probably, materially differ from the Pontificals of an earlier age, the bishop at the ordination of a deacon is represented as putting the stole over the left shoulder of the deacon and adjusting it under his right arm. *Hic Episcopus sedens cum mitrâ ponit stolam supra humerum sinistrum, reducens eam sub alam dextram*, &c. He, the bishop, is also represented as delivering

to the deacon the Book of the Gospels. *Hic tradit episcopus librum Evangeliorum.*

In these two effigies the Dalmatic is represented as worn on the one but not on the other; and this singularity may thus be accounted for: although the Dalmatic was worn over the alb by deacons, and the tunic was worn over the alb by sub-deacons, there were certain occasions on which neither the Dalmatic nor the tunic were thus worn. For, as Durandus writes, *non ergo diaconus dalmaticam nec subdiaconus tunicellam in diebus jejuniorum in officio missæ portant.* The maniple worn over the left arm was a vestment common to the various orders of the Church, from the sub-deacon upwards; for at the ordination of the sub-deacon, the bishop placed the maniple on his left arm, as appears by the Pontifical. *Hic episcopus sedens mittit manipulum in brachium sinistrum.*

The mode of wearing the stole by the deacon differed essentially from the mode in which it was worn by the priest, for in the case of the latter, the stole came over both shoulders and crossed the breast diagonally, or saltire-wise, in front, down to the girdle, from whence the two extremities, which were fringed, hung pendant, one on each side. This mode of wearing the stole is seldom visibly apparent on the effigies of priests, as the chasuble covers the alb, and the fringed ends of the stole only appear beneath the chasuble. In some few instances, however, as on a brass in Sudborough Church, Northamptonshire, the effigies of priests are represented without the chasuble, in the alb only, with the stole over, crossed in front, as if vested for the Sacrament of Baptism, or some other sacred office in which the chasuble was not required to be worn. This difference in the wearing of the stole between the priest and deacon is thus alluded to by Durandus:—*Orarium itaque jugum scilicet onus est jugum sacerdotibus, onus diaconibus. Unde fit est et sacerdotibus circa collum et diaconibus supra sinistrum humerum ponatur. Sicut enim jugum collo portatur sic et humeris onera feruntur.*

Of recumbent sepulchral effigies of priests I may briefly notice those at Hillmorton, Stoneleigh, and Kineton. These are represented in the vestments worn at the celebration of the Eucharistic Sacrifice in the amice, alb, stole, maniple, and chasuble. There is no peculiarity in any of these effigies: they are all of the usual type. In Newton Regis Church there is, however, a very curious monument of this era, consisting of a low tomb or slab rudely sculptured in low relief under a sepulchral arch in the north wall of the chancel. It represents in a trefoliated compartment the busto of a priest, with the missal or breviary on one side and a chalice on the other: above are angels waving thuribles, with the conventional representation of angels conveying a soul to Heaven in the likeness of a nude figure in a sheet. Two acolytes bearing tapers appear beneath the busto, whilst at the foot of the slab is sculptured the *Agnus Dei*, or symbolical representation of our blessed Lord under the type of a lamb, and at the head of the slab the *Spiritus Sanctus*, or Holy Ghost in the form of a dove. The execution of this monument is remarkably rude for the age in which it was executed.

In Polesworth Church, formerly conventual, is the very curious, and perhaps unique sculptured recumbent effigy of a prioress of that establishment,—a Benedictine nunnery. It is, I think, of the fourteenth century. Her head appears in a trefoil-shaped sinking. Round the head, chin, and neck is the coif and wimple, and over the head is worn the veil. She is habited in a large gown or cowl with wide hanging sleeves but without any mantle. In her right hand she held the pastoral staff, floriated within the crook, which is turned inwards, and in her left hand is held the *Horæ* or book of prayers, whilst beneath her feet is the figure of a hart or stag, perhaps in allusion to the verse in the psalms, "As the hart desireth the water brooks."

This is the only sculptured recumbent effigy of an abbess I have met with in this country. There are some few inlaid brass effigies, such as that at Elstow, in Bedfordshire, and some few statuettes, as those round the tomb of Lady Montacute, in Oxford Cathedral.

There is in the Church of Orton-on-the-Hill, Leicestershire, anciently a chapel belonging to the Abbey of Merivale, in this county, the recumbent effigy of a Cistercian monk, one of the abbots, I am inclined to think, of Merivale, and probably removed from the abbey church of Merivale to Orton on the suppression and destruction of the abbey church. It represents him in the *Cappa clausa*, or close cowl, with the mozetta and hood attached to it thrown back over the shoulders, whilst on the head is worn the coif or close-fitting scull-cap called the birretum. Over the head is an ogee canopy, which refers the date to the fourteenth century. This effigy is, as far as my knowledge extends, perfectly unique.

There is one more monument and effigy of the fourteenth century I consider greatly interesting. This is a rich high tomb, placed beneath a very rich canopied arch, at Cherrington Church, in the south of Warwickshire. The canopy or arch over that tomb takes in form that of a low and obtusely-pointed ogee arch, the interior mouldings of which are crocketted, whilst the under part or soffit is cinque-foiled. Hollow mouldings in the architrave contain a series of the ball and four-leaved flower, rich accessories in architectural details of the fourteenth century. The sides of the tomb are divided into a series of rich canopied recesses, ogee headed and crocketted, and trefoiled within the heads. On the north side of this tomb, which stands between the nave and eastern part of the north aisle, is a drain or piscina, into which the priest poured the water with which he washed his hands during the celebration of mass. This piscina, forming part of the monument itself, is a very curious arrangement, and I do not remember to have met with it elsewhere: it is, however, indicative of the fact that the east end of the north aisle had been converted into a chantry chapel.

The recumbent effigy on this tomb is very curious, and exhibits a singular specimen of the civil costume or ordinary dress of a gentleman, frankelein, or squire of a parish in the fourteenth century.

The dress is that which in ancient wills of this period is described as consisting of "*Tunica et Supertunica cum caputio*," that is, a long coat or tunic with close-fitting sleeves buttoned from the elbows to the wrists, the *manicæ botonatæ*: over this tunic is worn a supertunic or surcoat with loose sleeves hanging down. The supertunic is girt by a narrow belt buckled in front, and from this belt is suspended on the right side an anclace or knife. On the head, and covering the shoulders and breast, is a kind of tippet combined with a hood very like the modern cape, and called the caputium. The terms "cote and hood," two of the articles of apparel, are mentioned in Piers Plowmaa Crede, written in the fourteenth century, and also in the poems of Chaucer. On each side of the head of this effigy is an angel, and the feet rest against a lion.

Although this effigy is far from unique, there being many sculptured effigies of this class of the fourteenth century, which have not however been yet satisfactorily treated of or described, the whole of this monument is exceedingly rich and curious, and one of the most remarkable in the county of Warwick.

There are other monumental effigies of great interest and variety, of later date than the fourteenth century, to be met with in the county of Warwick, but these I do not now propose to dwell on, having limited my subject to a period not later than the fourteenth century.

FORMATIVE ETHICS, OR THE MORAL SCIENCE OF RECTIFYING ABERRATION, AND OF DEVELOPING THE PERFECT AND BEAUTIFUL.

After what has been just stated, therefore, it is not surprising to find that it is the character of all the higher laws of nature to assume exact numerical statement. All our knowledge of nature is derived through the subjective conditions of the five senses; and, as the fundamental form of sensation is quantity in power, space, and time, all science must be reducible to quantitative statement, and our knowledge of the ideally right, moral, beautiful, and perfect, should assume this form, or it can never lay claim to the title of "exact."

Aristotle's ethics are applications of the golden rule of the quantitative analysis of phenomena to morals, but only to ethics in their commonly accepted limited meaning, not as embracing in the wider sense herein attached to them the whole science of moral governance and formation; for, not only is human nature to be subjected to rectitude of thought, action and form educed to both spiritual and physical health and beauty, but the whole of terrestial nature committed to man's rule is to be compelled to its best issues, *i.e.*, its moral condition and form by the sovereign power of his right-mindedness. "The new man" restored in "righteousness and true holiness" is to be the re-creating spirit of the earth.

Ethics are to become the all comprehensive and exact records of those quantitative relations in which all things should consist, in their best or harmonious relations within themselves and to each other of that proportioned and measured at-one-ment or harmony of nature, of which every man's thoughts, and acts, are in a greater or less degree either constructive or destructive. This is the scope of Formative Ethics; it is also, let it be repeated, the scope of the sacred science which permeates the Scriptures. For, if we steadily and carefully contemplate the Christian mission, we shall find that its object is twofold. First, the spiritual regeneration of man,—the renewal of the mind or rectification of ideas; and, secondly, by means of the moral activity thereby produced, the rectification of organization and form.

This essay attempted, at its outset, to draw a closer attention to this secondary purpose of Christianity; and having emphatically pointed it out as the Formative Mission of man, now amplifies its expression according to the quantitative hypotheses to that of the Rectification of Nature according to Number and Measure. This amplification also is in accordance with Holy Writ.

Are not the references to measure in the sacred writings from the Mosaic records to the Revelations significant? Consider the lawgiver receiving the pattern "measure" or "number" whereby the typical tabernacle was to be constructed,—the vision of the prophets wherein they foresaw "a man with a measuring reed in his hand,"—the Christ who was exactly to define man's duty to his Creator and his neighbours, who was to reveal to whom understanding should be vouchsafed,—the ultimate harmony of the universe, the destined re-edification of the shattered temple of sensuous nature by the Holy Spirit of Truth.

The world has never profited by vagueness of expression: every great benefactor of the human race, like the master, has carried a rule in his hand, and has subdued his specific study to number and measure. Till exact, master minds grapple with a subject all is cloudy and empirical, the world is swayed hither and thither by guess-work and opinion. The master comes with the measuring compass of a precise intellect: he may be assailed, persecuted, but where darkness reigned there will be light.

The Pythagorean music of the spheres was but a glimmer of the fundamentally quantitative relations of phenomena, of that universal harmony, of that measured conformity of the material to the spiritual which is to come. "I am their music," saith Christ by the prophet, "the Christ who is the spiritual sun and centre of moral being, who hath given the measures to which nature is to be conformed, who hath measured the waters in the hollow of his hand, and meted out heaven with a span, and comprehended the dust of the earth in a measure, and weighed the mountains in scales, and the hills in a balance, and hath laid the foundations of the earth and the measures thereof, and hath stretched the line upon it, and hath declared that judgment shall stay to the line and righteousness to the plummet, that divers weights and divers measures are an abomination, but that a perfect and just measure is His delight; that He will not make a full end of the aberrant world, but will correct it in measure, in measure will he debate with it, and the measuring line shall go forth upon it, and it shall be holy in its re-edification by the Spirit of Truth, nor plucked up, nor thrown down any more for ever."

These connected passages from Scripture abundantly prove the quantitative nature of the restoration of the world to be effected by Christianity: the golden rod or reed in the hand of the effulgent humanity of prophetic prevision symbolises the obedience and conformity to a measured standard required of the Christian, those limits of temperance and moderation within which all the aberrations of nature will be ultimately restricted; and what do those words moderation and temperance imply but quantitative relation, a mid path or mid measure between the extremes of the too little and too much?

In the dismembered confusion of ideas, of which the sum of popular knowledge is generally composed, the sciences appear to be isolated and without bond or union, but a quantitative philosophy brings all ideas and things together in one comprehensive grasp, and shows that

* See p. 561, *ante*.

all their differences are radically reducible to quantitative expression.

Every species of phenomena has its gamut of variation, between the limits of which lies its normal or mean condition, to which were we without other testimony the law of probability would give the preference. Man can only understand the limited. The powers of organic and inorganic being are fixed within limits, the bounds of which it is destruction to pass. There is a point beyond which there is no strength gained by adding thickness to iron, or wisdom by cramming the memory with facts. Stellar, climatic, political, ethical, and æsthetical phenomena oscillate within narrower or wider bounds, between which lies that tenor of moderation most desirable; and it is found that these aberrations, oscillations, or fluctuations of phenomena are inversely less and insignificant as we pass from the immediate sphere of human influence to the distant planetary spaces, where the periodical fluctuations of phenomena oscillate to and fro about a *mean value*, from which they never depart to any ruinous extent, but only within very moderate and reasonable limits,—but of this more anon.

We shall now rigorously enter upon the quantitative analysis of phenomena, of sensation, which presents three fundamental kinds of quantity. Force, Space, and Time at the basis of our ideas of any sensation, neither of which can possibly be conceived absent from it: abstract every phenomenon from sensation but these ideas and a sensation is still conceptible: withdraw either of them and it is not. At the basis of every visual sensation will be found the ideas of force, space, and time. 1. Force—in the strength or weakness of the light. 2. Space in the superficies and shapes of impressions. 3. Time—in the duration of the impressions. At the basis of every sensation of hearing: 1. Force—in the strength or feebleness of sounds. 2. Space—in the volume of sounds and notes. 3. Time—in the duration of sounds and notes. At the basis of every olfactory sensation: 1. Force—in strong or weak odours. 2. Space—in the extent of the sensorium impressed. 3. Time—in the duration of the sensation. At the basis of every sensation of taste: 1. Force—in strong or weak flavours. 2. Space—in the extent of the sensorium impressed. 3. Time — in the duration of the impression. At the basis of every sensation of touch: 1. Force—in the strength or feebleness of the impression. 2. Space—in the extent of the body impressed. 3. Time—in the duration of the impression. Without this categorical elaboration, perhaps, the fact of force, space, and time, being the fundamental form of sensation might be made more apparent by putting the following question:—Can any one conceive of a sensation independently of the ideas of the sensorium being moved (force), in a definite space during a certain time? These three fundamental ideas of sensation, of phenomena, are on the physical hypothesis of causation the three fundamental conditions of nomena, or on the dual hypothesis, of spirit and substance. Now, these three fundamental ideas of phenomena are quantifiable.

Quantification,* therefore, is a possibility to which all our ideas, and it is also supposed the nature external to us, may be subjected. The theory of the rectification of nature then, to be scientifically exact, resolves itself into the determination of rectitude in the forces, the spaces or forms, and the duration or times of phenomena, and the means of producing it. Here, then, is the fitting place to introduce the postulates of the science of quantitative ethics.

Postulates of Quantitative Ethics.

1. All phenomena are quantifiable. The idea of quantity lies at the basis of all our mental conceptions. It is on this account that the mathematics are of all the sciences the most rigorous and certain in their reasonings and conclusions, for all their premises and deductions exist in or are made from the nature and constitution of the mind itself.

2. Numbers are the symbols of quantities: every quantity may be numerically expressed.

3. The conditions of phenomena can only be definitely expressed by reference to number and measure.

4. All phenomena are either as they ought or ought not to be, and therefore exist in either right or wrong quantity or quantities. Perfection and imperfection, therefore, may be numerically expressed.

5. The Rectification of Nature can only be confidently proceeded with on the knowledge of the right quantitative condition or proportional relations of every species of phenomena. The Quantitative Rectification of Nature, therefore, definitely expresses man's Formative Mission.

6. As the three necessary quantitative concomitants of all phenomena are force, space, and duration; in which three kinds of quantity, from the planets to the minutest function of human, animal, and vegetable life, all things fluctuate. Quantitative Ethics have to determine which of all the possible fluctuations of every species of phenomena in these three kinds of quantity is the condition of rectitude.

7. As every variable species of phenomena fluctuates or aberrates within certain limits, the sum of the quantities of all its possible instances divided by the number of those possible instances gives a mean or average which is the numerical expression of the idea of phenomenal rectitude. For of all the possible instances, it might be argued, *a priori*, one-half of them would, in all probability, err in excess; the other in defect, either on the side of the *too little* or *too much*. This *mean* then is the quantitative expression of the ideally right—the moral, and of the sensuously good, beautiful, and perfect.

8. As all ideas and things must exist in definite quantities, he who denies the mean to be the quantitative expression of absolute rectitude, and of the measure of sensuous beauty and perfection, has to prove that they inhere in some other quantity, which must be of either excess or defect, which is absurd.

9. To realize this mean or average condition in every instance of every species of phenomena, would be to establish equality amongst all the instances of a species. Now, equality and greatest difference are the extremes or limits of ratio, between which all other ratios lie; and experience teaches us that either of these extremes of equality or of greatest possible difference existing between all the instances of any species of phenomena would be repugnant to human ideas as at present constituted. Although, therefore, the mean is the perfect mid-point of absolute rectitude; yet to realize this state in all the instances of every species of phenomena would be to produce an equality in nature which would be as objectionable to human ideas as the greatest possible difference between all the instances of every species of phenomena. If, therefore, variation or aberration be necessary,* to what extent may it be permitted from the perfect mean or mid-point of perfection? Applying a similar law to variation, the reply is that mean variation may be permitted, that is to say, variation within the *via media* of moderation.

10. The great compensating remedial or curative law for excess and defect in nature is the following:—That every aberration of any system in excess of its *mean state* must be compensated for at some time or other, by an equal and opposite one in defect, or the balance of that system will be impaired, or its very existence threatened. This holds good equally in human, animal, and vegetable organisms, as in the larger phenomena of the planetary system.

11. The variation or fluctuation of ratios between equality and greatest difference, between 1 : 1 and 1 : 0, forms a calculus whereby the mean of rectitude and the harmonic relations of quantity may be demonstrated.

12. The summary of the science of quantitative ethics, then, is that the Mean sometimes called the Golden and Immutable† is the quantitative expression for the moral ideal‡ and moral form of phenomena of the ideally and sensuously good, beautiful, and perfect, of those types which are the *beau ideals* of the arts; and that the great Remedial, Curative, or Restorative law of nature, the Law of Compensation, points out the method by which this *mean state* or *moral form* is to be re-established throughout the solar system.

The development of the hypothesis from its general conception to the precise and definite idea given by the introduction of the *exact* or scientific element may be traced in the various titles it has assumed in the progress of this essay:—

"Formative Ethics," "The Rectification of Nature by Mind," "The Rectification of Nature by Right Ideas and Action," "The Rectification of Nature by Moral Ideas and Action,"—which became on the introduction of the exact scientific element; "Quantitative Ethics," "The Quantitative Rectification of Nature by Mind," "The Quantitative Rectification of Nature by Right Ideas and Action," "The Quantitative Rectification of Nature by Moral Ideas and Action."—the end being to supply a criterion of judgment, to beget exactitude of mind, to develop the sensuously good, beautiful, and perfect in nature and art, and to restrict the fluctuations of all phenomena within the bounds of moderation.

We have now to seek confirmation of the leading principles of the quantitative hypothesis by interrogating nature. Let us inquire, then, if there be any facts in astronomical science, in the simplest and grandest phenomena of nature, in the laws of the planetary forces, spaces, and times, which point to the mean as the right quantitative expression of rectitude; for if there be, there is proof positive of its truth, and that it is of divine institution,—a law, an idea beyond human invention or caprice. The following quotations from the highest authorities place it beyond the sphere of doubt and debate:

Experience interrogated in reference to the Mean, being the quantitative expression of Rectitude, and the Measure of the Moral Form of Nature.

It lies in the path of development which science pursues, that that which long stood isolated becomes connected by degrees, and subjected to higher laws. The scientific man advances full of expectation that "Nature," as Plato tells us Socrates once observed, "shall have interpretations according to reason;" and as he traces the connexion of all phenomena, and observes their subjection to the same simple laws, becomes deeply impressed with a belief that both the spiritual and material forces subject to periodic perturbations, move in fixed and eternal cycles. Such a conception of the two spheres of being, the spiritual and material, leads to clearness and simplicity of view, and the discovery of laws which are the ultimate term of human inquiry.

The crude heap of physical dogmas which one age heaps on another is not merely injurious, because it cherishes individual errors, because it obstinately presents indifferently-observed facts for acceptance: it does more than this, it opposes everything like grand or comprehensive views of the fabric of the universe. Instead of investigating the *mean* or mid-point about which, despite the unfettered aspect of nature, all phenomena oscillate within fixed limits, it only takes cognizance of aberration. In all that is mobile, changeable in space, *Mean Numerical Values* are the ultimate object: they are, indeed, the quantitative expression of laws, and show us the immutable amidst the perturbations and fluctuations of phenomena. The quantitative or exact method pursued by modern science is pre-eminently distinguished by the attainment and correction of *Mean Values*.

This useful and valuable property of *The Average* of a great many observations, that it brings us nearer the truth than any single observation can be relied on as doing, renders it the most constant resource in all inquiries where accuracy is desired. And it is surprising what a rapid effect in equalising fluctuations and destroying deviations, a moderate multiplication of observations has. Geometers have demonstrated that in the midst of all the fluctuation which can possibly take place in the elements of the orbits of the planets by reason of their mutual attraction, the general balance of the parts of the system will always be preserved, and *every departure from a Mean State periodically compensated*.

It has been demonstrated, that all the changes which the mutual actions of the planets on each other can produce in the course of indefinite ages, are periodical, that is to say, increasing to a certain extent, and that never a very great one, and then again decreasing; so that the system can never be destroyed or subverted by the mutual action of its parts, but keeps constantly oscillating as it were round a certain *Mean State* from which it can never deviate to any ruinous extent. The researches of Laplace and Lagrange in particular have demonstrated *the absolute immutability of the Mean Distance* of

a

* This may help to explain an expression attributed to Pythagoras, viz., "that things are the copies of numbers," which meant, perhaps, that all things might be quantitatively expressed, and symbolised by numbers.

* Observation of the larger phenomena of nature favours the belief that thus even small aberrations are diminishing.

† One of the books of Confucius is said to be entitled "The Immutable Mean."

‡ The moral ideal here referred to is, of course, that of human nature.

each planet from the sun and consequently of its periodic time. Observation shows *the Mean Eccentricity* of the moon's orbit to be the same now as in the earliest ages of Astronomy.

The time occupied by one complete rotation of the earth on its axis, or the *Mean Sidereal Day*, may be shewn on dynamical principles to be subject to no variation from any external cause; and although its duration would be shortened by the contraction in the dimensions of the globe itself, such as might arise from the gradual escape of its internal heat, and consequent refrigeration and shrinking of the whole mass, yet theory, on the one hand, has rendered it almost certain that this cause cannot have effected any perceptible amount of change during the history of the human race; and on the other, the comparison of ancient and modern observation affords every corroboration to this conclusion. From such comparisons Laplace has concluded that the sidereal day has not changed by so much as one hundredth of a second since the time of Hipparchus. The *Mean* sidereal day therefore possesses in perfection the essential quality of a standard unit, that of *complete invariability*. The same is true of the Mean Sidereal Year, if estimated upon an average sufficiently large to compensate the minute fluctuations arising from the periodical variations of the major axis of the earth's orbit due to planetary perturbations.

[The lecture is here amplified with numerous instances of the law of compensation by which the slight perturbations, fluctuations, aberrations, and eccentricities of planetary phenomena are periodically rectified, the balance of the various parts of the System Restored, and its Immutable Mean State preserved.]

The legacy of research, which Newton may be said to have left to his successors, was truly immense; yet Newton himself never entertained a conception of a demonstration of the stability and permanence of *the mean state* of the system, under all the accumulating influence of its internal perturbations: this labour and this triumph were reserved for the succeeding age, and have been shared in succession by Clairant, D'Alembert, Euler, La Grange, and Laplace.

In particular, the researches of Laplace, Lagrange, and Poisson have shown the ultimate invariability of the *Mean Distance* of each planet from the sun, and consequently of its periodic time.

Relying on these grand discoveries we are enabled to look forward from the point of time we now occupy many thousands of years into futurity, and predict the state of our system without fear of material error but such as may arise from causes whose existence at present we have no reason to suppose, or from interference we have no reason to anticipate.

In the foregoing conclusions of consummate geometricians in respect to the law of compensation and of the permanence of the *Mean State* of the solar system, the leading principles of Formative Ethics have been, as we anticipated, fully corroborated. The great Law of Compensation enunciated in postulate 10, and that of the *Mean* as the quantitative expression of phenomenal rectitude, postulate 8, have received ample confirmation.

We have learned that all the aberrations of the solar system in excess of its *Mean Conditions*, though they be but slight, must be compensated for at some time or other by equal and opposite ones in defect. This *Immutable Mean*, then, is the quantitative expression of the Moral Form, or in other words, of the perfect or ideal state of the solar system. These astronomical evidences of the truth of the theory of Formative Ethics have the greater weight, inasmuch as they were unknown to the writer when he framed it: he felt, however, that if his theory were correct, it would be confirmed by an examination of the scientific records of the larger phenomena of nature.

The universality of the leading principles of Formative Ethics has now to be traced by descending from the planetary spaces, to atmospheric, terrestrial, and human phenomena till the first purpose of this investigation be accomplished, and the fundamental principles of the fine arts of æsthetic proportion be left demonstrated and established in the last sections of Formative Ethics. W. Cave Thomas.

Newspaper Press Fund.—The general meeting was held on the 30th ult., Lord Houghton presiding, when a very satisfactory report was presented. The accounts showed a balance in hand of 1,346*l*.

NOTES OF A PROFESSIONAL TOUR IN THE COLONIES.

In the year 1858 I left Southampton for an extended residence in Central America and the West Indies, and I proceeded on my voyage in the ship *Atrato*, an iron vessel belonging to the extensive fleet of the Royal Mail Steam Packet Company, commanded by Capt. Woolley.

We had about 150 passengers on board, of almost all races: a motley collection of English, American, Spanish, French, Italian, Mexicans, coloured Creoles of the West Indies, *et hoc genus omne*. We passed the Azores on the sixth day, but it was too hazy to see them, and the weather was then getting very warm.

In this course across the mid-Atlantic the eye is seldom relieved by the sight of a "sail;" nothing but the heaving and swelling of the dark blue waves, and the fleeting and changeable character of the overhanging clouds; in fact, for a day or two after you leave Southampton until a day or two before you arrive at St. Thomas's, seldom are any vessels to be seen; and when seen on the horizon they look like mere spots or specs on the sun's disc.

On the tenth evening after embarkation I saw one of those gorgeous and brilliant sights, the setting sun at sea. The clouds just above the horizon presented such a splendid effect of various colours, warm and glowing tints, crimson and gold, and hues of all creation, that no language can adequately describe, and which would puzzle even the magic pencil of a Claude to accurately portray. As the poet says:—

> "Who can paint like nature?
> Can imagination boast amid the gay creation hues like these;
> Can it mix them with such matchless skill
> And blend them one in the other
> As it appears in every bud that blows?"

I had also a very splendid view of the comet, the tail showing itself very distinctly, from the clearness of the atmosphere, and the canopy of heaven was studded thickly over with innumerable stars of remarkable brilliancy. The rising of the moon is also an interesting phenomenon at sea: gradually and slowly emerging from the horizon she sheds her pale reflected light on the ever-varying waters of the deep, throwing them alternately into light and shade: and many amuse themselves by leaning over the bows of the vessel, as she ploughs her undeviating trackless course through the watery element, to see innumerable rays of phosphoric light thrown out by the medusa (or jelly) and other fish at the approach of danger and to light them to escape being run down: these vie with the heavens in vivid brilliancy. The seas in the tropics swarm with piscatorial life.

On the 13th we were all alarmed and thunderstruck by the sound of the fire-bell. This was to call up all hands to go through the fire-extinguishing exercise. It was all so quietly arranged that but few knew it, except the officers and crew; and judge the consternation it created: but the alarm was soon appeased when information of the cause was given.

On the 14th day we passed the group of Virgin Islands to the north of our course; we then slowed speed, and anchored for the night off St. Thomas's. At six a.m. steam was up, and we entered the harbour of St. Thomas, an island belonging to the Danish crown. It is situate on the south side of the island, and has rather a narrow channel for the entrance. It is perfectly land-locked, east, west, and north, and the entrance is fortified on each side with small batteries. There is a fortification, also, in the town, opposite the entrance, and a lighthouse on the point. The principal town, Charlotte Amalie, is situate on the side of the mountain facing you as you enter the harbour. It is built in the shape of three flat cones, their bases joining and commencing at the edges of the water in the harbour; and, tapering gradually up to their apexes, the houses appear from the harbour to be built one above another.

The principal buildings are the governor's house, in the Grecian style of architecture; the fort, Blue Beard's Castle (an ancient structure); the hospital, &c.; and many good private houses.

The absence of chimneys to the houses appears striking, and they have the advantage of a beautiful clear atmosphere, not dimmed with smoke, as with us at home. The windows and jalousies occupy nearly the whole fronts. The roofs are many of them covered with galvanized iron, or gaily painted shingle: these with the verandahs and balconies painted in bright colours, and the cream-coloured tint of the stones with a bright sun shining upon them, produce a dazzling and brilliant effect. The streets are rather narrow and not very well cleansed. There are some good stores and hotels in the place, also places of worship and residences.

The geological stratum of the island is a whitish limestone, of which the principal houses are built. The land at the back of the town rises to a considerable height, and is covered with stunted trees and bush.

The island, which is seventeen miles long and five broad, population about 13,000, is not very productive, yielding only a little sugar, rum, cotton, and coffee. In consequence of nearly all the timber being cut down, it is very much subject to drought; this occasions a scarcity of water, which interferes very seriously with the successful cultivation of the island; and the inhabitants have to depend principally on the trade produced by its being the central station for the royal mail steamers. The company have extensive works erected there—a patent slip, &c., for repairing their vessels. The inhabitants supplied us with fine alligator pears, pines, oranges, bananas, cocoanuts, &c., and also cigar-cases and cigars, fans, bracelets, and other fancy articles for ladies.

Before the last mail contract was entered into between the Government and the company, it was suggested to remove the station to Antigua, it being an English colony, an island with harbours every way adapted for an extensive trade; but the gaieties and allurements of St. Thomas's, "this gem of the tropics," it is said, prevailed over every other consideration, so that the intention was abandoned.

About two years ago I suggested in your pages the desirability of connecting this island with the West Indian Islands and the main land at Demerara by means of the submarine telegraph, so that the important colonies south of it could have better communication with England and each other. This, I am glad to see, is likely to be carried out, a company having been established for the purpose, which will have a very beneficial effect on trade and commerce. The harbour of St. Thomas is very unhealthy: the crews of the mail steamers suffer fearfully from yellow and other fevers; some vessels lose from thirty to thirty-six men when lying there only fourteen days waiting for the return mail. This heavy mortality might be considerably reduced or mitigated by strict sanitary arrangements, and by perfect temperance on the part of the crews. The *Atrato* is a splendid sea-boat for a smooth sea, but rather too narrow for heavy seas, or wind on the beam, when she rolls most unpleasantly. Our speed was very good; we made 11 knots at starting, and increased it to 14 knots and 14½ knots before we arrived at St. Thomas's—a very expeditious and satisfactory mode of transit. We arrived on the 1st of October, and on the morning of the 2nd we transhipped our luggage, &c., on board the *Derwent*, one of the old school of steamers that are employed in the intercolonial trade; and on leaving the harbour the signal-gun was fired, which echoed and reverberated from mountain to mountain, and, with three hearty cheers from our fellow voyagers on board the *Atrato*, bidding us God speed, and a merry tune from the bands, we steamed out of the harbour.

St. Thomas was soon lost to the view, and we passed Cat Island and the Island of Vieque, and made Porto Rico, a Spanish island. It appears to be mountainous in the interior, and to be well cultivated. Plantations and sugar-works are numerous, and the cocoa-nut trees fringe the margin of the island. The western part appears flat, and the best cultivated.

Our course lay to the north of Porto Rico, and we entered the harbour of St. Juan about sixteen hours after leaving St. Thomas's. It is a beautiful and capacious harbour, land-locked, and is well fortified at the entrance every way, mounting a large number of guns. At the entrance to the harbour there are two islands, the one being strongly fortified with a circular tower or castle upon it, to command the entrance and the whole of the harbour.

The town appears to be walled in and fortified at intervals; the houses are principally built of a whitish, slightly tinged with yellow, limestone, probably a similar stone to that of St. Thomas, and the sun shining full upon it gave it a bright and dazzling effect.

The houses are principally of the old Spanish type, having generally verandahs, balconies, jalousies, and other conveniences conducive to comfort in tropical climes. There are capacious barracks and hospital, and a large well-built

square residence occupied by the governor. We stopped there about one hour, delivering and receiving the mails, and then steamed on our way.

The island of Porto Rico, which is about 96 miles long and 36 miles broad, is very luxuriant and productive,—chiefly sugar, rum, &c., and it also breeds fine cattle, which command an extensive trade in the West India Islands. It must be a very valuable acquisition to the Spanish Crown.

The following day passed Mona Island, between Porto Rico and St. Domingo, which is very celebrated for turtle, and at nine a.m. saw the coast of St. Domingo in the distance. The following morning found us coasting along the island of St. Domingo, then presided over by the Emperor Solouque, a negro dignitary: he passed a decree to confiscate all the whiteman's property, and to stop their trading there, so as—to use a nigger phrase—that "the darkies may reign;" but their triumph was short-lived.

We entered the harbour of Jacmel, which is not very large, and is much exposed. The town is hid by a projecting point of land, so that not many houses are seen, and those that are seen are built of wood. The hills at the back of the town are covered with trees and brushwood, and some very fine cocoa-nut trees line the beach near the town.

I saw a kite flying on shore (reminding me of home), the handiwork of some little aspiring negro studying civilization.

We landed eight passengers and the mails, but the swell of the sea is so very heavy in the harbour, that the steamer could not lie to or anchor, and she had to be kept steaming in a rotary motion, to prevent her being washed ashore, the ground swell being so very heavy.

Left Jacmel and steamed slowly along, gradually losing sight of St. Domingo, which soon appeared like a cloud on the horizon, growing gradually fainter and fainter until lost to sight. A rainbow showed itself shortly after, which the sailors said indicated a squall: this came on very suddenly, and it rained heavily, the clouds showing themselves first, followed by sudden gusts of wind and rain, as peculiar to the tropics.

On the following morning we made the shores of Jamaica, "the Queen of the Antilles" looming in the distance; discerned the Morant Point Lighthouse on the east end erected by Mr. Gordon, coasted along the island of Jamaica, and a few hours brought us to Port Royal, where there is another lighthouse, and we were soon brought to anchor in the harbour of Kingston.

There are several small islands at the entrance, and the land at Port Royal, on which there is a military station, is low and flat: the deep water channel is narrow and circuitous, and we were obliged to take soundings to ascertain our course.

There were a frigate and three gun-boats lying at Port Royal, and the military authorities saluted us with two guns. On our arrival at Kingston harbour, we steamed up to the wharf with a merry tune from the band: we were received by a large concourse of people to welcome us, and learn tidings from home. A few passengers left us here, amongst them one colonel of the army, and two members of the Jamaica Assembly. The city of Kingston is a curiously built place; the houses are principally erected of wood, though there are many good brick and stone stores, and other buildings. The main streets run north and south, and at right angles to the harbour: other streets cross these at right angles, so that the town is uniformly laid out, but many of the streets are narrow.

There are numbers of trees amongst the houses, viz., cocoa-nut, cabbage, citron, star apple, papaw (whose fruit and leaves render the toughest meat tender), the mango, bread fruit, castor oil, banana, &c., which have a very curious effect, and are, doubtless, planted for shade as well as profit.

The principal streets are Harbour and King streets, and the Parade (a square) and several minor streets. The church is in the parade. The barracks, the theatre, a large Wesleyan Chapel, the Market-place (which is a square place surrounded with a wooden fence), Assembly Room (a perfect barn-looking place filled with old carriages, &c.); and near the Parade is the Roman Catholic Chapel, a large building with high-pitched gable-ended roof, circular-headed door and windows (the latter full of stained glass); and the Presbyterian Chapel, Gothic edifice of brick and stones,—the only building I saw with any pretensions to architectural merit. There are also Baptist, Independent, and Jewish places of worship.

The commander-in-chief's residence is situate in the northern suburb: a spacious house in the tropical style, with balconies and verandahs round filled in with jalousies, and the grounds are covered with beautiful shrubs and flowers,—the tamarind, orange, lemon, and lime trees, bamboo cane, Jerusalem thorn, oleander, African, Chinese, and other roses, jessamine, granadillos, scarlet cordias, mignionette-trees, Barbadoes pride, blue wreath, &c., in all their magnificent varieties of colours and tints.

The hotels in the place are very poor and miserable. The houses remind one very much of Chester: they are mostly built on wooden pillars, or the balconies and verandahs are supported on pillars in the front, and you walk under them as you would through the rows, except there are not always stores underneath. Some of the houses have square-headed windows, with outside Venetian blinds, and the spaces between the windows are filled in with jalousies, so that air may be freely admitted to the apartments,—in fact, the fronts look as if they were all windows.

To some of the houses there are corridors or balconies all around them. The principal entrance is sometimes the front and sometimes the back. If in the front, you enter the hall—the principal reception-room—through the gallery or balcony; if in the back, you pass through a passage between the bedrooms to approach the hall. The hall generally occupies the front of the floor, and the bedrooms are situate on each side the passage at the back part: this is the plan for one floor, and the others generally correspond. There is also here, as at St. Thomas's, a total absence of chimneys, except to the kitchens, which are detached from the residences.

The streets are generally in a very bad state; they are called macadamised, but they appear to me to be covered with loose sand or shingle, which in the wet season must be knee-deep in mud, and very dusty in dry and windy weather; the channels are in bad repair and badly laid out, and there is no under drainage; the scavengering is also very much neglected, except what Nature has provided in the black vulture, called "John Crows." Goats, pigs, dogs, &c. roam at large about the streets, which is a nuisance to the inhabitants, adding very much to the filth of the place. The authorities seem to think there is no remedy for the bad state of the streets in consequence of the heavy and destructive wash of the tropical rains; but if they were to visit some of the Danish islands, and even the English ones, Antigua for instance, they would see it was possible to have good and smooth street surfaces, also well-paved channels and an efficient mode of scavenging, even without the help of that useful and voracious bird the "John Crow."

The town is well supplied with water, works having been established to supply it from the streams collected at the base of the Blue Mountains. The principal station of the troops is at Newcastle, located in the mountains, 5,000 feet above the sea (the summit of the Blue Mountains is 6,739 feet above the level of the sea); they have there quite a European climate, and produce European vegetables and fruits of all sorts. This station is of immense advantage to the health of the troops.

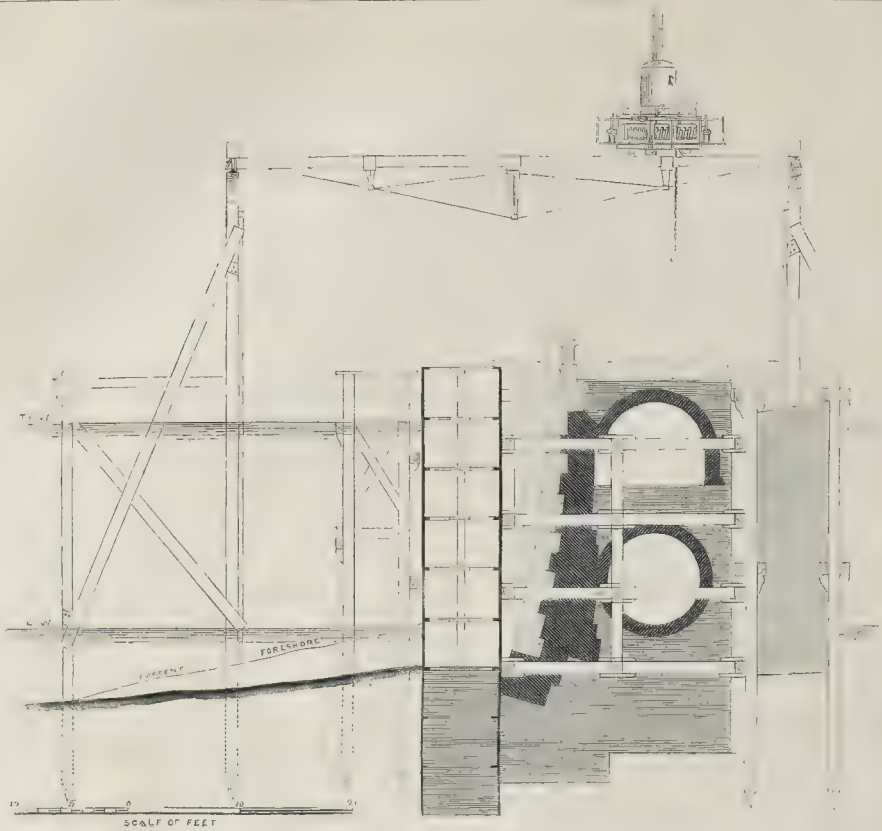
The harbour of Kingston is capacious and land-locked, supposed to have been formed by an earthquake that swallowed up the site upon which old Port Royal stood, and it is said that the tops of the houses are to be seen now in the bed of the harbour on a calm day. It is sheltered by a natural breakwater or palisade, on the extremity of which Port Royal is situate, about six miles from Kingston; it is strongly fortified, that and other fortifications in the harbour mount about 150 guns.

The town, in the heat of the day, presents a very quiet and deserted appearance; the negro men and women lounge about all day in the streets, seeking the cool shade of the houses, some selling fruit, others cakes and sweetmeats; they appear to lead a very unprofitable and indolent life.

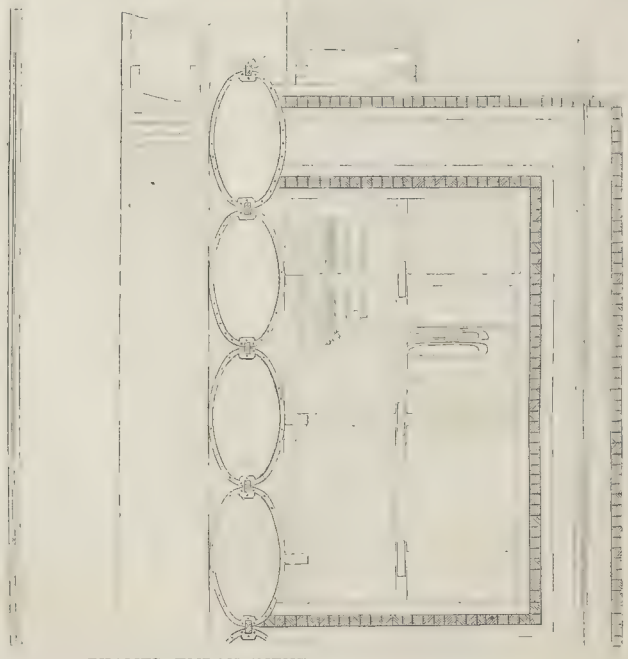
The public works do not appear to have been very well conducted. Great disputes have existed for some time past respecting the main roads, bridges, &c.; the expenditure on which, according to the last Blue Book, was 15,800*l*. They had also reconstructed the asylum, repaired the general and female penitentiaries, public hospital, and building in Spanish Town and Montego Bay, and bridges over the Rio Pedro and Rio Minho. The amount required to complete them was 7,050*l*.; and there has been already expended on them 16,175*l*.

Recently the colonial engineer has been discharged, in consequence of its being discovered he was improperly interested in a contract for a public tramway they were constructing, which has been alluded to recently in the House of Lords.

The island of Jamaica is about 150 miles long, and varies in width from 17 miles to 45 miles; its area is 4,292 square miles, and its population in 1851 was 465,000; in 1862, 441,225; showing a decrease of 23,775 in a period of about ten years. Many of the estates are thrown out of cultivation for the want of labour, and this evil is aggravated by the absentee proprietors, who leave their estates to the management of attorneys, managers, &c., to extract every penny from them and grind down the price of labour, at which the labouring population very naturally rebel. An able-bodied labourer would get from 10*d*. to 1*s*. per day. These remarks apply to most of our West India colonies, and I feel well convinced that a more liberal treatment on the part of the proprietors, &c., of estates, the scarcity of labour would not be so severely felt. The climate around Kingston is very warm: the maximum temperature is 89 degrees; minimum, 71 degrees. Hurricanes sometimes occur here, and the annual rainfall varies from 59 inches to 127 inches in a period of nine years. The geology of the island is slaty schist; above it, blue limestone; next, grauwacke, surmounted by red sandstone and clay. Recent investigators assert that the base is porphyry, sienite, and greenstone, supporting the deposition and transition rocks. White and blue limestone, bastard marble, quartz in some places, ribbon rock, formed of alternate porphyry, trap, hornstone, and petro silex, which varies in the different districts. Gold and silver, copper, lead, and iron, have been found in the Blue Mountain range and other places, which have opened a fine field for capital and enterprise, and which are as yet but little developed.



On the day following our arrival we were transhipped to the *Eagle*, a small steamer intended to carry us to our destination—Central America. My fellow-passengers were three ladies and one gentleman (five in all); these only, with the mails, were to traverse 700 miles of the Caribean Sea to British Honduras, which cannot form a very profitable speculation to the company.

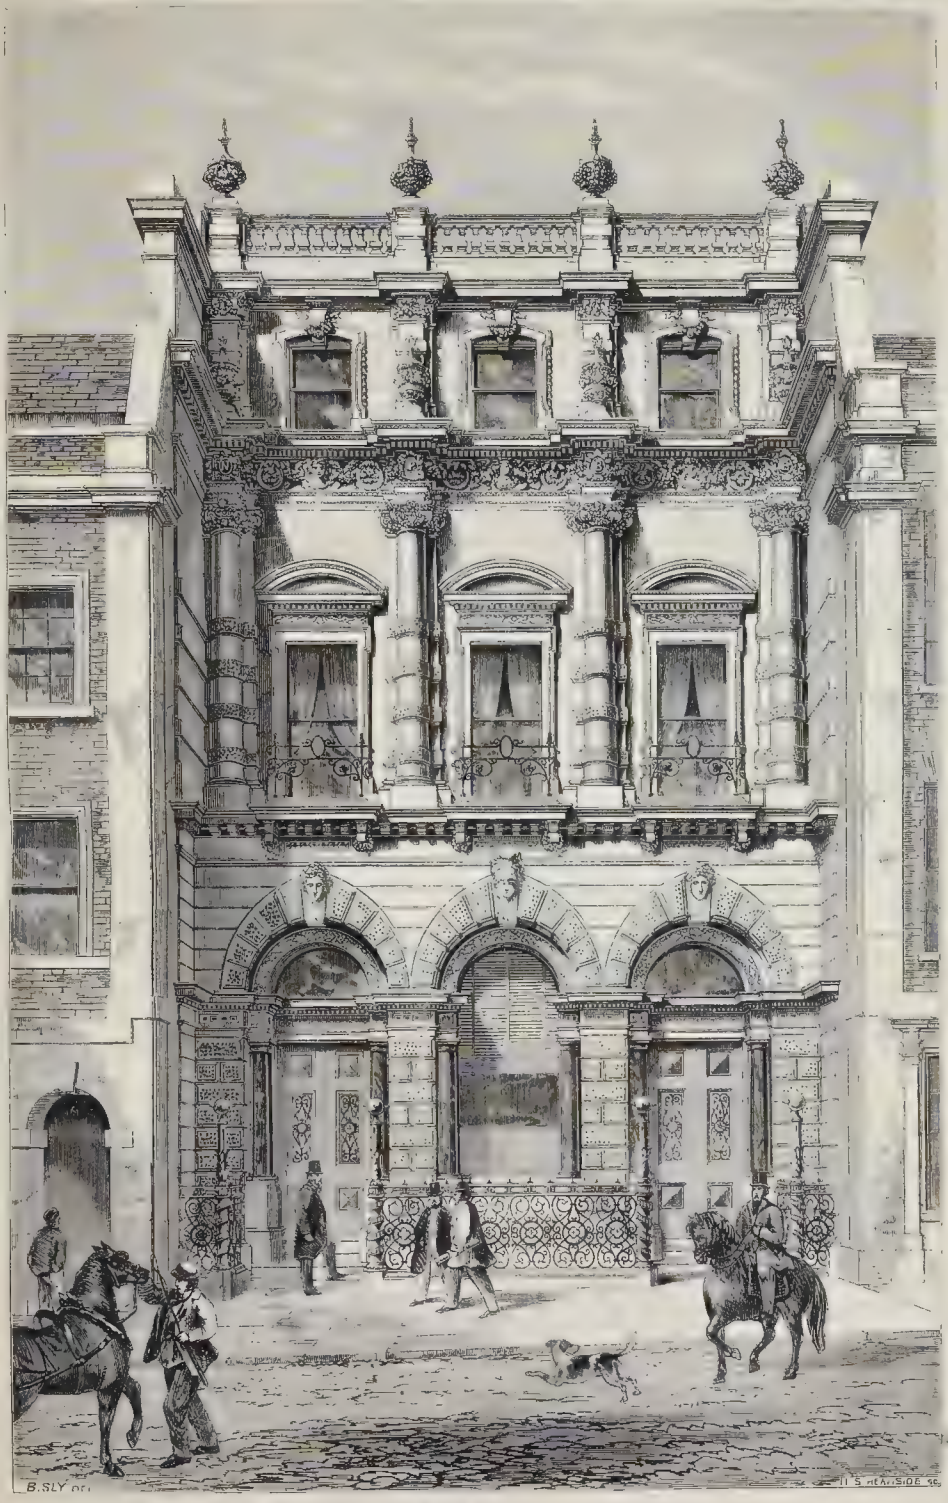


On the morning of the 6th, at five, the signal-gun was fired for sailing, after a stay of three clear days: as we got under weigh, we had another fine view of the harbour and the surrounding scenery; the sun rose resplendently, the east indicating another intensely hot day; that, with the sombre-looking mountains in the background, the shipping, a brig getting under weigh with all sails set, the picturesque houses of the town, the heavens presenting almost a cloudless aspect, with the exception of a few light fleecy-looking clouds to dim the azure canopy of heaven—presented a view of surpassing beauty worthy of the pencil of a painter or the theme of the poet.

On the 10th, Sunday, had divine service on board; and while we were at dinner Swan Island was announced as being in sight. It appeared to be unoccupied, except by a solitary fisherman, and is covered with trees and mangrove bushes. The Americans, I was informed, had planted their "stars and stripes" upon it; but what they intend to make of it I do not know, except as a depôt, from which they can at some future day intercept our Central American trade.

The Americans are very jealous of our possessing territory in Central America, and it was through their repeated protests that the Bay Islands (the rendezvous for General Walker and his fillibusters) were given up. On the 12th, we made half-moon Kay and the lighthouse, recently erected of iron at a cost of 2,100*l*., the contractor stating that he lost 400*l*. by the contract. It is 76 feet high, and is seen about sixteen miles distant; but notwithstanding that, wrecks frequently occur on the adjoining coral-reef. It is about sixty miles from Belize. B. C. E.

Steam Saw-mills destroyed by Fire. — In the Talbot-road, Ledbury-road, Paddington, the extensive range of premises belonging to Mr. W. Hide, steam saw-mill proprietor, have been burnt. The mills covered a space of ground nearly 100 ft. long and 40 ft. wide. The flames could not be extinguished until the mills were destroyed, as well as the machinery and stables, and the back part of the private residence is also seriously damaged. A charge of incendiarism has grown out of the destruction of the mills. At the Marylebone Police-court, a man who was employed as a labourer there has been accused of the offence.



THAMES EMBANKMENT.

Plan and Section: Coffer-Dam used in laying the Foundation Stone; Retaining-Wall, Sewer, and Sub-way; and Caissons forming the Front of the general Coffer-dam Construction in the First Contract.

See p. 573, *ante*.

NATIONAL PROVINCIAL BANK OF ENGLAND, CORN STREET, BRISTOL.

MR. W. BRUCE GINGELL, ARCHITECT.

NATIONAL PROVINCIAL BANK OF ENGLAND, BRISTOL.

The façade is in the Italian style, and though of small dimensions, is bold and effective. The frontage was set back by the Improvement Committee for the future widening of the street; and in order to obtain light for some of the lowest rooms, the façade has been recessed 4 ft. further, and the architectural lines are returned upon the party walls, thus giving additional importance to the frontage. The sunk area will be surrounded with iron palisading and standards, upon a moulded kerb of blue pennant stone, with folding gates before each doorway.

The basement story stands upon a moulded plinth of blue pennant stone, and presents three sunk arched recesses, the piers and vonssoirs being decorated with moulded and vermiculated rustics; the arches springing from a denticulated entablature, having an enriched fret upon the frieze, and each keystone being sculptured into a female head. The side recesses are doorways having coupled Doric columns of Aberdeen red granite, highly polished, and standing on pedestals of rubbed blue pennant stone, the capitals and bases of the columns being of Bolsover stone, and enriched with guilloches, &c. The centre recess is a window lighting the front consulting-room. At the first-floor level is a bold entablature with a block cornice, broken before each window to carry ornamental iron balconies.

The principal story presents four three-quarter Ionic columns engaged to piers wrought as quarter-pilasters each side; the group having moulded and vermiculated rustics thereon for about two-thirds of the height, and finishing with carved capitals. The spaces between the piers contain three windows, with architraves and circular pediments, with enriched mouldings and panelled friezes filled with laurel-leaves and bands. Above the columns is a denticulated entablature, broken over with columns and pilasters, certain mouldings being enriched, and the frieze carved and sculptured, forming one of the most prominent features in the design. In this ornamentation the title of the company has been indicated—the central compartment showing a bust of her Majesty the Queen, with medallions on each side bearing the plume and motto of the Prince of Wales, the background having the sceptre and mace, and the paddle and anchor, crossed in pairs; the whole connected with ribands and swags of fruit and flowers. In the dexter compartment is a bust representing "Peace." The sinister compartment has a bust representing "Plenty." Upon the cornice over each break stands a vase, adding materially to the importance of the principal story in the façade.

The attic has three windows, with moulded and enriched architraves and carved keystones; and between the windows are piers, corresponding with the breaks below, all rusticated, and supporting a small entablature, having carved swags of flowers over the piers, and terminating with a balustrade and pedestals, whereon stand four vases.

The whole of the façade, except where granite and Pennant stone has been used, is executed with Combe Down and Box weather stone.

From the street a corridor is entered, the walls being finished with Corsham stone, and divided into four compartments by piers, having rusticated pilasters thereon, with carved capitals; above which is a denticulated entablature breaking over the piers and pilasters, and continued through the side recesses. The entablature forms an impost, from which springs a vaulted ceiling, with semicircular moulded and panelled beams across the bays and over the recesses, with riband and berry enrichments and panelled fans, each compartment finishing in a circular flat panel, with enrichments and a centre flower.

Passing through large folding glazed doors, a vestibule is entered, also finished in Corsham stone, and having recesses, with moulded and panelled dado all round, and denticulated entablature. The ceiling is coved and groined. This vestibule is lighted by a large top light, and will be glazed with ornamental tinted glass, of an azure ground with white and gold diaper and purple interlacing border.

From the vestibule large glazed doors lead into that part of the banking-room which will be devoted to the public before the counter; and this is in itself an ante-room, executed with Corsham stone, and having moulded dado and denticulated entablature all round, with three large recesses, over which are semi-elliptical archivolts. The plaster ceiling is in formedto a square compartment, by moulded beams, enriched with oak-leaves and bands, from which it is coved down to the stone entablature, the coves being diapered with moulded lozenges, each filled in with a set flower.

The banking-room is 38 ft. square and 30 ft. high, exclusive of a semi-circular apse at the north end, over which is a large semi-dome light. Corsham stone is used for the finished surface of all parts up to the ceiling. A moulded dado runs round the room, above which are coupled pilasters, each wall space being divided into three compartments, the centre being double the width of the side ones.

The ceiling is executed in plaster. Coupled panelled beams, corresponding with the pilasters and filled in with laurel leaves, run across from each side and form a square central compartment, out of which rises a dome light 15 ft. in diameter; the circular vertical space between it and the flat ceiling being divided into eight parts, with curved moulded panels, having rosettes and swags and drops of flowers over and between the same, and laurel enrichment round the opening.

Around the dome-light the ceiling forms four large semi-circular openings, each enriched with laurel-leaves and mouldings, and having therein a flat light, divided into eight panes by moulded radiating bars. The dome, semi-dome, and four flat lights are glazed with ornamental tinted glass of an azure ground, with gold and silver stars, and purple interlacing borders.

In the apse, stone stairs lead to the repositories, which are divided into separate cash, plate, and deed safes, fitted up with iron shelves, warmed and ventilated, and furnished with thief-proof iron doors and gates.

In addition to the business part of the premises, a dwelling-house is provided, suitable for the residence of a manager.

The whole of the structure is fireproof, upon the system patented by Messrs. Fox & Barrett, all the floors and roofs being formed with rolled-iron joists, carrying concrete finished with cement surfaces to rooms and asphalte to roofs.

All the floors in the business part of the premises are paved with ornamental tiles, by Messrs. Maw & Co.

The carving and sculpture, and the models for the enrichments, have been executed from the architect's designs by Mr. T. Colley, of London.

The building has been warmed and ventilated by Messrs. Haden & Son, of Trowbridge.

The general contractor was Mr. J. Broad, and his sub-contractors were Messrs. Lewis & Sons, plasterers; Osborne, plumber; Browning, painter; J. Harris, joiner; A. Harris, smith; and Swinburne & Slater, glaziers. Mr. Pilkington, of London, executed the asphalte work.

The architect was Mr. W. B. Gingell, of Bristol, who designed the West of England Bank and the General Hospital. Mr. W. Long, who was clerk of works at the General Hospital, under the same architect, has performed similar duties at this building.

THE CRIMEAN MEMORIAL AT NETLEY.

His Royal Highness the Prince of Wales has laid the chief stone of a memorial to the medical officers who fell in the Crimea. The site of the memorial at Netley Hospital is immediately in front of the medical officers' quarters, a little to the southward of the hospital. When completed, the monument will be a prominent object seen from the Southampton Water. It will be erected from the designs of Mr. T. H. Lewis, and will be carried out by Messrs. Myers, by whom Netley Hospital and the surrounding buildings were erected. The memorial will be a cross, in the style of the early part of the thirteenth century, and will be 56 ft. in height to the top of the cross, and below will be a series of arches, forming an octagonal arcade, supported by columns of marble and Portland stone. There will be a lower arcade, in which will be placed a number of tablets, on which will be inscribed the names of those medical officers who fell during the whole of the Crimean war in the performance of their duty.

In reply to an address by Colonel Wilbraham, previous to laying the stone, the Prince very gracefully expressed the interest felt in the memorial, as in the hospital, by the Queen and by himself, and alluded to the interest with which it was also regarded by the Prince Consort.

SHALL NOT SHAKSPEARE HAVE A NATIONAL MONUMENT?

The inhabitants of New York, notwithstanding their present troubled condition, have set an example to London in raising funds, seemingly with very little trouble, for the purpose of rearing an important monument to the memory of Shakspeare. In a pecuniary point of view, especially, the result of the Tercentenary celebration in England has been very unsatisfactory. Even at Stratford-on-Avon, there will not be any other monument to the great poet than the church of the Holy Trinity. But what, we have already asked, could be more fitting for its purpose than this noble shrine? As to the causes of failure, it must be admitted that one was the flow of a large amount of the public enthusiasm and excitement into another channel. There was, however, too much attempted; and, instead of the whole country concentrating its energies with a view towards the erection of one national monument, worthy of the poet, many towns set up a rivalry, and endeavoured to raise money for the purpose of erecting memorials in their own several localities. Even in London the councils were divided: there was no harmonious action; and notwithstanding the long array of influential names of persons who were willing to assist in the realization of a metropolitan monument, the matter was never brought with business-like energy before the general public.

The question now is, are we to be entirely disheartened by this failure? are we to despair entirely of being able to rear a national and central monument in honour of Shakspeare, on a proper site *in London*, which was for many years the field of the poet's active life? for it should not be forgotten that if Stratford-on-Avon had the honour of being the place which gave the poet birth, to which he retired after his life labours, and where his ashes rest, it was in London that most of his marvellous works were produced, and where his fame was established.

It is very desirable that another attempt should be made by this generation to do him honour; and although at the commencement such an endeavour may not be attended with much enthusiasm or highflown hope, it may end in more effectual results. With restored confidence on the part of the public, it does not seem likely that there would be much difficulty in gathering together, at a suitable season of the year, an influential meeting at which a considerable sum would be subscribed; and the matter once set properly moving, money for this purpose might be obtained from many sources,—not only from persons of rank, wealth, and education, but also from the great masses of the people.

But besides the public, it seems clear that the Government has also a duty to perform in connexion with this memorial. To aid in honouring the memory of eminent men, large grants have been made from time to time out of the national exchequer. In this way the exertions of the warrior, the statesman, the philosopher, and man of science obtain recognition; but to few other English worthies do the people and the governing powers owe so great a debt of gratitude and admiration as to the immortal bard of Avon.

Many who take a great interest in the erection of a national monument to Shakspeare, have complained that they were in the dark as to the present position of affairs, and have asked if there were any or what available funds which might be made the gathering point of a general subscription; and if there were an active and responsible executive committee still in existence? It is satisfactory, therefore, for us to be able to state that the executive committee have announced that the balance of the subscription-list amounts to the sum of 1,280*l.*, after deducting the expenditure, which was 970*l.*; and that they unanimously make the explicit proposal to the subscribers and the public, that this balance be now invested, with a view to its increase, till the Thames Embankment shall have been formed, when a noble and appropriate site for a memorial may be secured near the Temple Gardens; or they may again try for St. James's Park, which we should prefer.

It is still to some extent unfortunate, however, that two metropolitan schemes simultaneously offer themselves; and it would be very desirable that some means should be taken to amalgamate these two into one. The working men's Shakspeare committee propose a national penny

subscription to erect a monument on Primrose-hill, *or elsewhere* in the metropolis, to consist of a marble statue, 10 ft. or 11 ft. high, besides the pedestal, and to cost 1,500*l.* with an iron and glass ornamental shrine for its inclosure, to cost 1,000*l.* more; the sum total to be raised by 600,000 penny, 100,000 sixpenny, or 50,000 shilling subscriptions.

The working men's committee have thus the advantage of the—rival committee, must we call it, in point of explicitness and definite objects in view. Could the one committee only be induced to adopt the views of the other, we have little doubt but that the joint committee, or the two co-operative committees, would soon have the pleasant need to re-consider and extend the idea of the resultant monument, from sheer superflux of funds.

ST. PAUL'S CHURCH, WOKINGHAM.

The new church of St. Paul, Wokingham, built by Mr. Walter, M.P., has been consecrated by the Bishop of Oxford.

The edifice, which stands on a site of two acres, intended as a burying-ground for the new district, is in the Decorated style of the fourteenth and fifteenth centuries. It forms a conspicuous feature in the landscape, and in plan comprises a chancel, a nave, a vestry and organ-chamber, and a tower with spire 170 ft. in height.

The entrance to the church is under the tower, which is placed at the north-west angle. The doorway is deeply recessed and richly moulded, the face of the inner portion being covered by diaper work with running foliage in the mouldings. The tower, which is about 20 ft. square at the base, has angle buttresses and two tiers of grooved and foliated pinnacles with flying buttresses to support the spire. It is pierced by two tiers of windows. The tower is surmounted by an open traceried parapet, the panels being filled in with carved work and foliage. From this springs the spire, which is built entirely of Bath stone. The nave has an arcade of six arches on either side. Above runs a clerestory of six windows on the south and five on the north side.

The roof of the nave, about 50 ft. in height, is open-timbered, plastered between the rafters, and finished with a light blue tint. The aisles of the nave are lighted by six windows on either side, filled with traceried heads. The roof of the aisles has arched and moulded principals. The nave is lighted by a west window, about 24 ft. high, with moulded jambs and traceried heads. The chancel is entered under a moulded arch enriched with double wreaths of roses and foliage. On either side of the chancel there is an arcade of two arches. The organ is placed within the arcade on the north side. The arcade on the opposite side forms the founder's private chapel. The east window has reticulated tracery of two orders, with richly polished bordering, the mouldings being deeply recessed. There are two windows on the north side of the chancel, having each two lights, with moulded and traceried heads. The chancel has a clerestory on the south side of four windows. The altar is approached by five steps. Under the east window is a recessed and carved arch, flanked on either side by buttresses, surmounted by carved and fluted pinnacles entirely composed of roses. Above the arch runs a moulded, carved, and embattled cornice, the whole width of the chancel, the spandrels above the arch being filled in with tracery. The background is composed of alabaster. The reredos is executed in Caen stone. The altarpiece, carved in alabaster, in two panels, represents the Last Supper and the Crucifixion. The chancel is paved throughout with Minton's encaustic tiles; the aisles with Minton's and Poole tiles intermixed.

There is no gallery in the church. The pews, of deal stained and varnished, are open. The windows are filled with stained glass by Hardman, of Birmingham. The east window represents the Transfiguration; the west, the Conversion of St. Paul. The north and south aisles windows are emblazoned with subjects from the life of St. Paul. The architect was Mr. Wodyer, of Graffham, near Guildford; and the work has been superintended by Mr. G. Redfern, his clerk of the works. The builders are Messrs. Wheeler & Sons, of Reading. The heating apparatus was by Messrs. Haden & Sons, of Trowbridge. The sculpture and carving have been executed by Mr. T. Nicholls, of Lambeth. The organ was by Willis. The bells, eight in number, were by Messrs. Warner & Sons, of London. The tenor bell sounds note F, and the weight is 17¼ cwt. The weight of the whole peal is 75 cwt. The bells are hung in a cast-iron frame, which is said to answer very well. By using iron they get over the shrinkage of the timber during the summer time, which often causes much trouble. Messrs. Warner have also by this means been able to hang this peal of eight bells all on *one level*, in a chamber 12 ft. 7 in. by 12 ft. 7 in.

The walls of the church externally are built of Bristol blue stone, with dressings of Bath stone. The wall inclosing the ground on the north side is built of the same materials.

BUILDERS' BENEVOLENT INSTITUTION.

The seventeenth annual general meeting of the friends and subscribers to this institution was held on Thursday, the 28th ult., at the London Tavern, Bishopsgate-street, for the purpose of receiving the report for the past year, for the election of president, auditors, and other officers in connexion with the conduct of the institution. Mr. Alderman James C. Lawrence, the president, occupied the chair. Among the gentlemen present were, Mr. George Plucknett (treasurer), Messrs. Joseph Bird, T. Cozens (the founder), R. Head, R. Watts, J. Thorn, W. Hutchons, W. S. Simkin, T. Stirling, W. H. Cooper, M. Hall, T. Howard, and several other gentlemen connected with the various departments of the building trade.

The chairman, having referred to his connexion with the Builders' Benevolent Institution through the introduction of Mr. Lee, a former president, and his admiration of its conduct and principles, expressed his gratification at its present position, believing it to be one that deserved support for the general charity which it set forth to bestow on those who, from old age or other circumstances, became necessitated and required its assistance. He concluded by requesting Mr. Harris to read the report.

The secretary then read the following report:—

"In presenting to the supporters of the Builders' Benevolent Institution the annual report for the past year, the directors have the satisfaction to inform them that there has been an increase in the annual subscriptions, likewise to the stock purchased in the Three per Cent. Consols.

The increase in the annual subscriptions beyond last year amounts to 37*l.* 5*s.* 6*d.*, while 92*l.* 10*s.* 4*d.* has been added to the Stock account; making the sums now standing in the names of the trustees 7,332*l.* 11*s.* 10*d.* for the relief fund, and 2,529*l.* 18*s.* 6*d.* for the building fund, being a gross total of 9,862*l.* 10*s.* 4*d.* stock Three per Cent. Consols.

Since the last general meeting the directors have to acknowledge the sum of 50*l.* bequeathed to the institution by James Faulkner, esq., late of Somerset Villa, North Lee Park-road, Kent; and a donation of 100*l.* from Mrs. Cubitt, of Denbies, Dorking, Surrey; and the directors take this opportunity of publicly expressing their best thanks to Mrs. Cubitt for her kind and generous gift in aid of the funds of the charity, and their expression of gratitude for the bequest of the late James Faulkner, esq.

Eight pensioners have been elected, viz., five males and three females; and eight pensioners have died during the past year, four males and four females, which enables the directors to announce to the subscribers and donors that the funds of the institution justify another election in November next. The male pensioners elected were, in November, 1863, W. Standfast and W. Goodwin; and in May, 1864, R. Langstaff, J. Jenkins, and W. H. Walsham. The females elected were as follows:—In November, 1863, C. A. Deacon; and in May, 1864, E. Efford and S. Clements. The male deceased pensioners are A. Richards, elected November, 1855, died October, 1863; W. Goodfellow, elected May, 1859, died December, 1863; W. Williams, elected November, 1856, died February, 1864; and W. Palmer, elected November, 1861, died May, 1864. The females are—E. Wood, elected February, 1853, died July, 1863; S. Wright, elected May, 1862, died August, 1863; A. Fould, elected November, 1849, died September, 1863; and M. Furrian, elected May, 1859, died May, 1864.

The annual ball, under the kind superintendence of the honorary secretary, Mr. Joseph Bird, realized a profit to the institution of 103*l.* 14*s.*

In recording the transactions of any charity where the objects sought to be accomplished are unvarying and confined to the trades engaged in building operation, there must necessarily be a similarity in the annual reports, the most gratifying fact to communicate being the progress obtained. This the directors of the Builders' Benevolent Institution have the satisfaction of announcing to their supporters; and they hope, both by recommendation and personal influence, the promoters of the institution will endeavour to increase their funds, and thereby extend their sphere of usefulness.

Appreciating the kind and efficient services rendered to the charity by the president of the institution for the past year, the directors have the pleasure to announce that Thomas C. Lucas, esq., has kindly consented to become the president for the year ensuing."

The reception of the report was then put to the meeting, and unanimously adopted.

The president, Mr. Thos. C. Lucas, was then elected, as were also the various officers for the effective performances relative to the welfare of the institution.

The usual complimentary votes concluded the proceedings.

ROYAL PARKS AND GARDENS IN ENGLAND IN 1738.

At a time when a stir is being made in and out of Parliament, touching public parks, gardens, and thoroughfares,—their abridgment and their enlargement, the following royal sign manual warrant, now first published (George II. king), in which the dimensions of several of them are laid down to a nicety of acres, roods, and poles, will be read with interest. Possibly some reader of the *Builder* who is skilled in measuring land (and the *Builder* must have many so accomplished) will kindly compare the parks as they exist in 1864, with the parks as they existed in 1738.

Charles Bridgman died of a dropsy at his house at Kensington, on the 19th July, 1738, and Henry Wise (London & Wise), at Warwick, on the 15th of December in the same year. What became of their papers, plans, &c.? They must have been both curious and abundant. Wise, it was said, died worth 200,000*l.*! Who was Samuel Milward? John Kent was no doubt a relative of William Kent, the architect.

Peter Cunningham.

"George R.

Whereas, we are minded that our Royal Gardens at St. James's and at Kensington, which, with the rest of our Royal Gardens, were lately under the conduct, care, and maintenance of Charles Bridgman, *deceased*, shall for the future be severed from the rest of our said Royal Gardens, and be under the conduct, care, and maintenance of a person specially to be appointed for that service, and accordingly we are graciously pleased to nominate and appoint Samuel Milward to be our chief gardener of our said Royal Gardens at St. James's and Kensington, which contain 172 acres, according to the particulars thereof hereunder specified,—that is to say:—

	a.	r.	p.			
At St. James's.						
The Garden				1	3	11
At Kensington.						
The Old Gardens, from the greenhouse down to the road	17	1	22			
The new plantation, kitchen garden, conch-court, and piece before the stoves	38	0				
The new paddock, with all the walks, lawns, wood, and other quarters contained therein, together with 8*a.* 2*r.* 32*p.* of gardening, called Bays Water Gardens, some time since purchased of — Seymour, esq.	114	3	7			
Making in the whole				170	0	29
				172	0	0

And we are further graciously pleased to grant and allow that the said Samuel Milward shall have and receive after the rate of 15*l.* per acre for the whole charge of keeping, maintaining, and upholding the said 172 acres in the manner and method prescribed by the scheme executed under his hand and seal, which is hereunto annexed, and that the said allowance of 15*l.* per acre, which may be reckoned to amount to the sum of 2,580*l.* by the year, shall commence and be accounted payable unto him from the day of the death of the said Charles Bridgman exclusive; and we are further graciously pleased to grant and allow that the several garden-houses, sheds, and places heretofore used and possessed as belonging to our Royal Gardens afore described, shall be had, taken, used, and be, and remain in the possession of the said Samuel Milward, for the use of himself and servants during his continuance in the said office of chief gardener. And, moreover, our will and pleasure is, and we do hereby authorise, direct, and command you to pay, or cause to be paid, unto the said Samuel Milward or his assigns, by the hands of the 'paymaster of our works' for the time being, the said yearly sum of 2,580*l.*, from the day of the death of the said Charles Bridgman, as aforesaid, by quarterly or other payments, as you shall think fit, for and in consideration of his service, care, pains, and expenses in ordering, maintaining, and keeping up our Royal Gardens afore described, according to the terms, conditions, and agreements in the said scheme contained. And our further pleasure is, that this our warrant, and the scheme thereby referred to, be entered with the 'Surveyor of our Gardens,' to the end he may have full cognizance thereof, and take care, from time to time, that the said Samuel Milward do well, truly, and effectually comply with, execute, and perform the said scheme in all things thereby stipulated; and that we be not burthened with any expenses relating to our said Royal Gardens, contained within the said ad-

measurement as aforesaid, other than such as by the said scheme are agreed to be borne and defrayed by us; and that the said warrants and scheme be also entered in the 'office of our Works,' to the end of the officers of 'our Board of Works' may strictly regard our service in all things appertaining to them: and for so doing this shall be your warrant. Given at our Court at Kensington, the 17th day of August, 1738, in the twelfth year of our reign.

By his Majesty's command,
R. Walpole,
Sundon,
T. Winnington.

To the Commissioners of our Treasury."

"George R.

Whereas, we are minded that our Royal Gardens at Windsor and New Market, which with the rest of our Royal Gardens were lately under the conduct, care, and maintenance of Charles Bridgman, deceased, shall for the future be severed from the rest of our said Royal Gardens, and be under the conduct, care, and maintenance of a person specially to be appointed for that service; and accordingly we are graciously pleased to nominate and appoint John Kent to be our chief gardener of our said Royal Gardens at Windsor and New Market, which contain 6a. 3r. 16p., according to the particulars thereof hereunder specified,—That is to say:—

	a.	r.	p.
At Windsor.			
The Kitchen-garden	0	0	33
The Fruit plantation next the wall in Mastrick*	2	3	30
The little House-garden	3	0	33
	6	1	16
At New Market.			
The Gardens	0	2	0
	6	3	16

And we are further graciously pleased to grant and allow that the said John Kent shall have and receive after the rate of 15*l.* per acre for the whole charge of maintaining, keeping, and upholding the said 6a. 3r. 16p. in the manner and method prescribed by the scheme executed under his hand and seal, which is hereunto annexed, and that the said allowance of 15*l.* per acre, which may be reckoned to amount to the sum of 102*l.* 15*s.* by the year, shall commence and be accounted payable unto him from the day of the death of the said Charles Bridgman exclusive. And we are further graciously pleased to grant and allow that the several garden-houses, sheds, and places heretofore used and possessed as belonging to our Royal Gardens afore described shall be had, taken, used, and be and remain in the possession of the said John Kent, for the use of himself and servants during his continuance in the said office of chief gardener. And, moreover, our will and pleasure is, and we do hereby authorize, direct, and command you, to pay, or cause to be paid, unto the said John Kent, or his assigns, by the hands of the 'paymaster of our works' for the time being, the said yearly sum of 102*l.* 15*s.* from the day of the death of the said Charles Bridgman, as aforesaid, by quarterly or other payments as you shall think fit, for and in consideration of his service, care, pains, and expenses, in ordering, maintaining, and keeping up our Royal Gardens afore described, according to the terms, conditions, and agreements in the said scheme contained. And our further pleasure is that this our warrant and the scheme thereby referred to be entered with the 'surveyor of our gardens,' to the end he may have full cognizance thereof, and take care from time to time that the said John Kent do well, truly, and effectually comply with, execute, and perform the said scheme in all things thereby stipulated; and that we be not burthened with any expenses relating to the our said Royal Gardens, contained within the said admeasurement as aforesaid, other than such as by the said scheme agreed to have been borne and defrayed by us; and that the said warrant and scheme be also entered in the office of our Works, to the end the officers of our Board of Works may strictly regard our service in all things appertaining to them: and for so doing this shall be your warrant. Given at our Court, at Kensington, the 17th day of August, 1738, in the twelfth year of our reign.

By his Majesty's command,
R. Walpole,
Sundon,
T. Winnington.

To the Commissioners of our Treasury.

* A place so named by the Duke of Monmouth, and much ridiculed at the time and long after.

CHARING CROSS RESTORED.

An enthusiastic correspondent expresses wide wonder that we have not, "like all the rest of the press," praised the Charing Cross Hotel Company's "pretty idea" of setting up a restoration of Charing Cross (the cross of the *chère reine, perhaps*), in front of their hotel. Well, the fact is, we are not bound to speak of everything; and as we are unable to go with "the rest of the press" in this instance, we were contented to say nothing. It seems to us a mistake in two ways; pretty as the idea is. If Charing Cross is to be restored it has no business on this spot, unless it is to be regarded merely as a sign; and in the next place it is filling up space where there is none to spare, and will be found a nuisance before long. It will doubtless be done well: the name of the architect directing it is sufficient assurance of that; but, like the Wellington Clock Tower at London Bridge, its removal is merely a question of time.

ART-EXHIBITION AT MALINES.

An Exhibition of Works of Art, of the Mediæval and Renaissance periods, on loan from churches, convents, corporations, guilds, and private collections, will be held in Malines, to open on the 29th inst., and close on the 25th September. It will form the richest collection of works of Flemish art, we understand, ever yet brought together. Very many of those belonging to convents are not to be seen without great difficulty at other times. The practical carrying out of the Exhibition has been entrusted to Mr. Weale, of Bruges, who is also charged with the editing of a catalogue, divided into ten sections, each arranged chronologically. M. Edouard De Bleser is the secretary.

RACE-STUD-STABLES AT NEWMARKET.

An extensive range of stables for the accommodation of race-horses is about being built, under the direction of the Newmarket Hotels Company, who have commenced operations, and obtained possession of the Rutland Arms Hotel and land adjoining. The first block of buildings will consist of about 100 loose boxes and stalls, with residence for stable groom, coach-houses, granaries, boys' dormitories, drying room, boiling house, lavatories, and other conveniences, to render the establishment complete. The loose boxes are planned 18 ft. by 10 ft. and 13 ft. high, the stalls each 6 ft. 3 in. wide and 18 ft. deep. The whole are ventilated, and drainage is provided. The water supply will be formed by collecting the rain-water from the roofs in four large reservoirs, with filtering apparatus, and pumped up at different points as required. The mangers, fittings, division-heads, and sills, will be of iron enamelled, and will be constructed especially for these stables by Messrs. Johnson, Bros., of London. The total cost will be about 10,000*l.*, and there is little doubt they will bring income to the company, as superior accommodation is much wanted in this training nursery for English race-horses.

Plans have also been prepared for the entire remodelling and additional accommodation and improvements at the Rutland Arms Hotel.

The works are being carried out under the superintendence of Mr. John D. Ellis, architect, London.

RAILWAY REFORM.

THE TRIM OF TRAINS IN TRANSIT.

The two modes of ensuring something like safety to passengers, to which we lately drew attention as probably the best on the whole which can be suggested, namely, either a regular watchman's beat along the train, or, short of that, glass compartments, have both been adopted by the Board of Trade in a circular just issued to the secretaries of railways. In this communication the lords of the committee of Privy Council for Trade, by their secretary, Mr. Booth, say:—

"Several expedients have been suggested as calculated in some degree to further the desired object.

One expedient for guarding against offences in railway-carriages which has been proposed, is that of placing windows between the compartments of each carriage. As these windows might be provided with curtains (?), the privacy of the carriages need not ordinarily be interfered with.

As an expedient for providing means of communication between the *guard* and the *passengers*, it has been suggested that every vehicle forming part of a passenger train should be furnished with a footboard and handrails, which would admit of the guard (or, in case of emergency, other persons) passing along the train.

It appears to my lords deserving of consideration whether this expedient, guarded, of course, by carefully-framed regulations to prevent abuse, might not be generally adopted with very beneficial effects.

The use of a cord running along the train, by means of which the *guard* can attract the attention of the *engine-driver*, has now existed on some lines so long as to prove that there is no difficulty in *its* application.

I am to request that my lords may be favoured with the opinion of the directors as to the practical value of arrangements of the nature specified, and also with any suggestions which the directors may think adapted to accomplish the ends which my lords have in view.

I am also to request that my lords may be informed what means are in practice on your line for effecting communication between different portions of a train while in motion."

It is to be earnestly hoped that this communication will lead to a complete reform in the present mal-arrangements. Indeed, something *must* be done. The public will not submit any longer to be robbed and murdered merely that the pockets of railway shareholders may be spared. Should railway directors refuse to do anything effectual now, they may find themselves in the not very pleasant predicament of being charged with being accessory before the fact to some of those grave crimes which are only rendered possible by their inexcusable neglect to provide the public with the sure means of preventing them.

Before many years have passed, indeed, the working management of our railways must be greatly changed and improved in more ways than one in order to prevent a large and increasing loss of human life and damage to human limbs. To a remarkable extent the railway system is spreading in all directions, and the spaces which at one time were thought far more than sufficient for any traffic which might be required at termini, stations, and junctions, are now found to be dangerously restricted. In many instances the chief stations have become crowded scenes of confusion, and the junctions places of extreme danger; take, for instance, the Stepney junction on the North London Railway, through which the trains run to and fro in various directions with startling rapidity (we would like to know how many trains pass the platform in a day, and the average number of minutes which elapse between each). It is clear to the most casual observer, that, in order to prevent some terrible calamity, everything depends upon the vigilance of two or three persons: a single instance of want of carefulness or watchfulness on their part, or the least failure in the signals, must inevitably lead to serious damage. We are bound to say, however, that this station seems to be managed with both ability and watchfulness; and that the master, in his activity and politeness, is a sort of Palmerston of station-managers. It is satisfactory to observe throughout the length of this line, the improved civility of all the officials—since, in years past, we were obliged more than once to complain of want of attention and rudeness of manner. The announcement of the various stations is also far more distinct than formerly. But it is not specially with those who have direction of railway traffic that we have now particularly to do: it is rather with the general system, which causes congestion and confusion at so many points,—which, in an ill-judged spirit of economy, causes one junction or station to be applied to far too many uses, and prevents the introduction of necessary alterations in carriages and signals. The underpayment and overworking of those *employés* to whom, in the present state of affairs, the lives of the public are mainly intrusted, is another point urgently needing reform.

When glancing at the growth of the English railways, it is worth while to remark, that all the arrangements were in a great measure the result of chance, and the offspring of necessities which were developed by degrees, as an entirely new plan of conveyance was brought into working trim. Just as the noblest orders of our architecture are the development and improvement of the simple and rude wooden houses of antiquity, so the carriages, &c., on our railways are the promptings of peculiar requirements, which however, in principle, have been but little changed. When George Stephenson planned the Stockton and Darlington Railway, it was intended almost entirely for the conveyance of coal and other minerals. It was little thought, in those days, that the railway would supersede the stage-coach in the conveyance of passengers; but when this line was opened, workpeople and persons going to and fro on market-days, availed themselves, in the first instance, of a

passage on the trucks, without payment. The demand for this manner of travelling suddenly increased, and a charge was made; but, for a long time, there were not even covered carriages for passengers, although for goods which required care covered vans were provided, which were made without any attempt at ornament or the picturesque in form. They were simply large boxes made of sufficient strength to suit the intended purpose; and even now the chief part of the railway passenger-carriages have been but little changed in their general plan. In England, where the railway system was originated and brought into working order, the arrangement of the carriages is not so good as in many places abroad where improvements on our more antiquated system have been made. Here we, by chance, were led to adopt a plan of the moment, and have stuck to it, repudiating improvement. It is to this that attention should now be especially directed: the various incidents which have excited the public notice during the last month or two, show the necessity for this; and the pages of the newspapers contain all kinds of suggestions of means for meeting the evil. The chief difficulty seems to be the cost which would be required to alter the carriages now in use, or to replace them with those of a better construction; but, as we have said, something *must* be done; and it is to be hoped the Board of Trade will persist in the effort to induce railway directors to do what is so urgently requisite.

Sir,—The adoption of curtains in the carriages of the South-Western Railway to the glass panels which were proposed originally in your journal, appears to me to be quite unnecessary, and in some cases would destroy the whole proposition. For instance, in a second-class carriage there are four compartments: suppose there was a commotion in one of the middle compartments, the two adjoining ones might be empty, and then the passengers in the other could not see through because the curtains were drawn. The public had much better give up a little privacy for the sake of greater security. A. R.

ST. DAVID'S CATHEDRAL.

Renewed efforts are now being made to obtain funds for the reparation of the tower and the restoration of the choir. The tower is in a very dangerous condition, as may be judged of from the following passage in a report made by Mr. Scott in 1862, on which the chapter are now seeking to act:—

"The present condition of the tower is in the highest degree alarming, and till it is restored to a state of security, it is quite useless to think of any extensive reparation of other parts of the building.

The western piers consist each of two portions, the parts toward the nave belonging to De Leia's work of the twelfth century, and those toward the transepts having been added after the catastrophe of 1220. Of these, the elder or western portions are literally, at least so far as they are open to examination, shattered to fragments, and the same process has extended itself in a less degree into the later or eastern parts of each pier; in fact, the only security which the tower has from actually falling, is the buttressing it sustains from the walls of the transepts and the nave, though the latter have themselves severely suffered under the undue pressure thus brought upon them.

The arch facing the nave is very much injured, and the wall which it sustains, up to the commencement of the latter stages, is utterly disintegrated; so much so as to render it dangerous very closely to investigate the defects: and the same state of disintegration extends itself some feet into the north and south walls, but especially the former, which is at this point crushed throughout its whole thickness.

It will be seen from what I have stated, that the whole remaining portion of the first tower is crushed and left at the mercy of the various walls which abut against, and so to speak, bolster it up; and that this terrible failure extends itself to a certain distance into the later, and, in themselves, better constructed portions; in fact, that of the four supports of the tower, two are sound, and two wholly untrustworthy.

The upper stages of the tower appear to be, in themselves, strong and substantial; but, being well supported towards the east, and ill towards the west, it naturally follows that a frightful crack runs up the north and south sides.

These cracks, however formidable they may appear, need not cause alarm as to the actual strength of those upper walls through which they pass; but, as sympathetic of the radical evil which exists below, they are only too significant. I need hardly say, that to remedy the tremendous failure which I have just described, will be a very difficult and very costly operation. It would be madness, in such a case, to attempt any repairs without the previous introduction of such a system of shoring, as would, if necessary, be capable of sustaining the entire load which now rests upon the damaged piers. It would be useless in this report to give any detailed description of such a system of shoring. I have, however, most carefully considered it, and, I believe, see my way pretty clearly to its construction.

The general course to be followed would be this:—

First, to bind together the walls of the upper stages of the tower with massive ties of iron, aided by stays of timber, so as to render it impossible for the walls to spread. Then to construct incompressible foundations, on which the shoring is to rest. Thirdly, to erect shoring of the most massive description under the north and west arches (the south arch remaining walled up as at present) and against the two western piers,—constructed on such a system (as before stated) as would be capable, if necessary, of sustaining the whole weight of that side of the tower.

After this would commence the operation of reconstructing, in a greater or a less degree, as may be found requisite, the two western piers. This would be done very gradually, and in small portions at a time, a moveable system of shores being used to sustain the work in immediate contact with the parts operated on, and capable of being shifted from time to time as the work rises. In this manner one pier, with the walls immediately insisting on it would be repaired (indeed in a great measure reconstructed), and then the other would be undertaken in a similar manner, the main shoring remaining untouched till the entire work is accomplished.

This operation, I may mention, has been successfully performed in several instances, as at the cathedrals of Hereford and Bayeux; at Sherborne Minster; at the churches of St. Mary at Nottingham, St. Mary at Stafford, and at Aylesbury. The structural defects in the upper portions of the tower will be readily repaired when the supporting piers and arches have been rendered substantial."

At a meeting of the building committee, on the 23rd ult., it was reported that 8,309*l.* had been subscribed by 137 persons. There were four tenders produced, as follows:—

Names of Contractors.	First Division.	Second Division.	Third Division.	Fourth Division.	Total.
Pollard.....	8,468 0	2,120 0	2,883 0	510 0	13,990 0
Hood & Son...	9,550 6	2,355 14	3,363 19	544 0	15,813 19
Williams	10,238 19	2,472 16	3,442 11	485 1	16,639 6
James & Price	10,476 0	2,921 0	3,602 0	385 0	17,384 0

The first division comprised the lower part of the tower and the choir.

The second division comprised the upper part of the tower.

The third division comprised the choir aisles and the choir arcades.

The fourth division comprised the dry areas and drains.

Mr. Pollard's tender was accepted, with an instruction to complete the first and fourth divisions before proceeding with either of the other two divisions. The meeting resolved that the work should be commenced at once.

It is hoped that all friends to the restoration of the mother church of Wales, and of one of our noblest cathedrals, will lose no time in sending a subscription.

MEMORIAL TABLETS, LONDON HOUSES.

PRESERVATION OF SITES.

One of many correspondents on this subject writes,—Amongst notable residences let me remind you of the house where Milton resided in the latter period of his life in Petty France, Westminster. In an upstairs parlour in this house, overlooking St. James's Park, he wrote the last books of "Paradise Lost." It became the property of Jeremy Bentham, who placed a tablet over the door, with this inscription,—"Sacred to John Milton, Prince of Poets."

It is pleasant to read in your pages the notes of acquiescence which come in favour of a suggestion which has been so long since urged in the *Builder*. In the best of causes it is generally a difficult thing to move public opinion in its favour: it requires a strong force to put a large ball into motion; but the impetus once gained, the onward movement is comparatively easy: so it is hoped it will be in connexion with the subject which you now advocate. Just now twenty earnest persons banded together for the purpose of carrying out a system of marking the London houses of eminent men and *women*, would soon have the strength of their force increased, and a sufficient revenue at their disposal for carrying out any useful purpose.

Worthy as is the task of noting the houses of famed personages, the attention of such a society as you have hinted at might be well directed to the marking of the sites of buildings, &c., which, having a historical or other interest, have long since passed away. Why, for instance, should there not be placed on the old gateway of St. John's-square, Clerkenwell, not only some particulars of the *Gentleman's Magazine* (the most venerable of our monthly magazines), and of Dr. Johnson's connexion therewith, but also that "on the site where the modern houses to the north of the gate stand, there existed, in days gone by, the stately palace of the once powerful and wealthy order of the Knights of St. John of Jerusalem?" Scores of other sites might be mentioned, the marking of which would give rare interest to many of the metropolita thoroughfares. But besides these matters ther is another duty which the society of the preser generation owes to the next and succeedin ones, *and this is to endeavour to preserve the hi torical land-marks which now exist.* Within th boundaries of the City of London there are mar stone marks of very great interest, which, with out any effort being made for their preservatio are rapidly passing away from the view. number of these are most interesting records the Great Fire of 1666, and of important even of various dates. The variety of those stone re cords is as great as is their growing curiosit The *Builder* has referred to several of these, bu many more old historical land-marks should b attended to. The very circumstance of a societ being established for the preservation of thes things, would move even corporate authorities t do their duty.

Such a society as is shadowed forth, but whic it is hoped will soon become a substance, woul also affect the custodians of churches, chapel &c., in which are inscriptions which cannot b well made out. In consequence of the want attention to keeping clean the particulars these bequests, the poor are often cheated, an the intentions of kindly hearted individua frustrated.

Besides, if we in London set an example in th way, there is the hope that throughout th provinces there may be a spirit of the sam kind shown, and that in large towns not of famous interest may in the same way b preserved. There is more than I can say wi come to your mind in connexion with this su ject; but in conclusion I would suggest, tha notwithstanding the claims upon your tim you might be willing to act personally in co nexion with this movement.

A London Wayfare

SANITARY MATTERS.

Grantham.—The report of Dr. Bristow, th Government inspector, sent down to Granthar a short time ago, was read by the town clerk a recent meeting of the council. Dr. Bristo alludes to complaints, made by some inhabitan of the town, as to the water, the quality of th gas, and drainage. He considers that when th water was pumped from the river it may ha been injurious, but that on his visit it was good quality. He attributes the fever whi prevailed before he came to the state of some the cesspools, but states that the evil had be abated by the means adopted for the purpose. H recommends the adoption of the Local Gover ment Act, or the adoption of the Board Health Act; and that Spittlegate and Litt Gonerby should unite with Grantham in carr ing it into effect.

Whitehaven.—Mr. Hawkshaw's delay, sa the local *Herald*, in forwarding the plans a specifications for the sewerage of Whitehave has induced the trustees to pass a strong resol tion; and the writer then goes on to say: "Though we confess to a feeling that we shou not now like to see the streets of a town whi is veritably 'built upon one great middl opened up until the fierce dog-heats and dam of autumn are passed, yet we would urge up the trustees the propriety of having all ready begin the work as soon as may be advisab The fever of last year still hangs, we regret learn, over the whole union, though not in epidemic form; and the Board of Guardians, their meeting on Thursday, prudently resolv to issue placards, calling upon the public to s to the removal of all nuisances, and informi them how to proceed about it. We hope t Trustees' Sanitary Committee are directing the attention to the same thing in town."

Dronfield.—A correspondent of the *Sheffi Independent* requests liberty "to call the atte tion of that slumbering body, the Dronfield Loc Board of Health, to the fearful state of the to for the want of water. The chief supply depending upon one well; and during the fo and-twenty hours it is never without watche waiting for a supply, which has to be ladled o often mixed with mud. The Board has much answer for, on account of this great want of o of the most essential necessaries of life; and responsible, inasmuch as it could have been p vented, had the necessary duties, which call that Board into existence, been performed. T town has been taxed and rated, but its presc state will show that nothing has been done. T

people, without exception, regret the Act which gave them a Local Board."

Rotherham.—The inhabitants of this town, who, with new water-works, have suffered so much from want of water, have now every reason to hope that the works which are to bring into the town an abundant supply, will soon be commenced. The supplying of the pipes has been entrusted to the Stavely Iron Works Company. The contract of Messrs. Chadwick & Thirlwall, builders, Masbro', for constructing the reservoirs, excavating the trenches, &c., has been finally accepted. The Board of Health have succeeded in making arrangements for the possession of the land through which the pipes will pass, and the money required for executing the works has been obtained. The contemplated scheme promises a more plentiful supply of water than was at first anticipated. Cases of fever, however, especially in the neighbourhood of the Holmes, and other densely-populated parts, are, meantime, again becoming numerous, and doubtless will become more so should the present hot, dry weather continue. It is hoped the present board will use every exertion in pushing forward a scheme which promises to do so much for the cleanliness, health, and comfort of the inhabitants of the town.

Wallsend.—The inhabitants having determined on applying the provisions of the Local Government Act to their township, the necessary preliminary arrangements were taken; and a meeting for the purpose of settling the boundaries of the district has been held, Mr. Morgan, the inspector appointed by the Home Secretary, being present. The petitioners were represented by Mr. Hodge, of Newcastle: Mr. Kewney appeared on behalf of those who opposed the introduction of the Act. After the views of both parties had been set forth, it was agreed to endeavour to obtain the sanction of Sir George Grey to an arrangement that the whole of the township should be included in the boundaries.

Sevenoaks.—Few towns in England, with a greater need for a supply of water, have it yet more abundantly around them than Sevenoaks, and frequent unsuccessful attempts have been made to bring it into the town. A new company is now being formed to supply this necessary want, with a capital of 12,000*l.*, more than half of which has already been raised, and the directors only ask for two-thirds of the amount to commence with. The water is to be raised from a shaft connected with the tunnel on the new South Eastern Railway, the water, of which there is a most abundant supply, now running to waste. It has been analysed and found, it is said, to be of an excellent quality. The directors hold out the inducement of a 6 per cent. dividend to shareholders.

CONTINENTAL NEWS.

Vienna.—The cross which is to surmount the spire of St. Stephen's Cathedral will be fixed, with great ceremony, on the 15th of this month. We have already adverted to the enormous finial which is now being put up, and which measures 15 ft. across. The ball and cross which will surmount this finial are being manufactured at the works of the Southern Railway. The former consists of eight pieces of wrought iron, rivetted together, over which is laid a thick covering of copper: it is 3½ ft. in diameter, and weighs 12 cwt. The cross weighs 3 cwt. Before the present restoration the tower and spire rose to a height of 439 Vienna feet (455 ft. English), but now an additional height of 15 ft. has been gained, whereby it obtains the first place, in point of height, amongst the towers of Europe. Strasbourg is 466 ft.: Ulm would have been 491 ft. high, but was never finished.——The committee appointed to inquire into the proposed scheme for building new Houses of Parliament has given its opinion in favour of two separate buildings. They advise the erection of the upper house on what is called the Burg-ring, near the barracks of the Hungarian Guard, whilst the lower house is to be built opposite the Opera House.—— The Vienna Society of Arts has collected 15,000 florins for the purpose of ornamenting the Elizabeth Bridge with statues; but it is stated that 7,000 florins more will be required, making a total of over 1,800*l.* The stone chosen for the eight figures to be placed on this bridge, was taken from the quarries near Pola, in Dalmatia, and is now being worked by various Vienna artists.

Berlin.—Already the late success (?) of Prussian arms has produced a work of art intended to commemorate the Danish campaign, Schultz, a sculptor, of Berlin, having composed a group which will probably find a place in one of the parks. The subject is Borussia seated, and crowned by Victory. On either side are two warriors, sheathing their swords.——The new Orangery at Sanssouci is about to receive twelve marble statues, 8 ft. high, representing the months of the year.

Munich.—Mr. Schnorr von Carolsfeld, director of the Royal Academy of Painting at Dresden, has received the commission to finish the remaining frescoes in the Nibelungen galleries of the Palace at Munich.——The public subscription for the national monument to the late king had reached 16,000*l.* at the end of May.

Stuttgart.—The budget for 1864 contains an item of 66,000*l.* for the purpose of erecting a public library, and strong rooms for state papers. The sum was granted without opposition.

Holland.—At Valkenburg, between Aken and Maastricht, in Holland, the remains of an ancient camp have just been discovered. The work of excavation is being carried on systematically and with vigour, and has already led to some important results of antiquarian interest. A number of human bones, Roman helmets, swords, and other arms, have already been brought to light. Amongst the articles discovered is a valuable ring of massive gold, ornamented by a large ruby.

Gotha.—The first stone of the new museum was laid on the 9th of July. It is expected that the building will be completed in three years.

FROM SCOTLAND.

Perth.—Her Majesty will inaugurate the colossal statue of the Prince Consort, which is now nearly ready to leave the hands of the sculptor, Mr. William Brodie, R.S.A., Scotland. The statue, which is 9 ft. in height, is carved out of a single block of freestone from Redhall Quarry. It will stand upon a pedestal 13 ft. high, the total elevation being 22 ft. The site is on the North Inch, at the west end of the bridge—one of the most prominent and favourable in the town. The statue represents Prince Albert as attired in the robes of the Order of the Thistle. The right hand, which rests on a square-shaped column or pedestal, holds an open scroll, on which is traced an elevation of the Great Exhibition Building.

Selkirk.—Though for a year or two past no unusual activity has characterized the building trade here, there has been nothing like slackness either. The new bank of the British Linen Company, though somewhat ill situate, being only seen to advantage in front, has improved the appearance of the Market-place. Several of the old-fashioned houses have been taken down and replaced by new and better ones, particularly at the east end of High-street, the Back-row, and in the West Port. Then there are the waterworks for supplying the town with water; and there are to be alterations upon the county jail, estimated to cost about 1,100*l.*; a new burgh school, at a cost of about 600*l.*; and alterations on the parish school, at an expense of 200*l.*

Inverness.—New accommodation has been provided for the volunteer force of Inverness by the completion of the alterations and repairs on part of the old buildings at the citadel with the view of converting them into suitable barracks for the use of the artillery battalion. Many of the stones of which the walls of the building are composed are supposed to have been the last few remaining exposed of the ruins of Cromwell's fort erected on this site in 1652-7, and demolished at the time of the Restoration. The internal arrangements of the building comprise a lofty drill-hall, 62 ft. by 21 ft., and above a large armoury, with reading-room, to be supplied with periodicals for the constant use of the members of the force. Other small rooms are attached for the storing of material, and house accommodation is provided in the building for quartermaster and drill instructor.

Elgin.—The plans for the new court-house, prepared by the Messrs. Reid, architects, Elgin, having been formally approved, a meeting of the county was summoned for the 25th July, for authority to be given to enter into a contract for the construction of the works. The estimated expense is about 6,000*l.* The Treasury, before which the offers have been laid, recommend, that the estimate of Mr. Stewart, of Peterhead, is the one which the Treasury recommend shall be adopted for the whole of the works. Mr. Stewart is completing the Banffshire Lunatic Asylum, and has also the contracts for the Elgin Union Poor-House, and executed the recent additions to the Aberdeen University. The local *Courant* says,—The new buildings are in the Italian style of architecture, and will stand to the east of the present court-house, with its front to High-street. They will also have another front to the east—towards a new street which it is proposed to open up from High-street to Greyfriars'-street, and in a line with the Abbey-street, which will form a direct communication from the County Buildings to both the railway stations. The front of the new building to High-street, to the level of the second floor, will be rusticated ashlar, relieved with mouldings; and immediately above the first plinth, in the central part of the building, there will be a set of eight Ionic pillars, with cornice and full entablature, surmounted by sets of enriched vases. In both sides of this central part of the building the windows are to be furnished with architraves and ornamented capes, having cornices over them corresponding with the cornice of the central part. The front to the proposed new street will be all of dressed ashlar, but plain.

IRELAND.

In Upper Sackville-street, Dublin, extensive wine stores have just been commenced for the Messrs. Gilbey & Son, the front of which, when completed, will be conspicuous. They consist of two dwelling-houses of considerable size, occupying together a width of about 60 ft.: the total depth from front to rear will be about 196 ft. The style of the front is Italian, but of a character in the treatment which is peculiar to the office whence this design emanates, exhibiting great freedom in the treatment of the details. The materials in the front will be picked yellow stocks, with limestone dressings: foliated flat ornament will be introduced on the windows and strings. Mr. W. G. Murray, of Dublin, is the architect. The probable cost is over 4,000*l.*

The Archbishop of Dublin lately consecrated a new church at Greystones, in the county of Wicklow. It is in the Early English style. The means available necessitated plainness of character. It is built of limestone, with open timber work in the roof, which, together with the seating, &c., is stained and varnished. The design was furnished by the architects to the Ecclesiastical Commissioners.

Mr. Dunville, J.P., of Richmond Lodge, county of Down, having lately lost a sister by death, is anxious to raise a tribute to her memory, and has undertaken to allocate the sum of 10,000*l.* towards improving the dwellings of the working classes in Belfast, and otherwise benefiting them both physically and educationally. Houses of a better description than ordinary, and of approved sanitary construction, will be erected, and let at fair average rents. This property will, it is believed, under good management, yield a reasonable rate of interest on the investment, and thereby farther promote the building of improved dwellings for the working classes. The trust fund, and all property connected with it, are to be invested in trustees, who are to purchase land within the extended boundary of Belfast, and to "build thereon, say 60 to 100 houses" of the description mentioned, the annual income from which may be calculated at 500*l.* a year, or upwards. A portion of this income is to be "applied, within the extended boundary of Belfast, to the promotion of the recreation of the working classes of Belfast," by means of athletic and other invigorating exercises, and also for the cultivation of music amongst working men.

The contract has lately been signed for the erection of a coast-guard station at Upper Cove, Kinsale, to accommodate 8 boatmen; having also a chief officer's house, a watch-tower, and a boat-house. The cost is 2,150*l.* The plans, &c., were prepared at the office of public works; Mr. Kenefick, builder.

County Carlow.—A country mansion has lately been completed at Mount Wolseley in this county for Mr. J. W. Wolseley, in the Classic style; and, from the ingenuity of the planning, is attended with an effect exceedingly picturesque. The apartments are of good size and proportion; the decoration of a refined character. The cost is about 6,000*l.* Messrs. Lanyon, Lynn, & Lanyon were the architects. Mr. Faircloth was the builder.

CHURCH BUILDING NEWS.

Little Amwell (Herts).—Since the erection and opening of the little church at Hertford Heath, a new transept has been erected by Mr. H. Norris, at a cost of 200*l.*; and stained glass windows, by Messrs. Hughes & Ward, of London, have been placed in the transept and in the apse. Texts have been inscribed over the chancel arch and in other parts of the building. An organ has been placed in the transept. The organ is of small size, the frame of stained oak, and the pipes gilt. The organ, which cost 150*l.*, is by Mr. G. W. Walker.

Bedford.—At a recent meeting of the restoration committee of St. Paul's Church, it was unanimously resolved to consult Mr. G. E. Street, architect, as to the present security of the tower and spire of the church, and the practicability and advisability of so raising and widening the tower arches as to unite in a proper and stable manner the nave with the chancels.

Boxgrove (Sussex).—The Priory Church is now in course of restoration, under the superintendence of Mr. Scott. Apart from re-seating and warming the church, the task is mainly that of removing deformities and securing stability. The Duke of Richmond, the vicar (Rev. W. B. Burnett), and the parishioners have contributed to the work; but, to effect everything designed, an additional sum is necessary.

Boston.—The preparations for the erection of the new church of St. James, in George-street, have at length commenced. The work, which has been let by tender, has been given to Mr. R. Ranyell, builder. The amount of his tender, which does not include floors and fittings, is 2,616*l.* The other tenders sent in were,—Mr. Sherwin, 2,895*l.*; Mr. Baker, 2,990*l.*; Mr. Whitworth, 3,050*l.*

Hunslet.—On the site of the old church of St. Mary, in Hunslet, but extending much beyond the original boundary, an entirely new edifice has been erected, and was recently consecrated by the Bishop of Ripon. The cost of the new building has been nearly 8,000*l.*, including everything, and all the necessary funds have been provided by Mr. Ingham, of Palermo, and his two sisters, excepting 1,300*l.*, which have been subscribed by parishioners and their friends for the especial purpose of purchasing land to be added to the former site for building a boundary wall, and providing an organ, peal of eight bells, and clock. The church is built of broached sandstone, is in the Geometric style, and consists of chancel, nave, north and south aisles, transepts, south porch, organ chapel at the south side of the chancel, vestry at the north side of the chancel, and tower and spire at the north-west end of the north aisle. The tower is 20 ft. square and 72 ft. high, with spire 84 ft. high; making the entire altitude of tower and spire 156 ft. The tower contains a clock with three dials and a peal of eight bells. The chancel is 31 ft. by 21 ft., and 33 ft. high; nave, 86 ft. by 22 ft., and 48 ft. high to the apex of the roof. It is divided from the aisles and transepts by six arches on each side, supported by clustered shafts, with carved capitals. The north and south aisles are respectively 12 ft. wide and 24 ft. high, and the two transepts are 30 ft. by 26 ft., and 42 ft. high, with double gables, each containing a three-light window with tracery heads. Over the nave arcading rises a clerestory, with a three-light window in each compartment. The east window is of five lights, and the west window of six lights, with elaborate tracery. Both are filled with stained glass, by Messrs. Clayton & Bell, of London. The nave roof is open to the ridge, and formed with curved ribs resting upon hammer-beams, supported by shafts and carved corbels. The chancel roof is boarded under the collar by beams of an hexagonal form, divided into panels by small moulded ribs, and enriched by an embattled cornice. The whole of the roofing is stained and varnished. The pewing is of stained deal. The church floor is laid with encaustic tiles, by Messrs. Minton & Co. The reredos and font are of Caen stone, executed by Messrs. Burstall & Taylor, of Leeds, who have also done the whole of the stone carving. The church is lighted by gas, by twelve coronæ suspended by the roof timbers, these being supplied by Messrs. Peard & Jackson, of London. The church will accommodate 856 persons, 528 free. The building has been erected from the designs of Messrs. Perkin & Backhouse, of Leeds, architects. The organ, which cost about 600*l.*, has been supplied by Messrs. Conacher & Co., of Huddersfield; and the other portion of the work has been executed by the following contractors: Masons' work, Mr. J. Hardwick, Hunslet; joiners' work, Mr. Wm. Britton; slaters' work, Mr. J. Lawson; plumber and glaziers' work, Mr. Thomas Bedford; plasterers' work, Mr. J. P. Mountain; painters' work, Mr. Wm. Nelson; ironfounders' work, Messrs. Singleton & Tennant, Leeds.

Jarrow.—Lady James has offered to take upon herself the restoration of the chancel and tower of the church of Jarrow, an offer which has been accepted. The exertions of the committee will now be confined to the obtaining of funds for the nave—the amount still to be raised being about 1,500*l.*

DISSENTING CHURCH BUILDING NEWS.

Dalston.—The foundation-stone of a new Wesleyan chapel has been laid, in Mayfield-terrace, Dalston, London. The building will include, besides the chapel, a school-room, 13 ft. high and more than 50 ft. square; four good-sized class-rooms for church purposes; a committee-room, and three rooms and offices constituting a chapel-keeper's residence, besides the chamber and fuel-store for the heating apparatus. The chapel will seat altogether 1,277 adults, and will have on the same level a minister's vestry, with dressing-room, &c., attached. The plan comprises a nave with an apsidal projection at each end: that at the back, or east end, is semi-octagonal, and forms the chancel, and that at the front or west end, is semicircular at the end, and contains all the entrances and staircases. Having school and class rooms below, the chapel is necessarily elevated above the street level. The main building is divided into five bays, and the gallery, which is three pews deep, is stopped at the east end with a cant, so as to leave a complete bay on each side of the chancel without any gallery, giving somewhat the effect of a cruciform arrangement, with the gallery sloping at the end of the side aisles, and leaving the transepts open. The design is Gothic of the Early French character, freely treated, and with some elements of the modern eclectic school, rendered in the simplest and most available materials, viz., picked yellow stock brick walling, relieved with bands, arches, &c., in blue Staffordshire, black and yellow malms, Bath stone dressings, with a few sunk columns in red Mansfield. The main building is covered with blue and red Bangor, in bands, and the staircase apse with Witland Abbey slates. The roof is constructed with principals and intermediates, formed with rafters, cross-braces, and iron tie-rods, and king-bolt, with cast heads and shoes, and divided into panels about 6 ft. by 5 ft. by purlins. The chapel, school, and class-rooms can be warmed either together or separately, by hot-water apparatus. The contract, which is inclusive of warming, ventilation, gasfitting, and boundary-walls, has been taken by Messrs. Dove, Brothers, of Islington, at the sum of 4,135*l.* The architects are Messrs. Bassett, Keeling, & Tyrie, of Gray's-inn, whose design was selected in a limited competition with six others.

Worcester.—The Baptist Chapel, in Sansome Walk, has been opened for divine service. The chapel is in the Middle-Pointed style. Its form is that of a cross, and the interior arrangement comprises a nave, aisles, and transept—the pulpit being in the centre of the transept—with a gallery for the choir, and vestries underneath, behind the pulpit in the head of the cross. The aisles are divided from the nave by arcades constructed of slender cast-iron columns, having floriated roof and wood arches. The columns are painted a deep blue, relieved with gilding at the capitals. The roof of the nave is open two-thirds of the way up, the wood arches, which are slight and numerous, coloured dark oak, and contrasting with the white spaces of the roof seen between them. The woodwork throughout is stained dark oak varnished. The windows are glazed with amber-tinted glass; and in the head of the cross, behind the pulpit, there is a four-light double trefoil window of stained glass. Exteriorly the walls are of a dark bluish brown stone, rough on the face, and laid in irregular courses; while all the groins, windows, doors, pinnacles, &c., are of a white Bath stone. At the front, rising from the bay on the left hand, there is a tower and lantern spire, rising to the height of 110 feet. The tower rises with a gentle slope inwards, perfectly plain, and then breaks into an open square lantern, having arched lights and slender shafts, and is surmounted by a tapered spire finished with a gilded metal finial or vane. There is a considerable amount of ornament, carved in stone, about the spire, the great front window, and over the buttresses; and the building, with the ground on which it stands, is enclosed by a low stone wall, with pillars, and in the intermediate spaces an iron railing. The site is in an open locality close by the pleasure grounds. The chapel is seated to accommodate 800; and galleries can be added along the sides of the nave without interfering with the design. The plans were by Messrs. Prichett & Son, of Darlington; and the building has been erected by Messrs. Wood & Son, under the superintendence of Mr. Johnson, of this city. On the vacant space of ground at the back it is intended hereafter to erect schools.

Montgomery.—The plans for the new Wesleyan chapel here, we understand, were prepared by Mr. W. H. Spaull, architect, of Oswestry.

STAINED GLASS.

Llanymawddwy Church (Merionethshire).—A stained-glass window has been set up in the chancel of this little church. The figures are, the Saviour, with the Agnus Dei; St. Tydecho, the founder of the church; and St. David, the patron saint of Wales. The inhabitants are indebted for this to Mr. E. Buckley, of Bryn and Plas Dinas, Baron of the Lordships of Mawddwy. Mr. Buckley had previously contributed largely towards the restoration of the church.

York Guildhall.—Shortly after the death of Mr. Ald. Meek, the City Council resolved that a subscription memorial window to the deceased should be placed above the Sessions Court in the Guildhall, to supersede the stained glass window there situate and designed by Gyles, a citizen of York. A design for the new window was prepared by Mr. F. Bell, of York, architect, and the tender of Messrs. Hardman & Co., Birmingham, was accepted for the execution of the work. The new window has now been put in. The stained glass of the old window will be shortly placed in one of the side windows of the Guildhall. The stone-work of the old window was in a very dilapidated state, and new mullions and tracery were fixed before putting in the glass. The fact prominently represented is the granting of the charter by Richard II. on the 18th day of May, 1396, and in the 19th year of his reign. By this charter his Majesty confirmed all the former charters, rights, and privileges of the city, and formed the city into a county by itself. The centre light of the window contains a full-length figure of Richard II., his left hand resting on the mace, "which he had before given to the Mayor," to use the words of Torr. On the right hand of Richard II. is William de Selby, who was Mayor for the third time in 1388-89, and was the first Lord Mayor. He is represented as having just received the sword. On the King's left is the figure of Sir William Frost, knight, who was the Lord Mayor in 1396-97, when the great charter of the city was granted; and is represented as just having had the document presented to him. The extreme right and left lights of the window have figures of the first two city sheriffs, namely, John More and Thomas Howden, and are holding books to indicate the law. All the figures are represented in the costume of the period of Richard II., in their gowns of office, and with beards and hair as worn at that time. They are placed under canopies, and on diapers of the same period as the architecture of the Guildhall. In the tracery are the arms of Richard II., with the crown, crest, cypher, cognizance, and supporters; the arms of the city of York, backed by the sword and mace, and surmounted by the Spanish hat; and the city arms as before impaled with those of the late Alderman Meek as Lord Mayor. The lower part of the window is filled in with the arms of five of the witnesses to the charter.

St. Peter's, Newcastle.—This place of worship has received another stained glass window, executed by Messrs. Hardman, of Birmingham. The window is a memorial one, and the subject introduced is "Christ Blessing little Children." The window has been erected by Mr. M. C. Woods, in memory of his little boy, and fitted up by Messrs. Lawson & Sons, of Newcastle.

Berwick Parish Church.—An addition is about to be made to the number of stained glass windows by the churchwardens, who find that the funds, aided by a subscription amongst themselves, will allow of the renewal of the window on the west side of the south door. The work will be done in a plain style, and it has been entrusted to Mr. Ballantyne, of Edinburgh.

THE BUILDING TRADES' MOVEMENT.

Manchester.—The carpenters and joiners at Manchester have given the employers notice for an advance of wages.

Darlington. — The bricklayers' labourers of Darlington have given notice to their respective employers that on and after August 1st, they demand a rise of 1s. per week in their wages. They have hitherto been paid at the rate of 20s. per week.

Paisley.—There is a strike among the masons at Paisley. The only difference is as to whether the men should go to the masters to receive their pay or the masters should go to them at their work. Their demand for an advance had been conceded.

COMPETITIONS.

Chester Town Hall.—At a special meeting of the town council, and on the recommendation of the committee, the premium of 100*l.* was awarded to the author of the design marked "Love's Labour;" and the premium of 50*l.* to the author of the design marked "Deva," as suggested by Mr. Digby Wyatt, provided the authors could guarantee that their designs could be adopted for the sum named by the council (16,000*l.*), or thereabouts. On opening the letters accompanying the designs, it was found that the author of "Love's Labour" was Mr. W. H. Lynn, Belfast; and of "Deva," Mr. E. H. Heffa, of Liverpool.

Walsall.—The mayor and corporation have lately printed and issued conditions to be observed by architects sending in designs for a town hall and gaol, from which precious document I extract two paragraphs:—

1st. "The council will not be bound to adopt either of the designs to which premiums shall be awarded, nor any other design; nor to employ the competitor to whom either of the premiums shall be awarded; but the premiated designs shall become the absolute property of the council, who may make use of them as they shall think fit."

2nd. "The designs, including full and detailed specification, must be delivered at the office of the town clerk," &c.

This plainly speaks for itself; and I have only to add that the premiums offered are not 500*l.* and 300*l.*, but 50*l.* and 30*l.*

AN ARCHITECT,
who will not trust himself to the justice of the worthy Mayor and Corporation of Walsall.

Books Received.

VARIORUM.

"Holiday Papers. By Harry Jones, M.A. London: Hardwicke, 1864." Some of these popularly-written papers, by the incumbent of St. Luke's, Soho, appeared in *Chambers's Journal*, *Once a Week*, and the *Leisure Hour*. They are both amusing and instructive. Not a few of them are on subjects in natural history, such as on "Our Feathered Visitants," on "Bird-murder," "Larks," "Rooks," "Starlings;" on "Dogs I have Known," &c. There is a great variety, however, of subjects, such as "Dreams," "Association," "Sight-seeing," "Nursing," "Sea-side Life," "Mobs," &c. In one on "The Language of Flowers," the silly affectation of ultra-learned names is thus justly and ably ridiculed:—"Can you picture to yourself a man going a-wooing with a 'Delphinium Doukekerii' in his button-hole? Don't you think snapdragon hardly an august enough translation of 'Antirrhinum Caryophylloides'? No humble bee would venture to show its nose in an 'Indigofera-coccinea endecaphylla;' and I should like you to tell me, off hand, what a 'Guiterezia gymnospermoides' smells like, or a 'cucumus aradac.'"——"Letter to W. P. Andrews, Esq., Chairman of the Euphrates Valley Railway, on the Importance and Necessity of the Establishment of the Euphrates Route. By Captain W. B. Selby. London: Allen & Co." The very important subject of the Euphrates Valley route to and from India is ably treated of in this pamphlet, which no one, we should think, can read without being convinced of its great advantages over the old route by the Red Sea. Politically as well as commercially the scheme is a most desirable one; and the Government are fully alive to its advantages. Had such a route existed during the Crimean war and during the Indian rebellion it would have greatly aided our military power; and in a commercial view the cotton famine would have been considerably mitigated by it. The commercial advantages to Persia and Turkey also, as well as to India and this country, would be great and mutual by the opening of such a route. The Arabs, it appears, are favourably inclined to it as an English project, though they would oppose it were it Turkish in its origin.

Miscellanea.

THE ADMIRALTY.—We understand that Colonel Godfrey Thomas Greene, Director of Engineering and Architectural Works at the Admiralty, has resigned the appointment which he has held for many years.

DESTRUCTION OF A LONDON CHURCH.—The parish church of St. Clement Eastcheap, situate in St. Clement's-lane, King William-street, is to be destroyed, an arrangement having been made under the Union of City Benefices Act, and with the sanction of the Bishop of London, for uniting the parish with that of St. Mary Abchurch.

THE LUDGATE-HILL VIADUCT.—An accident has taken place on Ludgate-hill. Several workmen were engaged in raising one of the iron girders, when unfortunately the chain broke, and the girder fell. Several of the workmen sustained severe, and, in one or two cases, it is feared, mortal injuries.

PROPOSED PUBLIC PARK FOR HANLEY.—At a public meeting, called by the mayor on a requisition of upwards of 800 of the inhabitants, for the purpose of considering this subject, appropriate resolutions have been passed promotive of the formation of a public park, and requesting the town council to obtain ground for the purpose. The sum contemplated as requisite is about 8,000*l.*

ALBERT MEMORIAL AT LICENSED VICTUALLERS' ASYLUM.—The memorial statue of the late Prince Consort in the grounds of the Licensed Victuallers' Asylum, Old Kent-road, will be inaugurated on the 9th instant by the Prince of Wales. The figure is of Carrara marble, and is upwards of 8 ft. high, the pedestal on which it rests being a block of Sicilian marble, the weight of which is ten tons, and its height a little over 6 ft.; the whole standing upon a granite base of 1½ ft. in thickness. The Memorial itself is, consequently, little short of 16 ft. in height. His Royal Highness is represented in the costume in which he appeared when laying the foundation stone of the Albert Wing: one hand is resting on a part of a Corinthian column: the other holds a scroll. The whole was designed and executed by Mr. Thomas Earle, of Brompton, at a cost of between 600 and 700 guineas.

THE PRINCESS'S THEATRE.—Some very remarkable scenery has been prepared by Mr. F. Lloyds, for "The Streets of London," a sensational melodrama, arranged by Mr. Boucicault, which has been produced at this theatre with great success; notably a view of Charing-cross, after a fall of snow, including St. Martin's Church, Northumberland House, Parliament-street, and the gaslamps, all built up and painted in the most effective and clever manner. Cabs pass and repass at a distance. The usual frequenters of the streets in the evening give additional force to the deception. Of its kind it is one of the best things that has been done, and the same must be said of the representation of a house on fire, which closes the second act. These scenes alone should draw visitors for a long time to come; moreover, the piece is very interesting, and Mr. G. Vining acts with unflagging vigour.

THE OPENING OF HAMILTON-PLACE.—With reference to this subject, noticed in our last, a correspondence has been issued in the form of a return to the House of Commons, from which it appears that the Metropolitan Board of Works, in stating their opinion in a letter to the Chief Commissioner of Works, that the opening up of Hamilton-place into Park-lane would afford the readiest and most economical means of relieving that thoroughfare, remark that inasmuch as the proposition would affect property almost exclusively belonging to the Crown, it is one which can only be effectively carried out by the executive of her Majesty's Government. In reply, Mr. Cowper assures the Board that he desires to assist them so far as he can in any project they may adopt for remedying the evil; but reminds them of the inadequacy of Hamilton-place to receive the great and increasing traffic which encumbers Park-lane. In conclusion, the secretary says,—"If the Metropolitan Board should, on consideration, be of opinion that other alterations do not afford greater advantages than the prolongation of Hamilton-place, the First Commissioner would request to be informed, before entering further into the subject, whether the Board propose to take upon themselves the expense of the proposed improvement."

THE HOTEL MOVEMENT.—The half-yearly report of the Westminster Palace Hotel Company shows an available balance of 7,057*l.* 17s. 2d., out of which a dividend at the rate of 8 per cent. per annum has been declared, leaving a balance of 1,857*l.* 17s. 2d. to the new account.

RIPON CATHEDRAL: DAMAGE BY THE WIND.—About two-thirds of the temporary screen erected at the west-end of the nave has been blown down. The accident was caused by the glass being out of the whole of the lower and two of the upper windows of the western front, which is now under repair.

NIGHT-CLASSES FOR DRAWING AT SOUTH KENSINGTON.—A minute of the Lords of Committee of Council on Education, drawn up in consequence of the report of the select committee of the House of Commons, promises an inquiry into the feasibility of establishing night-classes at South Kensington to teach drawing to persons who cannot attend established schools of art.

THE SARCOPHAGUS IN SOANE'S MUSEUM.—Mr. Bonomi has completed his drawings of the sarcophagus, and the work will be published immediately. The sarcophagus has been in the museum forty years, and now, for the first time, the curious writings on its sides and floor will be given to the world. We may then expect they will soon be deciphered by continental students or our own.

NEARLY TWO MILES OF FIRE.—A short time since a portion of the furze growing on Keston Common, in Kent, was wilfully set on fire, and it continued to burn in patches; but the recent high wind fanned the smouldering fires into other portions of the common, until at length the flames covered an area of nearly two miles. It was apprehended it might extend to the Fox Tavern, and also to some dwelling houses. One hundred men have therefore been employed to cut trenches, so as to prevent any further extension of the mischief.

THE SCHOOLS OF ART QUESTION. — At the interview which the deputation of managers and masters of schools of art had with Earl Granville, referred to in our last number, Earl Granville said that the system of payments on results must remain in force until the end of the financial year, as it would be impossible to introduce alterations until the next session of parliament—since the estimates for the present year had been based upon the system now in force.

NON-LIABILITY FOR STOPPING WATERCOURSE.—In the case of Roberts *v.* Rose the plaintiffs had obtained leave from the occupier and agent of the owner of certain land to make a watercourse over it. The owner subsequently leased the land to the defendant, who, as well as the agent of the owner, gave the plaintiffs notice to discontinue the watercourse. On their refusal the defendant stopped it at the place where it left the plaintiffs' premises, and it came upon the land of the occupier, and so caused damage. It was held by the Court of Exchequer, firstly, that the lease was a revocation of the licence; secondly, that the defendant was right in stopping it where he did, as the plaintiffs had failed to show that it could have been stopped elsewhere with less damage to themselves, to the defendant and the occupier, or any third person.

GOVERNMENT SCHOOL OF SCIENCE, CHESTER AND CREWE.—The students, under the care of Mr. Ellis A. Davidson, at the Chester and Crewe Science School, which has been recently grafted on the local school of art, have again been very successful in the science examinations, held in May last. In the subject of plane and solid geometry, fourteen schools of science have competed throughout the kingdom, and between them have achieved 246 successes, or an average of about 17½ each, whilst Chester takes thirty-three. Thirty-six students were presented from the Chester and Crewe schools, and thirty-three have been successful, thus contributing only three to the sixty-six failures which have taken place amongst the entire number of schools. Again, in mechanical and machine drawing, 154 successes are divided amongst twelve schools, or about 12⅞ each, whilst Chester and Crewe take twenty-two successes. In building construction, four first-class prizes have been given throughout the United Kingdom, and of these Chester takes two. There have been two second-class, and Chester takes one of these: there have been thirteen third-class, and Chester and Crewe take three of them. Besides these, Chester and Crewe also take prizes for animal physiology and zoology.

Railway Traffic Returns.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 16th of July, on 11,335 miles, to 689,597*l.*, and for the corresponding week of last year, on 10,921 miles, to 617,677*l.*, showing an increase of 414 miles, and of 71,920*l.* in the receipts.

Fall of Cupola, Russia.—The recently-erected cupola of the Church of the Transfiguration of St. Petersburgh came down on the 18th ult. with a terrific crash. The loss of life would have been comparatively limited had not crowds of townspeople forced an entrance into the edifice beyond all control from the police or military in immediate attendance. The concussion created by the falling dome in a short time brought down the whole structure, overwhelming several hundreds in the ruin.

Progress of the Wesleyans.—At the recent conference in Bradford, it was stated that during the past eleven years nearly 59,000 members have been added to the societies, after filling up the vacancies occasioned by death and other causes. About 580 new chapels and 250 new schools have been built, at a cost of 746,000*l.*, and nearly 470,000*l.* of chapel debts liquidated. More than a million and a quarter of money has been raised for Foreign Missions, and the Home Missions have an increased annual income of 6,000*l.* The Theological Institutions have received augmented support, and more than 400 young men have been ordained to the work of the ministry.

Clifton Suspension Bridge.—The bridge, it is expected, will be open for traffic early in October. The foundation stone of the structure was laid on the 27th of August, 1836, by the Marquis of Northampton, as president, on the occasion of the meeting, in Bristol, of the British Association for the Advancement of Science. This year the association holds its meeting at Bath, in September, under the presidency of Sir Charles Lyell; and it would be an interesting addition to the proceedings of that body if the bridge could be opened under its auspices in 1864. Great progress is being made with the roadway. The framework of the bridge is being painted, and a portion of the railings for each side of the footpaths is in hand. The road leading to the bridge on the Leigh or Somersetshire side is finished, and that on the Clifton side is in a forward state.

St. Martin's-in-the-Fields.—The principal transaction preserved of Dr. Lloyd, as rector of this now densely populated parish of St. Martin's-in-the-Fields, was his negotiation with Richard Baxter for his meeting-house. Some curious traits of the times are revealed by it. Oxenden-street was then building; and Richard Baxter erected there a place of worship for the use of his sect, but found the speculation disastrous, for Mr. Secretary Coventry instigated the guards of Charles II. to come under the windows and flourish their trumpets and beat their drums whenever Richard preached. Finding that not a word he said could be heard, and that remonstrating with these gentry was dangerous, Baxter sought to dispose of the building. Dr. Lloyd kindly introduced the affair to the vestry of St. Martin's. By his mediation poor Baxter obtained the handsome rental of 40*l.* per annum for the building from the vestry, and it was forthwith consecrated as a "Tabernacle" to St. Martin's-in-the-Fields.—*Churchman's Family Magazine.*

Public Improvements in Preston.—At a recent meeting of the Preston town council, a motion was made to the effect that application be made to the Poor-law Board for an order authorising a further advance of the sum of 15,000*l.* under the Public Works Act. During the discussion which ensued, the town clerk stated that in August last year the corporation got authority to borrow 28,500*l.* The sum of 10,000*l.* was to be advanced at the date of the order, to be followed by further sums when needed. The 10,000*l.* named had been expended in block paving, flagging, improvements at the Ribble side, and alterations of corporate property. Relative to private improvement expenses, he observed that by an order dated 24th October, 1863, power was given to the corporation to borrow 19,739*l.* The order in connexion with this authorised an advance of 5,000*l.*, with the remainder to follow. The sum of 5,000*l.* had already been expended, and now it was thought desirable to ask for 3,000*l.* more. The council agreed to borrow the 15,000*l.* alluded to.

Chapel Royal, Savoy.—A correspondent suggests, that an opportunity is now afforded of bringing the Chapel Royal, Savoy, into public notice, by *not* rebuilding the house in the Strand, which was destroyed, but leaving an open space, and placing a flight of steps the whole width of the chapel, with an iron railing in the Strand, and a central gate.

The Materials of the Brighton Hotel.—Before the first brick was laid, 11,500 yards of excavation had to be carted away. There are 800 rods of brickwork, or 3,500,000 bricks; 12,500 cubic feet of York and Portland stone; 450 tons of wrought and cast-iron; 470 loads or 23,500 cubic feet of timber; 30 miles of flooring; an acre and a half of Minton's glazed tiles; a quarter of an acre of encaustic tiles; an acre of sheet and half an acre of British plate glass; 15 miles of paper-hanging; 13½ miles of bordering; 6 miles of gas piping; 12 miles of bell-wire, and 5 miles of tubing, in the building. In the hotel proper there are 260 rooms, containing 230 marble chimney pieces, and from the top to the bottom of the grand staircase there are 128 steps.

So much per Acre, how much per Yard? Divide the *pounds* per acre by twenty and the answer will be the price per yard in *pence, plus* one-tenth of a penny per each shilling; and similarly to find the price per acre, multiply the *pence* per yard (adding one-tenth of a penny for each shilling) by twenty, and the answer is the price per acre in pounds. Ex.—1,815*l.* per acre÷20 gives 90 pence per yard. The use of the above formula is when a quick answer is required, as in a sale room or otherwise, where the fractions may be disregarded, only bearing in mind on which side they lie. It arises from the accidental circumstance that the number of yards in an acre is within forty of the number of pence in a pound multiplied by twenty.—W. I.

Robin Hood.—At the Nottingham meeting of the Lincoln Diocesan Architectural Society, among the proceedings subsequent to our notice of last week, an interesting and curious paper by Mr. Planché, Rouge Croix, College of Arms, entitled "A Ramble with Robin Hood," concluded the proceedings in the Exchange Hall. Mr. Planché said he had pleasure in avowing himself a believer in Robin Hood, without holding "each strange tale" of that famous forester to be "devoutly true," or being fortunate enough to discover any very important fact in support of his opinion. He had satisfied himself that the objections of the dissenters are in no instance fatal, and that in many cases they were met by very singular circumstantial evidence. A good deal of this evidence Mr. Planché then went into; and in course of which he adduced the remarkable fact of the existence of a Robert Fitzooth, or Fitz Odo, of Loxley, in the reign of the second Henry. Indeed there was indisputable evidence, he remarked, of two Robert Fitz Odos or Fitzooths living in the twelfth and thirteenth centuries, the former of whom certainly, and the latter most probably, was lord of the manor of Loxley.

The Lenoir Gas Engine: "Steam superseded."—The engine invented by M. Lenoir, of Paris, under the auspices of the Imperial Gas Company of that city, and now in extensive use there, has been introduced into America, as appears from the *American Gas-Light Journal*, which thus describes it:—The Lenoir engine is in appearance and style very much like a horizontal steam-engine, having a cylinder, piston, crank-shaft, and fly wheel. The cylinder has the necessary slide arrangements for the admission of the gas (the ordinary city coal-gas, supplied from the service-pipes) and atmospheric air, in due proportions: the gas is ignited at the proper moment by the electric spark from a battery connected by wires to each end of the cylinder the connexion being made and detached by the rotary action of the crank-shaft. The expansive force consequent on the ignition, gives motion to the piston on each side alternately. The cylinder has a water-jacket surrounding it, through which a stream of water is kept gradually flowing, to keep it cool. The engine, once fixed, the battery charged, and the gas turned on, it is ready for action at any desired moment, needing no engineer to superintend its working; and as soon as the work required of it is completed, and the gas shut off, the engine instantly stops, and the expense ceases. The daily cost of gas and chemicals is trifling, and there is no boiler and no chimney. It can be worked on any floor of a house, and almost under any circumstances.

Selsey: Pulling down the Oldest Church in the South of England.—It having been agreed at a vestry meeting, by the consent of about six of the ratepayers, that the old church of Selsey should be pulled down, and a new one built near the village, the following remarks are made by one of the inhabitants:—On the site where the church now stands was a place where the ancient Britons performed their religious worship, as witness the mount. On the south eastern corner of the churchyard the Romans built their church, as witness old foundations if you dig below the surface. In England Christianity was first preached at Selsey, probably on the very site where the church now stands, and tradition says that one of the twelve apostles preached at Selsey. The site is one where religious service has been performed most probably for upwards of 2,000 years: can it be possible for the present generation to remove it! The church is the oldest church in the south of England, if not in England, and a few years since was put in good repair: at a trifling expense it would now last for ages.

Smoke-consuming Apparatus for Heating and Ventilating.—Lewal's patent apparatus for warming and ventilating large public and other buildings consists of a cold and warm air chamber, a coal and gas receptacle, a tank for water, and a number of tubes, and is placed in a brick chamber, which can be erected in the basement. The principal improvements claimed for this apparatus are,—that the smoke and gas generated by the combustion of the fuel are entirely consumed, thus increasing the heating powers of the apparatus without causing any additional consumption of fuel;—that no smoke being admitted into the chimney or flue, it is only required to cause the necessary draught of air to pass through the fire to promote combustion;—that by the constant passing through the apparatus of large quantities of pure warm atmospheric air into the building, a more healthy and better atmosphere is obtained;—that the apparatus being entirely surrounded by air the whole of the heat generated by the fire is absorbed in its passages through the pipes;—that the portion of the apparatus in which the heat is generated being surrounded by a jacket the space between being filled with air supplied from the ashpit, the air passing into the building does not come in contact with red-hot surfaces;—that by having in the interior of the apparatus a tank containing water, which becomes heated and gives off a small quantity of steam, the hot air absorbs it, and has thus restored to it the moisture of which it has been deprived in the course of heating. The apparatus has been erected in the new Congregational church of Pilgrim Fathers, in Buckenham-square, New Kent-road, Southwark.

TENDERS.

For residence, at Topsham, Devon, for Mr. E. H. Penny. Mr. W. F. Cross, architect:—

Kenshole	£2,414	0	0
Mauley	2,397	0	0
Periam	1,542	0	0

For City Offices, Clement's-lane. Messrs. F. & H. Francis, architects:—

Higgs*	£20,967	0	0
Patman & Fotheringham*	20,613	0	0
Hill & Keddell	20,350	0	0
Mansfield & Sons*	20,300	0	0
Lawrence	19,722	0	0
Colls & Co.	19,474	0	0
Myers & Sons (accepted)	19,275	0	0
Hill & Sons†	17,600	0	0

* These tenders not delivered in time.
† This tender subsequently withdrawn.

For two semi-detached houses, at Barnet. Mr. T. W. Goodman, architect:—

Cushing	£1,100	0	0
Wood	1,050	0	0
Pocock	1,047	0	0
Stephenson	1,025	0	0
Peskett	997	10	0
Marshall	991	5	0
Hardman	985	10	0

KELLY'S PRACTICAL BUILDERS PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of eminence, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts. Royal 8vo. price 8s. neatly bound.

London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Editions in Quarto of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING, Revised by TREDGOLD: being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten Parts at 2s. or in boards, 20s.; containing upwards of 120 Steel Plates, and numerous Woodcut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the Use of Workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c. &c.; and a description of the various materials employed. Ten Parts at 2s. or in boards, 20s.; containing upwards of Ninety Steel Plates and Numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE: containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE: containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with Direction for Building, and the estimated Cost of each Edifice. Twelve parts at 2s.; or in boards, 28s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other buildings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts, at 2s. or 32s. boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE: containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By H. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 2s.; or in boards, 23s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colours, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. HIGGINS, Esq. Accompanied by actual Specimens of Hand Brush Graining and Marbling. Ten Parts, at 3s.; or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HEBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1825, of the Encyclopædia. The Inventions and discoveries recently made have engaged the sedulous attention of the Editor; for, as the value of each was tested by experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo volumes, cloth lettered, price 30s.

Early in July,

PRIZE POEMS receiving the 100 Guineas offered in the Advertisements, "Ho! for a Shakspeare," and awarded by Messrs. Webster, J. Stirling Coyne, Andrew Halliday, George Rose, and Thomas S. Stuart. London: LONGMAN, GREEN, & CO. Paternoster-row.

BUILDER'S PRICE BOOK, LATEST AND BEST.

Now ready, 12mo strongly bound in cloth, price 4s. (postage 4d.),

THE BUILDER'S and CONTRACTOR'S PRICE BOOK (Lockwood's formerly Weale's) for 1864, revised by G. R. BURNELL, Esq. C.E. This book is the universally recognised arbitrator in the settlement of disputed accounts. Not being printed from stereotype plates year after year, as is the case with other books of the kind, errors are not perpetuated, and the opportunity is taken in every reprint to introduce current prices and other desirable improvements.

London: LOCKWOOD & CO. 7, Stationers'-hall-court, E.C.

THE ART-JOURNAL for AUGUST (price 2s. 6d.) contains three Line Engravings, viz.—"Temptation of Andrew Marvell," by J. Stansfield, after C. Landseer, R.A.; "Approach to Venice," by J. C. Armytage, after J. M. W. Turner; "A Spanish Boy," by A. Blanchard, after Murillo. The literary contributions include:—"Wedgwood and Etruria," by L. Jewitt, F.S.A. illustrated; "National Gallery and Royal Academy;" "British Artists: William James Grant," by James Dafforne, illustrated; "Almanac of the Month," illustrated, "Art-Work in August," by Rev. J. G. Wood, M.A.; "History of Caricature," by T. Wright, illustrated; "The Exhibition in Dublin;" "Chateaubriand's 'Atala,'" illustrated; "A Decorated Church in Ireland;" "Portrait Painting in England," by Peter Cunningham, F.S.A.; "The Oil Wells of America," by Professor Archer, illustrated; "The Art-Workman's Position," &c. &c.

London: JAMES S. VIRTUE, 26, Ivy-lane.

Russia, gilt edges, price 6s. (postage 4d.)

THE ENGINEER'S, ARCHITECT'S, and CONTRACTOR'S POCKET-BOOK (Lockwood & Co.'s, formerly Weale's) for the Year 1864.

"Another edition of this old acquaintance has just been issued, and fully merits the estimation in which it has been held for many years. There is much new matter introduced, and the work has been carefully corrected up to the day of publication. It is one of the most valuable books of its class. We strongly recommend it."—*Civil Engineer and Architect's Journal*.

"There is no work published by or without authority, for the use of scientific branches of the service, which contains anything like the amount of admirably arranged, reliable, and useful information. It is really a most solid, substantial, and excellent work; and not a page can be opened by a man of ordinary intelligence which will not satisfy him that this praise is amply deserved."—*Army and Navy Gazette*.

London: LOCKWOOD & CO. 7, Stationers'-hall-court, E.C.

Now ready, imperial 8vo cloth, 25s.

A PRACTICAL COURSE of MILITARY SURVEYING, including the Principles of Topographical Drawing, &c. Illustrated with 21 Plates and 100 Woodcuts.

By CAPTAIN LENDY, F.G.S. F.L.S.

With an Appendix by COLONEL SCOTT.

London: ATCHLEY & CO. Publishers of Engineering and Architectural Works, 106, Great Russell-street, Bedford-square, W.C.

A New Work,

BOROUGH of LIVERPOOL.—To ARCHITECTS and SURVEYORS.—The Town Council of the Borough of Liverpool desire to engage the services of a competent person to act as SURVEYOR of their Estate, and as ARCHITECT in the erection of any buildings required by them. An outline of the principal duties required will be forwarded on written application, addressed to the Town Clerk, Town Hall, Liverpool. The gentleman appointed must be experienced in his profession, and not more than forty years of age, and he will be required to abstain from all private practice, and to devote his whole time and attention to the business of the Corporation. The salary will be 300l. per annum; and suitable offices, with a competent staff of clerks, and all stationery, &c. will be provided by the Town Council. Applications, with testimonials, if any, and marked "Application for Office of Surveyor," and addressed to "The Chairman of the Real Estate Sub-committee, Town Hall, Liverpool," will be received at the Office of the Town Clerk of Liverpool, up to ONE o'clock on THURSDAY, the 11th day of AUGUST next, but not later. Each applicant must give full particulars of the present and previous employment of the applicant, and state how soon, if appointed, he could enter upon the duties of the office. No recommendation of any applicant will be taken into consideration unless it be stated therein that the writer is personally acquainted with the individual recommended, and that such writer can, of his own knowledge answer for the qualifications of the applicant. If the applicant, or any person recommending him, is not resident in Liverpool, a reference to a person of respectability and standing in Liverpool, who is acquainted with the applicant or person so recommending, as the case may be, will be required. It is requested that no personal or written application may be made to any member of the Council in reference to this appointment. The gentleman appointed will have the benefit of conferring and advising, and will be expected to co-operate with the present Surveyor of the Corporation, who will continue his services as Consulting Surveyor.—

By order, WM. SHUTTLEWORTH, Town Clerk.

Town Hall, Liverpool, July 15, 1864.

JOHN DOWNEY, Victoria Wharf, Nine Elms, S.
Also Licensed Lighterman, of 11, Millbank row, S.W.; and Licensed Lighterman and Wharfinger, of Hermitage Steam Wharf, Wapping, E.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 25 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

NEW STOCK NOW READY.
FINE WHITE BRICKS.
BEST RED BRICKS.
White, Black, and Red Cutters. Also a large assortment of FANCY MOULDED BRICKS & GARDEN EDGINGS, Plain and Ornamental ROOFING and RIDGE TILES, Delivered to Vessels in the Dock alongside the Kilns, in the River Medina.

IMPORTANT TO BUILDERS.
GREEN'S PREPARED ASPHALTE, for check damp cellars, &c. price 40s. per ton, on Midland or London and North Western Railway, Bedford.—Address DANIEL GREEN, Bedford. List of Prizes for Green's Asphalte Floors forwarded by post.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Tallotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

Temporary Offices—12, Charing-cross, W.C.

It is an admitted fact that, notwithstanding the constant endeavour on the part of the Metropolitan Water Companies to render their supply as pure as possible, impurities still exist, and especially in the summer months, as proved by the analysis of Dr. Robert Dundas Thomson, F.R.S. periodically published: and no engineering skill has hitherto been found to prevent the water acquiring fresh taint on its long passage through the mains and pipes, and from the stagnation and accumulation of filth in the cisterns.

The attention of the General Board of Health, and that of the public, has continually and for a long time past been directed to such impurity of the water supply. Edwin Lankester, esq. M.D. Henry Letheby, esq. M.D. R. D. Thomson, esq. M.D. and other sanitary authorities, have urged the necessity of improvement. Parliament has passed laws and regulations for the purpose, and the London water companies have spared neither money nor engineering skill to accomplish the object. It is, however, remarkable that no effectual remedy has heretofore been suggested. Upon the adoption of that proposed by the Company the patentee has been favoured by numerous testimonials, which can be inspected at the Offices of the Company. The space of a prospectus alone allows the following, dated 23rd September, 1863, from Arthur Hill Hassall, esq. M.D. to be given in extenso:—

"What I anticipated in the year 1850 has since been accomplished in the apparatus constructed by Mr. Danchell, which possesses besides several great advantages, which render it particularly practical and fit for general application. These advantages are:—

1. That the water is filtered at the last moment when required for use, and therefore not liable to acquire fresh taint by standing, as is the case with the usual methods of filtration.

2. That, filtering direct from the water of the cistern, any quantity of filtered water may be drawn, either for drinking, cooking, or other purposes, while in the common filters we are limited to the quantity poured into them from time to time.

3. That no attention to the apparatus is required on the part of servants in refilling or cleansing.

Having had one of these apparatus in daily use for a considerable period, I can testify with confidence to the advantages it affords.

If these filters be supplied on somewhat similar terms to those on which gas-meters are furnished, the patentee undertaking to keep them in working order, I cannot help thinking that householders and those who appreciate the luxury of pure water, and are at all aware of its importance to health, will gladly avail themselves of the advantages they undoubtedly afford."

The Company has been formed to purchase of Mr. F. H. Danchell the patent of his filter and softening apparatus for purifying water direct from the cistern and to carry out the suggestion of Dr. Hassall and other sanitary authorities. An apparatus will thus be placed in the cistern through which the water has to pass when being drawn. It will yield the water pure, limpid, and free from colour and taste; it will arrest the impurities in mechanical suspension, and deprive the water of all organic contamination and metallic oxides in solution. The apparatus will require no attention by those who use it; it will be fixed by the Company; and, as no filter can continue for a lengthened period to perform its duty without becoming clogged or foul, it will be periodically cleansed and otherwise kept in working order by the Company.

The charge to each householder will vary, according to the quantity of water requiring purification, from 5s. to 1l. 10s. paid annually in advance, beyond which no other expense will be incurred. The larger apparatus required for clubs, brewing, washing, hotels, schools, hospitals, barracks, workhouses, prisons, ice companies, and other large establishments at home and abroad, will be supplied upon terms to be agreed upon.

It should be remarked that the filtering and softening apparatus can be beneficially employed in the naval service and for steam boilers, particularly for those of river and canal steam-boats, and locomotive and portable engines, and as a prevention to disastrous explosions so frequently occurring. Portable filters of all sizes for household and other purposes will be provided upon the same principle.

No outlay is required to be invested in premises, machines, plant, or tools; so that the capital will remain as strictly working capital, which will be called for only as the operations of the Company require it. Careful estimates have been made, showing a highly remunerative percentage to the shareholders, and which can be inspected at the Company's offices.

Prospectuses may be had, and application for shares may be made to the bankers, brokers, solicitor, or secretary, at the offices of the Company. Applications from the country may be made by crossed cheques or post-office order, payable to the bankers, and addressed to the offices of the Company.

INTERNATIONAL FINANCIAL SOCIETY (Limited), 69, Threadneedle-street, London, E.C.

BOARD OF DIRECTORS.
Robert Benson, esq. (Messrs. Robert Benson & Co.)
John F. Flemmich, esq. (Messrs. Frederick Huth & Co.)

PORTLAND CEMENT WORKS,

NORTHFLEET, KENT.
ROBINS & CO.

To whom the Prize Medal was awarded in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all purposes to which cement is applicable.—Orders received at Great Scotland-yard, Whitehall, and at the Works.

HYDRAULIC LIME and ROMAN

CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, colliers, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (ground), or ground, and in barrels and bags. The Limestone can be had in full cargoes; also their Cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to E. & W. AARON, Agents, 66, South John-street, Liverpool.

, Specimens of CREEKE'S PATENT PIPES may be seen at the Architectural Exhibition, 6, Conduit-street, Regent-street, W.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London Atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two, or three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will rigly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

NOTICE TO ARCHITECTS AND THE TRADE.

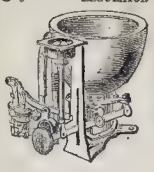
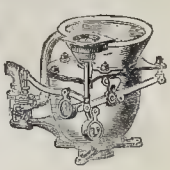
DOULTON'S PATENT OPERCULAR PIPES.



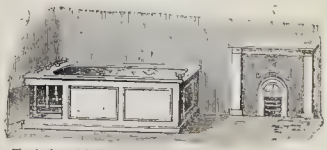
By the introduction of one of these Pipes, at intervals, with ordinary Socket Pipes, Drains can be examined and cleansed. The Cover, being fired in one piece with the Pipe, fits perfectly. There are no imperfect joints, or complication of parts.



Manufactured by HENRY DOULTON & CO. LAMBETH.

MANUFACTORIES—LAMBETH, LONDON; SMETHWICK, near Birmingham; and ROWLEY REGIS, STAFFORDSHIRE.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.



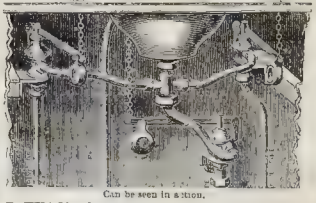
Valve.

Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one 3-inch pipe. No cistern valves, cranks, or wires required. The closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick Lane, Newgate street, London.

J. TYLOR & SONS' PATENT BATH APPARATUS.

The bath and boiler may be fixed in the same or separate rooms, anywhere below the level of cold water cistern. Open or close throat pleasure. No brickwork setting for boiler required.



Estimates given from architects' drawings, or by inspection of buildings.

Catalogues, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

SALES BY AUCTION.

THE NEW METROPOLITAN MEAT AND POULTRY MARKET.—Capital Business Premises of the Foreign Printing and Publishing Company's late Premises, Smithfield, erected within the last four years.

PULLEN, HORNE, & EVERSFIELD are instructed by the Markets Improvement Committee of the Corporation of the City of London to SELL by AUCTION, on the PREMISES, on MONDAY, AUGUST 8, at TWELVE, in lots, all the capital and highly new BUILDING MATERIALS of the extensive Premises lately occupied by the London Printing and Publishing Company, situate at the corner of Charterhouse lane, Smithfield, and Warehouses and Stables in the rear, comprising 800,000 excellent stock bricks, seventy squares of slating, plain and pan tiles, 250 squares of boarded and timber floors, 100 metal frame and other sashes, doors, shutter fittings, York landings and staircases, sills and strings, seventy iron columns, wrought iron girders, eight iron doors, carved stone window-dressings and doorways, folding-gates, slate pavers, lead flats, gutters, and pipes, a large cast iron tank, expensive lavatory fittings and lavatories, cranes and jibs, iron railing, racks, mangers, and stable fittings, York and pebble pavings, stoves, gas fittings, and other useful fixtures and fittings up.—May be viewed Catalogues had at the Architect's Office, Guildhall; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore street, E.C. and 40, Parliament-street, S.W.

CHANCERY-LANE.—Building Materials of Ten large Houses.

PULLEN, HORNE, & EVERSFIELD are instructed by the Directors of the Public Chambers Company, Limited, to SELL by AUCTION, on the PREMISES, on WEDNESDAY, AUGUST 17, at TWELVE, the MATERIALS and FITTINGS of TEN LARGE HOUSES, being Nos. 10, 11, and 12, Chancery-lane, and Nos. 1 to 7, Cursitor-street, comprising a large quantity of red and stock bricks and tiles, doors, floor-boards, partitions, doors, sashes, and other fittings, stoves, ranges, iron railing, tiles and slates, stone coping, several tons of lead, and other materials.—May be viewed two days prior, and Catalogues had of JOSEPH LAVERTY, Esq. Architect, 1, Noble-street, Gresham-street; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

TO LAND SPECULATORS, MANUFACTURERS, BUILDERS, and OTHERS.—Sight of Freehold Land, in one lot, close to the Custom-house entrance of Victoria Docks.

MESSRS. J. WALLEN & CLUNN are instructed to SELL by AUCTION, in one lot, at GARRAWAY'S, London, on FRIDAY, AUGUST 19, at TWELVE, about EIGHT ACRES of FREEHOLD LAND, land-tax redeemed, within a stone's throw of the Victoria Docks. The amalgamation of these docks with the London and St. Katherine's cannot fail to establish them upon a larger and more prosperous and secure scale than ever, and land situate in it must partake of the additional value. The rare instance of so large a plot of land being sold in one lot affords to speculators a fine opportunity for realising the large profit gained in this locality by subdivision; and to manufacturers an admirable site for their purposes.—Particulars, with plans, in due time, of JOHN DINGWALL, Esq. Solicitor, 8, Tokenhouse-yard; at Garraway's; and of Messrs. J. WALLEN & CLUNN, 68, Old Broad-street, E.C. and Romford.

Highly important Building Estate, adjoining the Park Station (Tottenham), on the Great Eastern Railway, about to be extended to Liverpool-street.

MESSRS. J. WALLEN & CLUNN have received instructions to SELL by AUCTION, at GARRAWAY'S, on FRIDAY, AUGUST 19th, at TWELVE, in numerous lots, a fine FREEHOLD ESTATE, of 113 acres, land-tax redeemed, surrounding the Park Station, and extending from thence to the town of Tottenham, only 6 miles from the City. Part of the property possessing a valuable frontage upon the road leading from the Park Station to the Tottenham and Edmonton-road, and in Willoughby-lane, being now ready for building, will be sold in plots for shops, villas, &c. and the remainder, which is rapidly ripening, in two large lots of 60 acres and 30 acres, for building opportunities of liberal speculation to both large and small capitalists. There are also a comfortable farmhouse (easily convertible into a residence for a city man), with garden, orchard, meadow, and a good homestead.—Particulars of JOHN DINGWALL, Esq. Solicitor, Tokenhouse-yard; and of the Auctioneers, 68, Old Broad-street, E.C.

Land for Manufactories, Wharfs, or Ship-yards, at Barking, on the Creek, and a short distance from the Railway Station.

MESSRS. J. WALLEN & CLUNN are instructed to SELL by AUCTION, at GARRAWAY'S, London, on FRIDAY, AUGUST 19, at TWELVE, in two lots, NINE and a HALF ACRES of FREEHOLD LAND, having considerable frontages to Barking-creek, navigable for vessels of 500 tons, and reached by a good roadway at the extreme end of Fisher-street, about half a mile from the railway station. It is believed that chemical factory may be here carried on without opposition, whilst the contiguity to the town of Barking, and the deep water navigation of the lower Thames on the other, are sources of great convenience.—Particulars, with plans, in due time, of EDMUND GRIFFIN, Esq. Solicitor, Ilford; at the Bull Inn, Barking; at the Place of Sale; and of Messrs. J. WALLEN & CLUNN, 68, Old Broad-street, E.C. and Romford.

NORTH LONDON RAILWAY.—CITY TERMINUS.—Materials.

MESSRS. KENNEDY & BONNY will SELL by AUCTION, on THURSDAY, AUGUST 11, at ONE, on the PREMISES, Skinner-street, Bishopsgate, the useful MATERIALS of TEN HOUSES, Shops and a Tavern, with fittings and fixtures. May be viewed day time, and catalogues had at the Auctioneer's Offices, Camden-town and Ringland-gate.

Eligible Investments.

MESSRS. KENNEDY & BONNY will SELL by AUCTION, at GARRAWAY'S, AUGUST 18, at ONE, in Lots, SEVEN VILLA RESIDENCES, in Camden-town and Haverstock-hill; Two Small Leaseholds in Kentish-town; and Three neat Leasehold DWELLING Houses, Bedford-terrace, Old Ford-road.—Particulars and conditions of sale may be now had at the Auctioneer's Offices, Camden-town.

TOTTENHAM.—Freehold Cottages and Land.

MESSRS. KENNEDY & BONNY will SELL by AUCTION, at GARRAWAY'S COFFEE-HOUSE, Change-alley, Cornhill, on THURSDAY, AUGUST 18, 1864, at TWELVE for ONE o'clock, in lots, FOUR FREEHOLD COTTAGES, LAND, and PREMISES, situate on White Hart-lane and Queen-street, Tottenham, near the Compasses public house. Let to weekly tenants. May be viewed at any time, by permission of the tenants, and particulars obtained of the Sole Auctioneers, Messrs. FRASER & MAY, Solicitors, 78, Dean-street, Soho; and at the Auctioneers' Offices, Camden Town.

ON MONDAY, AUGUST 8, at TWELVE for ONE.—Contractors' and Builders' Stock.

MESSRS. LEREW & LEREW will SELL by AUCTION, on the PREMISES, Camden-terrace, Camden-town, the STOCK, comprising 1,200 well-seasoned, white, and pine planks, deals and battens, 3-inch cube of Baltic timber, cut stuff, Lebanon flooring and lining boards, whitet, 6,000 feet white pine board, 14,000 feet quartering, mahogany, birch, fifteen ladders, fifty scaffold-poles, oak sills and quartering, slates, plain tiles, slate cistern, ovens, boiler, and useful building materials; also a capital spring van, with shafts, pole, and horse's spring cart, and three trolleys.—Auction Offices, 2, Carlingford-street, Hampstead-road.

ALDERSGATE-STREET.—First-rate Site for Warehouses or Manufacturing Premises.

MESSRS. EDWIN FOX & BOUSFIELD are directed to SELL by AUCTION, at GARRAWAY'S SALE Rooms, Change-alley, Cornhill, on WEDNESDAY, AUGUST 17, at TWELVE, a compact LEASEHOLD PROPERTY, very advantageously situate within the City of London, and exceedingly eligible for the erection of a warehouse or manufactory. It comprises a range of premises in Hare-court, Aldersgate-street, containing a superficial area of 1,800 square feet, with a cart entrance that can be used without forming with the ordinary street traffic, and having capital light on two sides. It is held by lease for a term of 104 years unexpired, at a ground-rent of 75l. per annum.—Particulars, with plans, of C. M. STRETTON, Esq. 18, Southampton-buildings, Chancery-lane; at Garraway's; and of Messrs. EDWIN FOX & BOUSFIELD, 41, Coleman-street, Bank.

To MANUFACTURING CHEMISTS and OTHERS.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, on TUESDAY, 23rd AUGUST, at TWELVE o'clock precisely, on the PREMISES, Ferry-road West, Millwall, immediately after the Sale of the Lease, the PLANT and UTENSILS of the CHEMICAL WORKS, comprising two pairs 10-horse power high pressure horizontal steam engines, wrought iron Cornish boiler, 18 feet 6 inches long, 6 feet diameter; wagon ditto, 13 feet long by 5 feet and 6 feet deep; three hydraulic presses, with 8-inch and 12-inch rams, set of four plunger pumps, barrel, force, and lift pumps; three circular cast-iron tanks, 3 feet diameter; wrought and cast-iron tanks and pans; four wrought-iron mixing cylinders, nine iron-bound coolers, gas receiver, iron shafting, air cisterns, refrigerator cisterns and worm, 30-inch cast-iron retorts, forge and bellows, crab crane, office fittings, erection of lime kiln and chalk enclosure, and numerous other effects.—May be viewed two days prior, when Catalogues may be had on the Premises; of Messrs. BISCHOFF, COXE, & BOMPAS, Solicitors, 19, Coleman street, E.C.; and of Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

MANUFACTURING WATERSIDE PREMISES, Millwall, Poplar on the banks of the Thames, with possession.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, on TUESDAY, AUGUST 23rd, at TWELVE o'clock precisely on the PREMISES, Millwall, Poplar, the valuable LEASE of extensive MANUFACTURING PREMISES, containing a superficial area of about 1a. or. 9p. with a frontage of 120 feet next the Thames. There is a wharf, brick and timber-built factory 95 feet by 70 feet, with two chimney-shafts, cooling-room, laboratory, counting-house, and yard, with well affording a supply of water. Held for an unexpired term of seven years, at a ground-rent of 65l. per annum. Immediate possession may be had.—To be viewed till the sale, and printed particulars had of Messrs. BISCHOFFF, COXE & BOMPAS, Solicitors, 19, Coleman street, E.C.; and of Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

SOUTH NORWOOD.—First-class Freehold Building Land, in a very healthy and picturesque locality, within a few minutes' walk of the Norwood Junction Station, on the London, Brighton, and South Coast Railway, and only a short distance from the Addiscombe Station, on the Mid Kent Railway, affording access to London Bridge, Victoria, Charing-Cross, Crystal Palace, &c. at frequent intervals throughout the day.

MESSRS. WINSTANLEY & HORWOOD will offer for SALE by AUCTION, at the GUILDHALL HOTEL, Gresham-street, on TUESDAY, AUGUST 30, in 26 lots, a PORTION of the valuable FREEHOLD PROPERTY, known as Enmore Park. Land-tax redeemed, and great title rent-charge included. Most eligibly situate at Woodside green, in the parish of Croydon, and possessing the important advantage of the close contiguity to the Norwood Junction Station, with which it is in direct communication by the road now being made over the adjoining lands. The land is approached by capital roads, known as Birchanger, Howard, and Enmore roads, admirably adapted for the erection of detached villas or cottage residences, for which there is a great demand in this thriving and rapidly-increasing neighbourhood, and is divided into 24 plots of 60 feet each, by a depth of about 200 feet; and two others, of about 300 feet, by a cross decimable depth. The water mains of two companies are laid on to the Estate, and gas is already supplied at Woodside-green. Possession may be had on completion of the purchases; and the plots viewed at any time. Particulars, with plans, are being prepared and will be ready twenty days previous to the sale. In the meantime, further information will be afforded on application to Messrs. DRUMMONDS, ROBINSON, & JILL, Solicitors, Croydon, S.; and Messrs. WINSTANLEY & HORWOOD, Auctioneers, Surveyors, and House Agents, 10, Paternoster-row, St. Paul's, E.C.

PIMLICO IMPROVEMENTS.—Two days' sale of Capital Materials, Fixtures, and Block of Houses.

MR. GEO. HAINES, on the PREMISES, on TUESDAY, AUGUST 9, and MONDAY, AUGUST 15, at TWELVE o'clock, all the very excellent BUILDING MATERIALS of SEVEN NEW DWELLING HOUSES, with workshops and yards walls, &c. with the fixtures, comprising 1,000,000 stock bricks, 200 squares of slating, tiles, and timber, a very large quantity of prime stock brick work, slates, tiles, lead gutters, pipes, and cisterns, the usual internal fittings of the houses, several sets of fronts with doors and sashes complete, and useful fittings and fixtures.—May be viewed, catalogues of Messrs HAINES & SON, Auctioneers, Moorgate-street, and at the Auctioneer's Offices, Grosvenor-street West, Eaton-square, and No. 12, High street, Kensington.

Important Sale of Ironmongery, 74, Mortimer-street, Cavendish-square.—To Ironmongers, Contractors, Shippers, Builders, Smiths, owners of House property, and Others.

MR. W. H. BETTS has received instructions to remove, and SELL by AUCTION, at the above Rooms, on THURSDAY, AUGUST 11, 1864, at TWELVE for ONE o'clock, the large and varied STOCK of an IRONMONGER: consisting of stoves, ranges, cast goods, cut, cast, and wrought nails, in bags and paper; locks and latches of all kinds, hinges, bolts and screws, in iron and brass; brass items in knobs, buttons, sash fastenings, rack pullies, castors, bell and lock furniture, &c.; also a large quantity of files, keys, tools, spades and shovels, rivets, coach bolts, back bands, glass paper, glue, sash-line, and a great variety of other builders' and cabinetmakers' requirements; also several lots of furnishing and miscellaneous items, nests of drawers, counter scales, weighing machine, weights, &c. &c.—On view day prior and morning of sale. Catalogues obtained at the Rooms; and at the Auctioneer's Offices, 68, Leadenhall street, City.

KENSINGTON.—Desirable Freehold Residence, with above an acre of land, prettily timbered, and available for building purposes, within five minutes' walk of the Kensington Railway Station

MR. MARSH has received instructions to SELL by AUCTION, at GARRAWAY'S, on THURSDAY next, AUGUST 11, at TWELVE, the detached FREEHOLD RESIDENCE, distinguished as Western Lodge, Holland place, Kensington, with large pleasure and kitchen gardens, beautifully timbered, containing above an acre, offering great advantages for building purposes, and in a well worthy the immediate attention of capitalists, builders, and others.—May be viewed on application, and particulars, with conditions of sale, with plans attached, may be obtained of TURNELL & SON, Solicitors, 7, King's-bench-walk, Temple, W.C.; at Garraway's; and at Mr. MARSH'S Offices, Charlotte-row, Mansion House.

CHARING-CROSS RAILWAY, CITY TERMINUS.—To BUILDERS CONTRACTORS, PAVIORS, and OTHERS

MESSRS. WILLIS & HARROW have been favoured with instructions from the Contractor to SELL by AUCTION, on the PREMISES, on WEDNESDAY, AUGUST 10th, 1864, at TWELVE for ONE o'clock precisely, the very superior MATERIALS of the substantially-erected range of Offices known as "Dowgate-hill Chambers," comprising the lead and zinc pipes, gutters and ridges, excellent flooring boards and timbers, plate-glass sashes and frames, folding, panelled, and glazed doors, Portland stone landings and staircases, mahogany hand-rails with iron supports, ornamental Portland stone cornices and string, several sets of Bunnett & Co.'s patent curvilinear iron shutters, iron safes, stoves, gasfittings, iron girders, and a variety of useful fixtures and fittings &c.—May be viewed the day prior and morning of Sale, and Catalogues had on the Premises; at the Contractor's Office, Worcester-street, Southwark; and of Messrs. WILLIS & HARROW, Auctioneers and Surveyors, 3, Newman's-Court, Cornhill, E.C. and West Molesey, Kingston, Surrey.

SUTTON, SURREY, in the immediate vicinity of the Sutton Station of the London and Epsom Railway.

MESSRS. BLAKE will SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change-alley, Cornhill, on FRIDAY, AUGUST 12th, at TWELVE o'clock, THIRTY highly attractive FREEHOLD BUILDING PLOTS, comprising the principal portion of the Sutton Park Estate, having with front frontages to the Cheam road, and to new roads, known as Grove and Church-roads. The land, which comprises an area of about seven acres, is elevated, and commands fine views. It has a substratum of chalk, and is admirably adapted for the erection of first-class residences. There is an early prospect of additional railway accommodation with the Metropolis, by which means the importance of the neighbourhood will be much enhanced.—Particulars, with plans, may be had fourteen days before the sale, at Garraway's Coffee-house; at the inns at Sutton, Epsom, Carshalton, and Reigate; of JOHN BERNEY, Esq. Surveyor, Croydon; of H. RICHARDS, Esq. Solicitor, Croydon; and of Messrs. BLAKE, Croydon.

CAMBERWELL.—Valuable Freehold Building Plots, in the midst of a thickly-populated neighbourhood, within two miles of London Bridge, and a few minutes' walk from the Camberwell Station.

MESSRS. DEBENHAM & TEWSON will SELL, at the GUILDHALL COFFEE-HOUSE, near the Guildhall, on THURSDAY, AUGUST 18, at ONE o'clock precisely, in Eighty-two convenient Lots, including an eligible Plot for a Public-house, Seven Acres of valuable FREEHOLD BUILDING LAND, situate near the Rosemary Branch, Southampton-street, Camberwell, close to Peckham-grove, with frontages to Peckham-grove and Diamond-street, as well as to capital new roads now in course of formation. The subsoil includes a considerable portion of good gravel and sand, and the neighbourhood is one in which houses of a moderate size let readily at very remunerative rentals; also a neat Freehold House, having ten rooms and garden; and a Plot of Leasehold Land, with a frontage of 107 feet to Diamond-street.—Particulars and plans (now ready) of Messrs. WEST & KING, Solicitors, 3, Charlotte-row, Mansion-house; and of the Auctioneers, 80, Cheapside.

TO BUILDERS, PERSONS REPAIRING, and OTHERS.—Second Portion of excellent Building Materials removed for Railway Improvements.—Adjoining the Bald Faced Stag, Finchley.

MR. RICHARDS will SELL, as above on THURSDAY, AUGUST 11, at ONE for TWO, exact time 200 lots, containing 10,000 feet of fresh cut quartering, 3,000 feet of floor boards, large girders, rafters, plates, joists, sashes and frames doors and frames, partitions, three capital mahogany desks, two capital wardrobes, 1,000 feet of York paving, stone coping sills, and fire-wood.—Catalogues on the ground, and of the Auctioneer, Tottenham.

150 Chimney-pieces, in nearly all the White and Coloured Marbles and Enamelled Slate; 5,000 pieces of good modern English and French Paperhangings; a few Decorations; 13 Water-closets, and 1,500 feet Gilt Room moulding.

MR. EDWIN WHITE will SELL by Public AUCTION, at his ROOMS, 12, Holborn-bars, an L. Cash-credit, Holborn, on TUESDAY next, at TWO o'clock punctually, PAPERHANGINGS and other ITEMS used in HOUSE FINISHING. The whole will be on view, and Catalogues may be had, three day previous and morning of Sale.

AT GARRAWAY'S COFFEE-HOUSE CORNHILL, WEDNESDAY, AUGUST 17, at THREE, TIMBER—500 loads, Foreign and Colonial. DEALS and BATTENS—100,000 pieces, ditto, ditto, and other wood goods. H. FREEMAN & Co. Brokers, 3, Crooked-lane, Cannon-street, E.C.

TO TIMBER MERCHANTS, CABINET MAKERS, BUILDERS, and OTHERS.—Absolute Sale of the Stock of a Timber Merchant.

MESSRS. J. J. CLEMMANS & SON will SELL by AUCTION, on the PREMISES, Willmer Garden, Horton-Old Town, on TUESDAY, AUGUST 9th, at ELEVEN, the above, comprising 30,000 feet Spanish, Honduras, and Cuba Mahogany; birch and other woods, dry pine planks, deals, and battens; laths, and numerous effects. Approved bills will be taken over 20. On view day prior to the day of sale.—Catalogues on the Premises and of the Auctioneers, 21, Holywell-row, Finsbury.

MAHOGANY AND TIMBER.
FOR SALE BY PUBLIC AUCTION.

ATF. K. BARNES & SONS' TIMBER YARD, CANONS' MARSH BRISTOL, on WEDNESDAY the 10th day of AUGUST, 1864, at ONE o'clock precisely. Luncheon at Half-past Twelve o'clock. For account of Importers.

BY Order of the Secretary of State for India in Council.—NOTICE is hereby given, that TWENTY-FIVE APPOINTMENTS in the Upper Class of the ELECTRIC TELEGRAPH DEPARTMENT in INDIA will, in the year 1865, be open to PUBLIC COMPETITION.

A COMPETITIVE EXAMINATION will, accordingly, be held in this Office in the month of MAY next.—Full printed particulars of the conditions on which candidates will be admitted to the examination, and also respecting the nature of the appointments to be competed for, may be obtained at this Office, on application, either personally or by letter, addressed to the "Under Secretary of State for India," India Office, London, S.W.

India Office, 1st July, 1864.

ANNUAL EXHIBITION of STAINED GLASS at the SOUTH KENSINGTON MUSEUM, MAY, 1865.

The Lords of the Committee of Privy Council on Education have placed at the disposal of the producers of Stained Glass in the United Kingdom a space in the South Kensington Museum for the Exhibition of Stained Glass of a highly artistic character in the year 1865. For the most part the space will be the same as this year.

Applications for place and particulars to be made on or before the 31st OCTOBER, 1864, addressed to the Secretary, Science and Art Department, South Kensington Museum, W

By order of the Lords of the
Committee of Privy Council on Education.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings. For prices, apply to the Manager, Mr TYLER, 12 Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

NOTICE.

BROWN & GREENE'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72–74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c. to meet the great public demand; and also for the consequent more extensive execution of all descriptions of hot water, bath, laundry, and steam work.

73–74, Bishopsgate-street Within.

COMPETITIONS.

TO ARCHITECTS.—The SIR TATTON SYKES MEMORIAL.—The Committee for the Erection of a Memorial to the late Sir Tatton Sykes, Bart are prepared to receive DESIGNS and ESTIMATES for the ERECTION of an OBELISK or COLUMN, on an elevated site on the Sledmere Estate, on the Yorkshire Wolds, near Driffield. Designs and Estimates to be sent to the Honorary Secretaries, on or before the 1st day of OCTOBER next. Twenty pounds will be given for the design considered the most suitable by the Committee, and ten pounds for the second-best design.—Particulars to be had on application to

WM. TOPHAM,
F. C. MATTHEWS, } Hon. Secs.

Driffield, 1st August, 1864.

TERRA-COTTA ENGINE CHIMNEY TOP.—WANTED, DESIGNS and PRICES for HEADING and TOP of an Octagon CHIMNEY, 90 feet high and 4 feet clear inside at top; 10-inch walls.—Address, SPEAR & JACKSON, Etna Works, Sheffield.

THE Town Council of Funchal, Island of Madeira, solicit PLANS and ESTIMATES for a BUILDING adapted to the following named purposes, viz. Town-hall, assize and law courts, police and local tax offices, &c. &c. The cost of the entire building or buildings not to exceed 8,300*l.* sterling. FIFTY Pounds will be paid for the most approved plan, and FIFTEEN Pounds for the next approved; the unapproved plans will be returned. A ground-plan of the site already prepared for the building or buildings can be seen, and further particulars may be obtained on application, at the Town Council Offices in Funchal, Lisbon, and Porto; or to C. R. BLANDY, 25, Crutched-friars, London, E.C.; GEORGE BORDINI, 19, Rue d'Hauteville, Paris; The BARON CONCEICAO, Walnut street, Philadelphia. The plans and estimates to be delivered in London, Paris, or Philadelphia, on or before 5th NOVEMBER, 1864.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.

TENDERS are required for CARRYING OUT the ARTIFICERS' and LABOURERS' WORKS of an estimated value of three hundred pounds and under, at NETLEY, in the County of Hants, under a TRIENNIAL CONTRACT, from the 1st of OCTOBER next, determinable at any period after one year on either party giving to the other three months' notice in writing.

Copies of the Schedules (price seven shillings and sixpence) and Form of Tender may be obtained on application at this Office.

The Secretary of State for War does not bind himself to accept the lowest or any Tender. (Signed) P. RAVENHILL,

Major, Commanding Royal Engineer, Netley.

Royal Engineer Office Netley,
3rd August, 1864

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS, IRONFOUNDERS, &c.

TENDERS are required for LAYING DOWN about 5,040 feet of Cast-iron FIRE MAIN, at the Gun Wharf, Portsmouth, County of Hants.

Persons desirous of Tendering for the execution of this Work must leave their names at this Office, on or before the 23rd AUGUST, 1864, and pay the sum of 1*s.* 6*d.* for the bills of quantities.

The Secretary of State does not bind himself to accept the lowest or any Tender. J. W. GORDON, Col. C.R.E.

Royal Engineer Office, Portsmouth, 9th August, 1864.

COAST GUARD CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.

Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Kingsdown, near Deal, in the county of Kent, may inspect the Drawings and Specifications at the Coast Guard Watch Room, Deal, or at this Office, between the hours of TEN and FOUR, from TUESDAY, the 2nd, to MONDAY, the 15th of AUGUST, now next ensuing, and both inclusive (Sundays excepted)

Tenders to be sent to this Office not later than TWELVE o'clock at noon, of the 16th AUGUST, under seal and directed to the Commodore Controller-General of Coast-Guard, and endorsed "Tender for Kingsdown."

The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or either of the Tenders.

Dated this 26th day of July, 1864, at the Admiralty, Coast-Guard Office, 13, Spring-gardens, London, S.W.

TO BUILDERS.—Mr. T. J. HILL has received instructions to make arrangements with one or more respectable Builders to FINISH an ESTATE in Surrey, about 9 miles from London. There are several pairs of villas in different stages of completion, some covered in and others ready; and to any one who can finish them out at once great pecuniary advantages will be offered.—Apply at the Offices, 70, Old-street, City road.

TO BUILDERS.—Persons desirous of TENDERING for the Works to be done in BUILDING New STABLING and ADDITIONS to HOUSE, at the Bedford Paddocks, Newmarket, for Mr. JOSEPH DAWSON, may see the Drawings and Specification at Messrs. CLARK & HOLLANDS' Offices, Newmarket. Tenders to be sent in to the Architect's Offices, on WEDNESDAY, the 24th of AUGUST next, and the lowest or any Tender will not necessarily be accepted.

TO BUILDERS.—TENDERS are required for ALTERATIONS and ADDITIONS to BELVEDERE CHURCH, Erith, Kent.—Drawings and specifications may be seen, and all particulars obtained, at the Office of the Architects, Messrs. W. G. HABERSHON & PITE, 38, Bloomsbury-square.

TO ENGINEERS.—Notice is hereby given, that the Hastings Local Board of Health are ready to receive TENDERS from persons desirous of CONTRACTING with them for a new STEAM ENGINE, PUMPS, and WELL for the Hastings Waterworks. The specification may be had on application at the Town Clerk's Office, High-street, Hastings, where Tenders, duly signed, must be delivered before TEN o'clock of the morning of FRIDAY, the 26th day of AUGUST instant. The Local Board do not bind themselves to accept the lowest or any Tender.

ROBERT GROWSE, Town Clerk.

Hastings, 10th August, 1864.

TO BUILDERS and CONTRACTORS.—The Directors of the Greenwich Tannery Company (Limited) are prepared to receive TENDERS for the ERECTION of their WORKS, Plans and specification of which may be seen at the Company's Office, 26, Bishopsgate-street-within, E.C. between the hours of ELEVEN a.m. and FOUR p.m. Sealed Tenders, marked "Tender," must be delivered at the Company's Offices on or before the 30th AUGUST instant, by ELEVEN a.m. The Directors do not bind themselves to accept the lowest or any Tender.—By order,

FREDERICK W. CHAPLIN, Secretary.

CONTRACTS.

TO CONTRACTORS.—The Trustees of the Town, Port, and Harbour of Whitehaven are prepared to receive TENDERS for SEWERAGE and OUTFALL WORKS for the drainage of the said town and neighbourhood. Drawings and specification, prepared by Mr. HAWKSLEY, Civil Engineer, 30, Great George-street, Westminster, may be seen at his Office, and at the Office of the Secretary to the Trustees, at the Town Hall, in Whitehaven (where bills of quantities and other particulars may be obtained), on and after MONDAY, the 1st day of AUGUST next. Sealed Tenders, addressed to the Secretary to the Trustees, must be delivered at his Office, in Whitehaven, on or before MONDAY, the 22nd day of AUGUST, but the Trustees do not pledge themselves to accept the lowest or other Tender, although they will do so unless there should appear to them to be sufficient reason for the contrary.

By order, JOHN COLLINS, Secretary to the said Trustees.

Queen-street, Whitehaven, 22nd July, 1864.

BOARD of WORKS for the HACKNEY DISTRICT.—Notice is hereby given, that the Board of Works for the Hackney District will, at their meeting, to be held on the 18th day of AUGUST next, at the Town Hall, Church-street, Hackney, at ELEVEN o'clock in the forenoon precisely, be prepared to open TENDERS for the supply and delivery of 10,000 tons (more or less) of the best BLUE GUERNSEY GRANITE, broken to a gauge of 2½ inches, to be delivered and landed at their Wharfs, at Cambridge Heath and Kingsland Bason, in such quantities and manner as shall be directed by the surveyor. Any further information may be obtained by applying to Mr. JAMES LOVEGROVE, C.E. Surveyor to the Board, at his Office, Town Hall, Church street, Hackney. Tenders, with samples, to be sent in on or before the 17th day of AUGUST next, addressed to the Clerk, and endorsed "Tender for Broken Granite." The Tender to state the difference (if any) in price for any portion that may be ordered after the 29th of SEPTEMBER. Persons contracting will be required to enter into a bond or security, with two approved sureties, for the due performance of the contract. The Board do not bind themselves to accept the lowest or any Tender. The parties tendering are expected to be in attendance at ELEVEN o'clock, a.m. (Signed) RICHARD ELLIS, Clerk.

Town Hall, Hackney, August 4, 1864.

BOROUGH of WIGAN, in the County of Lancaster.—NOTICE to BUILDERS and CONTRACTORS.—Persons desirous of TENDERING for the ERECTION of a GAOL, COURT-HOUSE, and BOROUGH OFFICES, for the said Borough of Wigan, may inspect the drawings and specifications at the Offices of Messrs. NUTTALL & COOK, Architects, 17, Lord-street, Liverpool, between the hours of TEN and FIVE, on and after THURSDAY, the 11th instant, until THURSDAY, the 1st of SEPTEMBER next (Sundays excepted). The quantities may be obtained on application to Messrs NUTTALL & COOK on payment of the sum of 2*l.* 2*s.*, which will be returned on delivery of a Tender. Tenders to be sent in on or before THURSDAY, the 1st day of SEPTEMBER next, under seal directed to C. HILTON, Town Clerk, Wigan, indorsed "Tender for Borough Gaol, &c." The Corporation do not pledge themselves to accept the lowest or any Tender sent in.

C. HILTON, Town Clerk.

Dated this 3rd day of August, 1864

CROYDON LOCAL BOARD of HEALTH.—TO CONTRACTORS and OTHERS.—Persons desirous of CONTRACTING with the Croydon Local Board of Health for FORMING, MAKING, and METALLING the ROADS, CONSTRUCTING the EARTHENWARE and IRON PIPE SEWERS, and other Works upon the Lambeth Freehold Land Societies' Beulah Spa Estate, at Thornton Heath and the adjoining district, in the parish of Croydon, in accordance with the plans and specification prepared by Mr. Baldwin Latham, C.E. the Engineer for the Croydon Local Board, can inspect the plans and specification, and obtain other information at the said Engineer's Office, in the Town Hall, Croydon, on or after this date. Sealed tenders, endorsed, "Tender for Roads and Sewers, Thornton Heath," are to be delivered at the Offices of the Local Board, in the Town Hall, Croydon, on or before FOUR o'clock on the afternoon of TUESDAY, the 30th day of AUGUST, instant. The Local Board do not bind themselves to accept the lowest or any Tender.

3rd August, 1864. HENRY RICHARDS, Clerk to the Board.

BLACKFRIARS BRIDGE.—TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland, granite in blocks and in steps, Ronch, Portland, and rough rubble. Also for the handsome columns, with carved bases and carved caps.—Apply to Messrs. THORN & CO. Contractors, on the Bridge.

TO BUILDERS.—Persons willing to CONTRACT for the ERECTION of a new CHURCH at New Ferry, near Birkenhead, according to the drawings prepared by Mr. E. Haycock, jun. architect, Shrewsbury, may see the plans, specifications, and details at the National School House, New Ferry, about half a mile from Bebington Station, on and after this date. Sealed Tenders received by the Rev. G. R. FIELDEN, Bebington Rectory, Birkenhead, on or before MONDAY, the 22nd instant. The Committee do not bind themselves to accept the lowest or either Tender.

Bebington, August 1, 1864.

TO BUILDERS.—The Managers of the Stratford Presbyterian Church are prepared to receive TENDERS for the ERECTION of a CHURCH, LECTURE-HALL, and VESTRIES at Maryland Point, Stratford, E.—Builders desirous of Estimating for these works are requested to forward their names not later than WEDNESDAY, the 17th proximo, to the Architect, Mr. ALEXANDER PEEBLES, 3, Walbrook buildings, Mansion-House, E.C. where the drawings may be inspected and every information obtained. The Managers do not bind themselves to accept the lowest or any Tender.

PERSONS willing to TENDER for PAINTING COACHHOUSES and STABLING, at Blenheim-yard, Woodstock-street, Oxford street, can inspect the specification on the premises. Tenders to be delivered at the Architect's Office, on THURSDAY, AUGUST 18, at FOUR o'clock punctual.—Mr. Freeman reserves the right of rejecting the lowest or any Tender.

HENRY McCALLA, C.E. Architect,
25, Westbourne-place Eaton-square.

[For remainder of Contracts see next Page.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a NEW WESLEYAN CHAPEL, in the Bow-road, may inspect the drawings, after WEDNESDAY next, at the Office of the Architect, Mr. W.W. POCOCK, 23, Craven-street, Strand, and obtain a bill of quantities on payment of one guinea, which will be returned to parties tendering. The Tenders are to be delivered at the Office of the Architect on TUESDAY, the 23rd inst. at THREE o'clock in the afternoon. The promoters do not bind themselves to accept the lowest or any Tender.

BUILDING of ST. FINBAR'S CATHEDRAL, CORK.—Builders desirous of TENDERING for the above BUILDING are requested to send in their names to the Architect or the Committee before the last day of AUGUST. The quantities will be supplied by that time, or as soon after as possible. A fortnight will then be allowed to make the estimate, during which time the drawings, specifications, and conditions of Contract can be seen at the Cathedral Committee-rooms, Cork; and at the Office of the Architect, Mr. W. BURGES, 15, Buckingham-street, Strand, London. The Committee do not pledge themselves to accept the lowest or any Tender.

LLANELLY NEW MARKET.—To CONTRACTORS, BUILDERS, and IRONFOUNDERS.—The Local Board of Health for the district of Llanelly are prepared to receive TENDERS for the following WORKS:—
CONTRACT No. 1.—For a stone-built boundary-wall, about 2,000 feet long.
CONTRACT No. 2.—For Cast-iron Pillars, about 200 in number.
CONTRACT No. 3.—For Materials and Labour, for roofing of sheds.
Plans, specifications, and forms of Tender may be seen at the Office of Mr. E. BAGOT, C.E. Surveyor to the Board, on and after the 10th instant. Tenders for the Works, endorsed "Llanelly Market Contract, No. 1, 2, or 3," are requested to be sent in to Mr. F. L. BROWN, Clerk to the said Board, not later than FRIDAY, the 26th instant, The Board do not pledge themselves to accept the lowest or any Tender.—By order, F. L. BROWN, Clerk.
Town Hall, Llanelly, August 2, 1864.

TO BUILDERS.—TENDERS are required for sundry ALTERATIONS, ADDITIONS, and REPAIRS to No. 5, Falcon-square, City. The drawings, specification, and conditions may be seen on the Premises, on and after THURSDAY next, the 18th instant. The lowest or any Tender will not necessarily be accepted.
Falcon square, City.

TO BUILDERS.—GLOUCESTER BELL HOTEL COMPANY (*Limited*).—The time for delivery of TENDERS for REBUILDING this Hotel has been extended to the 3rd SEPTEMBER next. Full particulars may be obtained on application to Mr. Hy. JAMES, Architect, Eastgate-street, Gloucester.
THOMAS TAYNTON, Sec. pro tem.

BUILDING GROUND.—TO BE LET, from Michaelmas next, a valuable PLOT of GROUND, adjoining the Lea Bridge Railway Station, with a frontage of 800 feet to the Lea Bridge road, the total area being five acres and a half.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

WATERSIDE PREMISES, City-road.—Messrs. FULLER & HORSEY are instructed to LET, on LEASE, from Michaelmas next, extensive WATERSIDE PREMISES, occupying a site of 21,000 superficial feet, situate on the Wenlock Basin, City-road, and comprising a spacious and substantial modern brick-built manufactory of two floors, engine and boiler-house, with 30-horse power steam-engine and three Cornish boilers, range of brick-built offices, and paved yards with gateway entrances. There is a water frontage of about 200 feet.—For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

FREEHOLD LAND TO BE SOLD or LET on BUILDING LEASES, in Glengall-road, Old Kent-road.
AND ALSO near Forest-hill Station.
ALSO FREEHOLD WHARF on the Surrey Canal, near Old Kent-road.—Apply to Mr MAY, Acorn Timber Wharf, Old Kent-road.

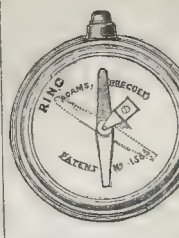
SURBITON.—TO BE LET, on Building Leases, LAND within five minutes' walk of the Station, and close to the RIVER, HOUSES of not less than 50*l.* a year rent. If desired, a portion of the money required will be advanced.—Inquire of Mr. MUDIE, Victoria-terrace, Surbiton.

FREEHOLD BUILDING LAND TO BE LET, at Chislehurst, Kent, on long lease, at moderate groundrents, suitable for villas, cottages, and shops. There being a great want of smaller dwellings, they will be let immediately, and the sites offer a good investment. Also, LAND suitable for first-class residences, commanding magnificent views, all within easy access to rail for City and West end. The situation is celebrated for pure air and water, is high and dry, rich soil, and not to be surpassed in picturesque beauty.—Apply to Mr. F. THORNE, 4, Corbett-court, City; and Rose-bank, Lee-road, Lee, S.E.

TO BE LET, Large and Valuable PREMISES, with water communication, one mile north from the Bank. Formerly occupied by a mahogany merchant, who realized a large fortune there.—Apply to E. & W. STURGE, Bridge Wharf, City-road, E.C.

VICTORIA PARK ROAD, SOUTH HACKNEY.—TO BE LET, with or without a capital Residence, CONVENIENT PREMISES, at present used by a builder, comprising large yard, with counting house, joiners' shop, 63 feet by 33 feet, room under of the same dimensions, 25 feet high; painters' and masons' shops, large three-stall stable, granary, cart-shed, and store-rooms. Rent 50*l.* per annum.—Further particulars to be had of Mr. A. RICHARDS, Auctioneer, Tottenham.

FREEHOLD LAND TO BE LET, on Building Leases, at low ground-rents, on the estate of the Carpenters' Company, at Stratford, Essex, close to the Station and the High street; one portion with river frontage, for the erection of manufactories, and another for small houses or cottages.—For plans and particulars, apply at the Clerk's Office, Carpenters' Hall, London-wall.



BUILDING LAND TO BE LET, situate at Vauxhall, Leytonstone, and Camberwell.—For particulars apply to Messrs. DRIVER & CO. 4, Whitehall, London, S.W.

FOREST HILL.—BUILDING LAND TO LET on this hill, commanding extensive views.—Apply to A. B. 192, Bermondsey-street, S.E.

TO CARPENTERS, BUILDERS, and OTHERS.—TO BE SOLD, Four Ten roomed CARCASES, pleasantly situate, and close to the Hampstead and Kentish Town Railways. Lease direct from Freeholder.—For particulars, apply to Mr. McGILL, 5, Furnival's-inn; or Mr. J. FURNELL, Oak Village, Kentish Town. To be sold together or separate.

BUILDING LAND.—WATFORD.—TO BE SOLD, FOUR ACRES and a HALF of FREEHOLD BUILDING LAND, at Watford (at Nascot), overlooking Cassiobury Park), within fourteen minutes' walk of the Watford Station, suitable for the site of a first-class residence. Capital brick-built stables, coach-house, &c. including three rooms for coachman, and shedding for stock now erected on the land about three years since in the most substantial manner. Apply to Mr. HUMBERT, Land Agent, Watford, Herts.

BLACKHEATH.—A Gentleman is desirous of DISPOSING of PLOTS of FREEHOLD and LEASEHOLD LAND, forming eligible sites for private residences, and being within three minutes' walk of the railway stations.—For terms and particulars, address, Mr F. F. THORNE, Architect and Surveyor, 4, Corbet-court, Gracechurch-street, and Lee, Kent.

ELECTRIC BELLS FOR DOMESTIC USE.

BREQUET'S PATENT INDICATOR SYSTEM, the same as in use at the Grand Hotel, Boulevard des Capucines, Jockey Club, &c. Paris.

The great advantage of Bells communicating to various parts of a building by the employment of electricity over the old system of cranks and pulls, has been thoroughly established in Paris and in other Continental cities.

ADAMS & SON have much pleasure in stating that they have made arrangements with Messrs. Breguet, of Paris, to become their sole Agents for the sale and fixing of their Patented Apparatus upon the indicator system, which has great advantages over all others, and is especially adapted for hotels, public buildings, and other large establishments. The details of this ingenious instrument, together with a description of the various apparatus in use for Electric Bells, may be had upon application, or by post.

WILLIAM S. ADAMS & SON,
Ironmongers by appointment to the Queen and his Royal Highness the Prince of Wales, and also to the principal London Clubs,
Engineers and Manufacturers, 57, Haymarket, and 14, Norris-street, S.W.
Works—Marlborough-row, Marshall-street, W.

NEWLY and most substantially erected WAREHOUSES and LAND, occupying an area of nearly half an acre, near the entrance to the London Docks, well adapted for bonded warehouses, TO BE LET on LEASE, or the Freehold to be sold.—Apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

TEDDINGTON, SURREY.—TO BE LET, on Building Lease, for ninety-nine years, with every advantage to the builder, a valuable Piece of FREEHOLD GROUND, with a river frontage, suitable for villas or of a good class. Also a Piece of Land, with a frontage of nearly 300 feet, next the high road and the railway, and close to the station.—For plans and particulars, apply to Mr. T. J. HILL, Architect, 70, Old-street, City-road.

TWICKENHAM PARK near RICHMOND.—Most Eligible BUILDING LAND TO BE LET on Lease, for Ninety-nine Years, in Large or Small Plots Money advanced, if required.—For particulars, apply to W. BACKHURST, at the Estate Offices, Twickenham Park; or EDWARD GUILLAUME, Esq. 14, George-street, Mansion House, London.

WILLIAM MULLER, Artists' Colourman, 62, High Holborn, London.
Drawing Paper, Tracing Paper, Colours in Oil or Water, Drawing Instruments.
Lay Figures for Sale or Hire.

PLASTER of PARIS.—The ONLY London Maker, the best and the oldest established (1830), is ROBESON,
MOUNT PLEASANT, GRAY'S-INN-ROAD, HOLBORN.
The cheap country made article is sold by nearly all the dealers, agents, and pretending manufacturers, careless as to quality. Superfine and fine Plaster unequalled. Good plaster saves labour and vexation.

FOR SALE, an OMNIBUS, built for the purpose of running on a railway, replete with every suitable convenience (nearly new).—May be seen on application at the Three Counties Asylum. Proposals in writing, addressed to the Committee of Visitors, Three Counties Asylum near Arlsey, Bedfordshire, to be sent by or before the 20th AUGUST, 1864.

INDIA-RUBBER MILL BANDS, WASHERS for STEAM JOINTS, HOSE PIPES, and FLEXIBLE TUBING.
A STOCK OF THE ABOVE ALWAYS ON HAND.
JAMES LYNE HANCOCK,
VULCANIZED INDIA-RUBBER WORKS, GOSWELL MEWS, GOSWELL ROAD (opposite Spencer street) LONDON, E.C.

Sash Weights	6s. 0d. per cwt.			

ST. PANCRAS IRON WORK COMPANY,
OLD SAINT PANCRAS ROAD, AND YORK ROAD, KING'S CROSS.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions, China, Glass, and Wood Furniture, of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilators &c.; and the New Registered Venetian Ventilator, so much admired, 5s. 6d. each.
J. H. BOOBBYER (late STURCH & BOOBBYER), established nearly 200 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.
14, Stanhope-street, Newcastle-street, Strand, London, W.C.

ROBERT MACLAREN & CO. EGLINTON FOUNDRY, GLASGOW.
Manufacturers of all sizes of CAST-IRON MAIN PIPES, for Gas or Water, by an IMPROVED PATENT.
GENERAL IRON FOUNDERS, GAS ENGINEERS, and WROUGHT IRON TUBE MAKERS.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

CAUTION to ARCHITECTS and BUILDERS.—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS;
SMITH'S PATENT WEATHER-TIGHT WATER BAR; and SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS:
The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

NAILS and IRONMONGERY from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES,
A complete List of which will be forwarded upon application to
FRANCIS BIANCHI (late Blyth & Bianchi),
Nail Manufacturer and General Factor, BIRMINGHAM,

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862. AWARDED FOR EXCELLENCY.
The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.
It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.
Extracted from the "London Daily Telegraph," May 19th, 1862.
"INTERNATIONAL EXHIBITION, Class 31.
"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of *side by side*; and the ROASTER is constantly replenished with fresh air."
INVENTORS AND MANUFACTURERS,
JONES & ROWE, WORCESTER,
AGENTS FOR LONDON: BARRON, SON, & WILSON

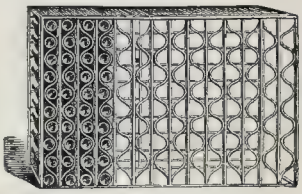
Illustrated Catalogues, with Testimonials and Prices, forwarded application.

WROUGHT IRON WINE BINS.

FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.



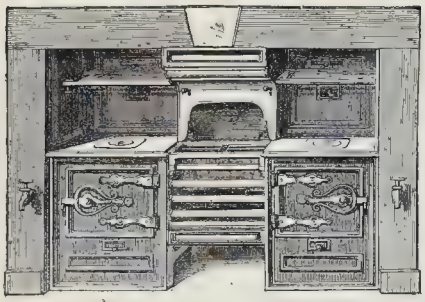
Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with
SEPARATE REST FOR EACH BOTTLE,
Peculiarly adapted for Private Cellars.
No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents o the Bin.

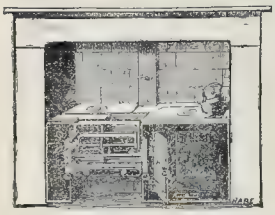


FARROW & JACKSON,
18, 17, and 16, GREAT TOWER STREET; and
1, HARP LANE, LONDON, E.C.
FACTORY, 57 and 58, MANSELL STREET.

THE IMPROVED OPEN FIRE KITCHENER,

Manufactured by

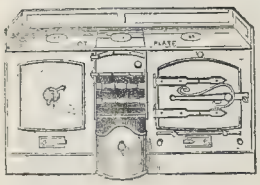
WM. OWEN,
PHŒNIX IRON WORKS,
ROTHERHAM,



Possesses all the advantages of the ordinary Close Fire Kitchener, in having excellent Hot Plates on top of Ovens, for boiling, steaming, or stewing, with the additional advantage of having a thoroughly effective and deep OPEN Fire for roasting purposes.

The Ovens are heated upon Bradley's Patent Principle (under which W. O. possesses the sole right to manufacture), and by which a great economy of fuel is effected.

These Kitcheners are made of all qualities and sizes, suitable for all classes of houses, from the cottage to the mansion; and can be OBTAINED THROUGH ANY IRONMONGER in the UNITED KINGDOM.



WM. OWEN,
GENERAL IRONFOUNDER, STOVE GRATE AND FENDER MANUFACTURER,
PHŒNIX WORKS, ROTHERHAM.

CUNDY'S
PATENT BRICK OVEN DOUBLE FALL-DOWN BAR KITCHEN RANGE.

This Range, also
CUNDY'S PATENT BRICK OVEN
SEMI-CLOSE RANGE,
and
PATENT COTTAGER'S KITCHENER;
Also CUNDY'S Patent Original FIRE-BRICK
Warm-Air Ventilating STOVE,
suitable for CHURCHES, HALLS, SCHOOLS,
and STAIRCASES,
can be seen in operation daily at the
SHOW-ROOMS of the MANUFACTURER,

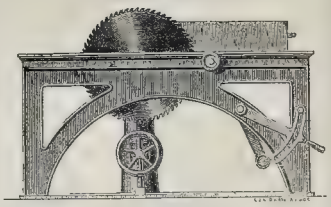
Wm. ADDIS, Wholesale and Retail Ironmonger, Stove Grate and Range Manufacturer,
6, 7, & 15, LEICESTER STREET, LEICESTER SQUARE, LONDON.
A Prospectus, with full Description and Price of the above, will be sent per Post on application.

THE LEAMINGTON PRIZE KITCHENER.

These Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.



All Goods delivered free within Five Miles.

BURT & POTTS,
WHOLESALE AND MANUFACTURING IRONMONGERS,

Manufacturers of Gas Chandeliers, Glass Lustres, &c. &c.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS.

These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

BY APPOINTMENT TO H.R.H. THE PRINCE OF WALES.

J. BARTON, having entered upon the extensive Premises, No. 370, Oxford street, adjoining his Patent Stable Fitting Manufactory, begs to solicit attention to his large and well-selected STOCK of STALL and LOOSE-BOX FITTINGS, HARNESS ROOM REQUISITES, &c.; also to invite inspection of the newly-erected Practical Stable, now on view. Illustrated Catalogues on receipt of Four Stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.
MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

THE PRIZE MEDALS

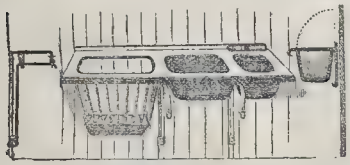
LONDON, 1851. PARIS, 1855. LONDON, 1862.

Awarded to

COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.

For progressive and general improvements in



STABLE FITTINGS AND HARNESS BRACKETS.

Awarded a prize at the Paris Exhibition,

Patronized by the English and French Governments, as well as by the principal Nobility, Gentry, and Hunting Establishments in the Kingdom.

In use at her Majesty's Stables, Aldershott and Balmoral.

COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Watertrough, and Wrought Iron Rack, united to an iron top-plate, and forming one complete and useful fixture, having COTTAM'S Patent Noise-less Halter Guide and Collar Rein attached, which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar.

COTTAM'S NEW PATENT SEED BOX, an important addition to the above fittings, being simple in construction, light, and durable, promotes cleanliness, and is economical in its results.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER, for the above, is a most essential addition to their fittings; it is never in the way; can be placed and replaced in an instant; while its cheapness, simplicity, and utility in keeping the contents of the trough clean, and regulating the quantity to be taken, is quite sufficient to insure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

COTTAM'S IMPROVED WROUGHT-IRON VENTILATING BRACKET preserves the shape and allows a free admission of air to the under parts of the saddle.

COTTAM'S IMPROVED SURFACE GUTTER, with perforated moveable cover, the use of which prevents accidents, and can be easily cleaned out.

COTTAM'S CAST IRON SANITARY TRAP, from its improved construction, gives a full water passage, and does not allow any smell to ascend from the drain.

PATENT LOOSE-BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron gates, fencing, hurdles, &c.

Illustrated Catalogues and Estimates gratis, upon application to

COTTAM & CO. 2, WINSLEY STREET, Oxford Street, London, W.

WHERE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS-ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Canpat Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and Particulars sent on application.

THE FURNISHING OF BED ROOMS.

HEAL & SON have observed for some time that it would be advantageous to their Customers to see a much larger selection of Bed-room Furniture than is usually displayed, and that to judge properly of the style and effect of the different descriptions of Furniture, it is necessary that each description should be placed in separate rooms. They have therefore erected large and additional Show rooms, by which they are enabled not only to extend their Show of Iron, Brass, and Wood Bedsteads, and Bed room Furniture, beyond what they believe has ever been attempted, but also to provide several finished rooms for the purpose of keeping complete suites of Bed room Furniture in the different styles.

Japanned Deal Goods in pale colours, complete suites of five or six different colours, some of them light and inexpensive, and others of a plainer description. Suites of Stained Deal Gothic Furniture, Polished Deal, Oak, and Walnut, are also set apart in separate rooms, so that customers are able to see the effect as it would appear in their own rooms. A suite of very superior Gothic Oak Furniture will generally be kept in stock, and from time to time new and select Furniture in various woods will be added.

Bed Furnitures are fitted to the Bedsteads in large numbers, so that a complete assortment may be seen, and the effect of any particular pattern ascertained as it would appear on the Bedstead.

A very large Stock of Bedding (HEAL & SON'S original trade) is placed on the BEDSTEADS.

The stock of Mahogany Goods for the better Bed rooms, and Japanned Goods for plain and Servants' use, is very greatly increased. The entire Stock is arranged in eight rooms, six galleries (each 120 feet long), and two large ground-floors, the whole forming as complete an assortment of Bed room Furniture as they think can possibly be desired.

Every attention is paid to the manufacture of the Cabinet-work, and they have just erected large Workshops on the premises for this purpose, that the manufacture may be under their own immediate care.

Their Bedding trade receives their constant and personal attention, every article being made on the premises.

They particularly call attention to their Patent Spring Mattress, the Sommier Elastique Portatif. It is portable, durable, and elastic, and lower in price than the old Spring Mattress.

HEAL & SON'S ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed room Furniture sent free by Post.—196, 197, 198, Tottenham Court-road, London.

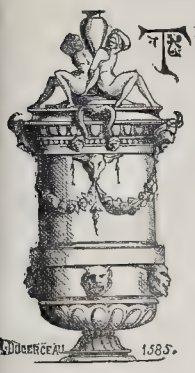
VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for the admission of Pure Air.



THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 119), Union-street, Borough, London.

The Builder.

VOL. XXII.—No. 1123.

*Exemplification by Art of the History of Our Lord.**

THE graceful addition made by Lady Eastlake and Mrs. Jameson to the literature of art, has the twofold interest, diversity and vigour of duality of authorship. It may be doubted whether this vast subject, spread over so many ages and so many lands, could have been grasped in a more masterly manner than it has been by the two writers in question; the peculiar training of the one and the position of the other having pre-eminently qualified them for the task. It will be remembered that Mrs. Jameson some twenty years ago issued the first two volumes of a series illustrating Christian art, and in the interval followed these up with further digests of her gleanings, entitled, "Monastic Orders," and ultimately, by the "Legends of the Madonna." This long labour in the same field necessarily enabled her to store up a large amount of the material required for a work she had reserved from the first as the head corner-stone of her undertaking. In the midst of her task, after she had drawn up in a programme the form and sequence this work should take, and written some 200 pages of it, she was removed. That her intentions should, nevertheless, be carried out, her family and publisher placed her notes and journals in the hands of Lady Eastlake, who has ably accomplished its completion.

As the notes left by Mrs. Jameson were for the most part descriptions of pictures, Lady Eastlake was left entirely unfettered in her judgment, and by far the larger portion of the work may be regarded as the expression of her own unbiassed opinions and independent criticism—the effort of her unassisted ability. Living in what may be called an art atmosphere, both in companionship and counsel, the wife of the president of the Royal Academy has enjoyed rare opportunities for acquiring fitness for the execution of a theme so exalted, and unequalled advantages in its prosecution; foreign galleries, libraries, and museums, as well as our own store-houses, being alike in her acquaintance and at her service. The selection of the very spirited and indispensable illustrations, some 300 in number, is entirely due to her taste and discrimination.

Mrs. Jameson proposed to relate the manner in which art has depicted the life of our Lord in the following mode:—First, without regard to the chronology of art, she placed upon her programme the ideal and devotional expression of our Lord's mission. In the next section she proposed to give the varied renderings of the life of our Lord on earth; and the last was to be devoted to the types from the Old Testament. While making use of Mrs. Jameson's conception of the range of subjects coming within the scope of the proposed history, Lady Eastlake has improved upon the sequence, by returning to the order followed by previous classifiers of Christian art. We are accordingly presented with a chronological arrangement of the incidents of our Lord's life, commencing with the fall of Lucifer and the Creation, and terminating with the visionary, vague, dreamy portraitures in which art has endeavoured to prefigure the awful grandeur of the last judgment. It was impossible to combine the chronology of art with that of the facts represented: this sequence is, therefore, the best compliance with the interests of the subject that was obtainable.

Although pictorial art has borne the chief burden in exemplifying the life of our Lord, a wider range of artist-labour has been carefully searched for the representations that will show us the sentiment of those who wrought so many centuries nearer to the occurrence of the facts depicted. The treasures of the catacombs, sculptures on sarcophagi, and mural paintings; mosaics, doors of churches, ivories, enamels, gems, glass, miniatures, and early wood-blocks, have been examined for the information they can yield. Ancient stained glass appears to have been the only vessel that Lady Eastlake has left sealed.

For many ages Christian art was to the mind as bread to the body. It was certainly possible to exist on other fare, but its acceptation yielded a nourishment otherwise unattainable. It fed, filled, and sustained. It was the accessory of all religious instruction, the ready exponent of all doctrine. All teaching took form, colour, and reality in men's minds by its aid. The preacher accosted the ear, the painter addressed the eye. In answer to what was required of it, Early Christian art was a literal depiction of Biblical facts with all the fidelity that the scant appliances at the command of the limners could compass. Mature art, or art after the introduction of printing, had loosened the chains that bound knowledge hand and foot, made no such immeasurable stride as might have been expected. If there was better anatomical drawing, there was also a looser rendering of facts and less earnestness. Art was no longer governed by truth, but bowed down before plastic, plausible Fancy. But before art had attained the former usefulness and dignity there was a period of some three centuries, in the first days of Christianity, in which it was unrecognized. The Jews, especially enjoined to abjure graven images, were not likely to have viewed with favour classic art; and to Gentile converts, newly repudiating the bondage of paganism, we may suppose it must have had peculiarly disagreeable associations. But as time wore on, and the Mosaic influence was lessened and the bitterness of repudiation had passed away, art began to take up the sacred story. Christian art, so to speak, was not a new birth, it was a new growth upon an old stem. That it was not given to any or either of the early Christians in the exercise of their creative faculty to produce anything of a very different nature to that with which the wreck of Rome had left them familiar we may assure ourselves by a rigid examination of the contents of the catacombs. The story was different, but the manner of telling it very similar. Those whose opinion should be of weight have agreed that the object preserving the earliest manifestation of an application of art to Christian purposes, is the sarcophagus of Junius Bassas, found in the catacombs when they were first explored in the sixteenth century. This, at first sight, might be easily mistaken for a pagan monument, there being nothing in the character of the drapery or ornament to indicate an entirely new birth; but a closer inspection shows in its ten compartments a consecutive series of Biblical incidents, commencing with the fall of man and ending with the denial of our Lord by St. Peter.

As mediæval art receded from classic trammels it appears to have girded its loins and set out on a fresh path. But it would be useless to deny that classic traditions paid it some service by the way. The apple, for instance, is but a reproduction of the golden fruit in the garden of the Hesperides; the serpent, of the dragon that guarded it. The Hebrew word given in the sacred text is the generic term for all fruit. Greek art represented figs as the particular fruit partaken of by our disobedient parents. Eastern and western art have occasionally shown oranges; and in Burgundy and Champagne the vine has been selected. Roman art was therefore free to choose, and, guided by classic tradition, it chose the apple.

Art has the difficulty to contend against that it can only represent one instant of time. In reality, the next would bring some changes to the action of the story. In this respect its capabilities are distanced by poetry. Conventionalism is the growth of this defect; the use of symbols one of its earliest expedients. It must be admitted that this difficulty occasionally called forth masterpieces of resource, as in the representation of the Seven Days, by an early master. This design is in mosaic, and may be seen in the cupola of the right hand vestibule of St. Mark's Cathedral, Venice. After showing the work of the six days, the Creator, as Christ, seated on a throne, with the six angels on his right hand and on his left, is blessing the seventh day, likewise in the form of an angel. To make this day distinctive from the others as a day of rest, the artist has made it wingless. Lady Eastlake, whose sympathies are with the earlier rather than the later masters, points to this ingenious typification of the inactivity of the Sabbath as an instance of felicitous expression on a par with the power of the most advanced periods. Symbolization found its way to embody the new ideas at first upon small objects, such as signet-rings and gems. The simplest figure frequently represented the most elaborate and abstract idea. Thus the favourite symbol of the fish alluded to the regenerating waters of baptism, and typified the convert caught by the Galilean fishermen, who were told to be fishers of men. Treated as an acrostic the Greek word for fish also represented "Jesus Christ, Son of God, Saviour." Here was a volume of thought compressed in one rude outline. A ship typified Noah's Ark, and that object in its turn symbolized the Church. The dove, anchor, and lyre, are also in the list of symbols mentioned by Clement of Alexandria (who died at the beginning of the third century), as being proper to be used on rings by Christians. The diagram, a figure composed of a multiplicity of symbols, gives a mystic interpretation that was in early favour. The signs by which art distinguishes the various personages in Sacred History are of much later adaptation than these symbols. The key, always placed in the hands of St. Peter, first appeared on a coin in the reign of the Emperor Charles the Bald (ninth century), but was not constantly used till the fourteenth century. Even the cross, originally a heathen symbol, was likewise not familiar in its simple form, in Christian art, till an advanced period. St. Chrysostom deposes to the frequent use of a cross in his time; but this has been ascertained to be the so-called monogram of Christ composed of the two Greek letters X or Ch and the P or R. In the days of Constantine the same monogram still appears on coins, and, in fine, the middle of the fifth century had arrived before the simple sign of the cross came into vogue. This is accounted for by the fact that death by crucifixion continued to be inflicted upon offenders up till within a century of this time. It required, at least, the lapse of a hundred years before the horrible associations could die out and the sign be looked upon in a devotional and mystical light as the emblem of the Christian

* "The History of Our Lord, as Exemplified in Works of Art; with that of His Types:—St. John the Baptist, and Other Persons of the Old and New Testament." Commenced by the late Mrs. Jameson, continued and completed by Lady Eastlake. In two vols. London: Longman, Green, Longman, Roberts, and Green, 1864.

faith. Lady Eastlake displays considerable research at all times, but this is particularly evident in the section of the work in which she traces the eventual use of the cross in its various forms with its development into the crucifix. She arrives at the conclusion that the cross symbolized the person of the Redeemer, and that the crucifix was intended to convey something akin to a realization of the crucifixion, but only in an abstract figurative way by no means identical with a representation of our Lord's Passion. Previous writers have alluded to an intermediate crucificial form in which the figure, devoid of signs of suffering or torture, might be a phantom hanging on the cross, thus shadowing out the substance of a Gnostic heresy. But Lady Eastlake has been able to find no such example. The nearest approach to this rendering belongs to a much later period of art, illustrated by the Hohenlohe Sigmaringen Crucifix. This, if we may be permitted to say so, might be construed into a corroboration of the tradition that earlier art had treated the subject in the same manner. The figure is young, beardless, and beautiful, reposing on the cross rather than fastened to it; although a belt passing over the waist connects the two together. The arms are outstretched with an air as of one about to embrace those who gazed upon it with joyous serenity: a sweet peace, rather than pain, or sacrifice, being the sentiment conveyed. A score, or more, of illustrations throw light upon this stage of the development of symbolization.

The direction taken by art most curious to follow is the endeavour to point out and render scenes and personages in the Old Testament as types of those in the New. This pathway has been as laboriously travelled by artists as by schoolmen; and consequently this phase of art's history of our Lord is treated at great length. Adam, Abel, Noah, Isaac, Jacob, Joseph, Moses, Joshua, Jephthah, Samson, David, Solomon, Elisha, and Job have been all given as types of our Lord in the same way that Elijah is represented to have been a prefiguration of John the Baptist. The Fall of Man must necessarily have preceded the occasion for atonement; these two facts are, therefore, frequently treated together as indissolubly connected with one another. Indeed, in most instances where the history of our Lord is rendered in a series, whether in sculpture or painting, it is commenced by a representation of Adam and Eve beneath the tree of knowledge; and the mystical association has been found to be still further worked out by giving the tree the form of a cross. Abel is accepted as a type of our Lord because he was the first of mankind who was righteous in the sight of God, the first who placed a sacrifice on an altar to God, and the first who was put to death unjustly. The scenes art has chosen to depict in these histories are not always strictly scriptural. Queen Mary's prayer-book, in the British Museum, shows Cain trying to cover up the dead body of his brother with leaves. A French bible of the end of the thirteenth century shows Cain leading Abel by the hand emerging from a castellated gateway furnished with a bridge over the most. In another instance, Lady Eastlake has detected Cain keeping his hat on in the presence of the Creator as a conventional expression of disrespect. Lucas van Leyden, following tradition, has left a fine engraving in which the end of Cain is given. The blind Lamech, accompanied by a boy bearing arrows, is in the act of bending his bow with the evident intention of shooting a human figure sitting crossed-legged beneath a distant tree and resting his head upon his hand in an attitude expressive of weariness of life. Similar versions of this rabbinical legend concerning the death of Cain are to be found on the stalls of the Cathedral of Amiens, in the Campo Santa, at Pisa, and on the north side of the cathedral at Modena. The mention of this fact leads us to remark upon one of the errors of Christian art. She is frequently to be found straying beyond the bounds of truth. With how much more respect we should have surveyed her creations if it had come out in the evidence of such an examination as that to which the present and similar works have given rise, that in no single instance had the plain scriptural truths been exceeded. But in many instances the oriental charms of tradition have proved too seductive, and labour that should have been spent on truth has been lavished on fable. Returning to the types, Noah, as the builder of the ark, was interpreted into the great founder of the Church, his ark into the Church, the deluge into baptism. Abraham and Isaac, from very early times, were looked upon as symbols of the great sacrifice. The great father of nations gave his son for a sacrifice, and that son carried the faggot with which to light the altar-fire, up the same path, on to the same mount, as that up which Jesus carried the cross. To intensify this abstraction, the wood carried by Isaac is generally placed crossways on his shoulders. St. Gregory of Nyssa alludes to the frequent rendering of this vivid type, and says he can hardly refrain from tears on beholding it. With such an acquiescence it is not to be wondered at that the same mystic meanings, once found, in the other numerous personages mentioned were much elaborated. This led to an exaggerated strain to twist every incident in the old writings into a foreshadowing of the events in the life of our Lord. The translation of Enoch was a prefiguration of the ascension. The three mighty men who penetrated into the camp of the Philistines to procure water from the well of Bethlehem are, under this influence, made to typify the three kings at the nativity. Allegory is doubtless an instinct of art, but the rendering of history is a more important object than a gratification of a feeling for the fanciful, and we would that the artists of old had borne this fact in mind.

Anachronisms appear to have been ever the pitfalls of art. In mediæval times we may see that art not unfrequently perpetrated the error of draping representations of Scriptural figures in what were then modern costumes, and of placing as accessories to sacred subjects modern every-day objects; and, not warned by the effects of this unpleasant shifting of time and place, modern artists reversed this practice, and with equal absurdity and for a long season depicted moderns in classic costumes. When Benjamin West announced his intention of giving the death of Wolfe in the actual regimentals worn at the time, Sir Joshua Reynolds endeavoured by every argument in his power to induce him to alter his mind, believing that the dignity of the subject would be ruined by such a course. The reverse of this treatment may be seen in a Flemish Bible of the fifteenth century in the Burgundian library at Brussels, where, in an illustration of the opening passage in the 69th Psalm, in which David cries, "Save me, O God, for the waters are come in unto my soul," David is seen floating in water, nude but crowned, with a line of comfortable Flemish houses fringing the shore. Again, in a painting upon the walls of the church of St. Angelo, in Formis, Adam and Eve are shown going from Paradise gorgeously dressed, the latter wearing a furred train so long that she is obliged to hold it up as she picks her way. In another instance, in a painting of the Paul Veronese school, Rebecca is represented alighting in the arms of Isaac, who is dressed as a Venetian cavalier. It may have been the frequency of these anachronisms that led to the practice of painting portraits in Scriptural subjects. Pointel, the banker, commissioned Poussin to paint him a picture showing the different styles of beauty of young women, who saw no want of reverence in choosing Rebecca at the well as his medium. In late art this sin was frequently committed. In the Psalter of Henry VIII., in the British Museum, King David is a portrait of Henry, and the fool a likeness of Somers, the court jester, in the illustration of the passage, "The fool hath said in his heart, There is no God." Titian painted the portraits of the Emperor Charles V., his son, afterwards Phillip II., and Cardinal Ximenes, in the "Supper at Emmaus;" and Paul Veronese painted his wife and family in the same subject. Perugino made his picture of the "Resurrection" the medium of handing down his own portrait and that of his pupil Raphael.

Another looseness to be detected in some stages of early art is the want of a due attention to details, such as has left Hagar to thirst in a green luxuriant country. Poussin, even, has given trees and pastures to the desert of the Israelites. Ancient anachronisms have, doubtless, their defenders; and in the case of architecture and furniture it would, perhaps, be difficult to decide whether it would be more desirable to find an approximate reproduction of the forms aimed at, or a bold replacement by those in daily use around the artist. The archæologist, studying Saxon missals, would, we may be sure, prefer the latter, deeming the first but of doubtful veracity, according to the learning of the miniaturist. But, taking Christian art as one vast scheme, not as a series of individual efforts and creations, it should be synonymous with truth. When the catacombs were first opened out after being lost to human knowledge for centuries, it was hoped that art would be able to reveal the opinions that men held upon certain doctrinal points, in the eras immediately succeeding the life of our Lord on earth. The inscriptions and sculptures were classified and anxiously examined, but art failed to yield a sufficing explicitness. This is an instance where a minute attention to a truthful rendering of facts would have been of great value. Perhaps the cunning of men made the difficulty greater, and mystified the truth.

The murder of the Innocents, though a scene in which neither the infant Jesus nor his mother were present, has been a favourite subject for the graces of Christian art. The forty children who may have been wickedly massacred at Herod's command, were unhesitatingly multiplied into fourteen thousand. Rosselli, Fra Angelico, Matteo di Giovanni di Siena, Raphael, Baccio Bandinelli, Daniel di Volterra, Guido, Rubens, Andrea Celesti, Poussin, Breughel, and Jan Steen, have all treated this episode. The miracles, the parables, have also found their numerous expositors, but the grandest expressions of human adoration must be looked for in the portraiture of those scenes, commencing with the Entry into Jerusalem, and including the Crucifixion, distinguished as the Passion of our Lord. Holbein gave the leading incidents of this eventful period in nine designs; Albert Durer depicted them in fifteen; Duccio arranged them in twenty-six. Lady Eastlake, going through them deliberately, gives the passage they depict, with the commentaries they suggest, and the modes taken by the various artists in various centuries, to realise their occurrence. She has also placed before her readers all the extraneous information bearing upon the subject that her researches have brought to her knowledge. Thus, amongst other matters, the nature of the crown of thorns is fully discussed, and the three-thorned acacia, a specimen of which is in the garden of the Bishop's Palace at Fulham, is accredited with the interest belonging to its supposed identity.. She also enters, with just discrimination, into protest against the degradation that art descended to when she permitted her teachers to represent Christ as falling beneath the cross, instead of encouragingly carrying it to the end, and in other ways to sacrifice truth for dramatic effect, errors never committed by masters of the devotional fervour and power of Fra Angelico. With much skill of diction she follows Christian art in its revolutions round its sacred centre, the head of Christ, through these and its extreme phases, the representation of that mystical Trinity which St. Bernard declared was a mystery, that it was "temerity to search into, piety to believe, and life eternal to know," till it culminates in that great test of imaginative power, the rendering of the Last Judgment. Aided by the clever etchings of Mr. Edward Poynter, and the drawings on wood by Miss Clara Lane, Lady Eastlake fulfils one of the first conditions of art. All that she has written can be easily understood by those seeking instruction, as we shall particularise in a further notice.

THE SANITARY STATE OF METROPOLITAN DWELLINGS.

No one who has had personal experience can doubt for a moment that the improved arrangement of the subdivided dwellings in the metropolis is a sanitary question loudly calling for careful attention. The evils of intramural interments, after a severe battle, have been brought to an end; the main drainage of this great city is approaching completion; and in other directions progress has been made; but as regards the dwellings in which vast multitudes are at present forced to reside, the state of things remains most unsatisfactory and serves to injure life and health to an extent which has not yet been sufficiently estimated. During a comparatively recent period, the removal of dilapidated and unwholesome dwellings throughout the London district has been enormous in extent; and up to the present time the houses provided in lieu have been quite insufficient, and the result has been, as we years ago stated would be the case necessarily, that great masses of people are driven into houses which were never intended for the use of numerous families. In one way the demolition of the dwellings which have given place to the construction of railways and other modern changes, is scarcely to be regretted, for it was not easy to overestimate the evil condition of

many of them; but the mischief is, that no sufficient provision of suitable dwellings for the industrious classes, and others of limited income, has been made in their place.

The last report of the Society for Improving the Condition of the Working Classes, which is presided over by the Earl of Shaftesbury, holds out more promise than those which have preceded it. The amount of profit is increasing; and in connexion with the rows and courts that have been altered and made wholesome at a very large cost, the account is satisfactory. In other ways we hear that property formerly unfit for the occupation of various families has been put into a good sanitary state, and at the same time made to afford a fair return to the owners. The so-called model buildings are also increasing in number, and making better returns. This seems to have been in part the result of a considerable advance in the rental of the rooms. Still it is very rare that those places are left unoccupied for many days; in fact, at most of these establishments, there are lists of the names of persons who are anxious for accommodation in them. Structures of this kind will increase in number; but, for several years to come, the health and amount of the death-rate of many thousands of the population of the metropolis will depend on the effective drainage, the prevention of overcrowding, attention to proper ventilation, and the extended inspection of those places, for which we have long earnestly called.

Walk in whatever direction you choose in the metropolitan suburbs, the extent of the building operations which are going forward is astonishing. From the centre of the capital armies of brickmakers and builders are marching on, and driving back the market-gardeners; and, as if by magic, the green fields and the lanes are giving way to rows of houses and macadamised roads. Even now, some of the suburban cemeteries—Highgate and Victoria Park—are becoming inclosed by dwellings; and if the same extent of progress go on, it may be necessary to look further abroad for places for the reception of the dead. Looking at these extensive operations, it is impossible to help feeling regret that so few of those buildings have been reared with a view towards the proper accommodation of workmen and their children. The chief part of the houses are on the old plan, intended for the use of a single family, and will let at the rate of from 30*l.* to 40*l.* a year. We should be glad to be able to report that some efforts equal to the occasion were made to provide suitable homes for the industrious classes of this vast city; and we look with anxiety to see the effect which the working of the metropolitan railways will have in causing the erection of a class of houses which are so much wanted. It has been found that since the opening of the Underground Railway, more than 60 per cent. have been third-class passengers; and, with a view towards still further meeting the wants of the labouring classes, the company have recently run especial trains for workmen, so as to enable them to get to their business before six o'clock in the morning; the fare for the double journey being only 3d.; so that a man may live in the open air about Paddington and reach the City or the other stations at the charge of 1s. 6d. a week.

As each year rolls on, a knowledge of the laws of health spreads more widely amongst the working classes; and when it becomes generally known to what a great extent the health and strength, and happiness and success, of themselves and children, depend upon the sanitary state of their homes, many of the rooms which are at present in use will be no longer tolerated; and there will be a competition amongst capitalists and builders to supply what will be extensively wanted. Much other work might be done usefully. Each parish should get a careful account of the present state of the drainage of streets and dwellings in connexion with the main drainage. We want to know how much branch work has been effectually done and what still remains to be completed.

A law for the proper inspection of metropolitan dwellings in which more than two families reside should be no longer delayed. The chief means now available for inspection are the parish sanitary officers, and a small section of the police, whose duty it is to attend to "common lodging-houses," and to buildings which have been pronounced dangerous and dilapidated, but with those houses which are not licensed the police seldom interfere except in cases when they receive some direct information of the illegal overcrowding of tenemented houses. This interference is not evoked by the numbers which dwell in one room or in the several rooms so long as each home is occupied by a family distinctly related. Thus an aged grandfather or grandmother, with sons and their wives and grown children, or even those borne to them of a fourth generation, may, in defiance of decency and the rules of health, herd together without police interference. But if it can be shown that strangers have been admitted to lodge, the person renting the place can be summoned before a magistrate and made to fit up the house in accordance with the lodging-house act.

It is clear that in the present condition of affairs, it would be impossible to alter many of the tenemented dwellings in use so as to meet the requirements of the Common Lodging-house Act, which is intended more especially for the good management of resting-places for single men who have no family ties; and where a good kitchen, with receptacles for the safe keeping of spare food, clothes, or other property, and the use of a commodious sitting-room, well lighted with gas at night, and supplied with newspapers and periodicals are required: water must also be served to the lavatories and closets, and the cleanliness of the beds, and occupation of the sleeping-rooms in proper numbers by lodgers be seen to. In a house of this description, in George-street, Drury-lane, as it is stated by Mr. Rigby in Mr. Twining's pamphlet, the profits are $14\frac{7}{10}$ per cent. on investment, and in Clark's-buildings, St. Giles's, as much as 10 per cent.* To return, however, to the subject of the inspection of dwellings *let in tenements:* it is certain that the police power of inspection is of but little use; we find, therefore, that while a class, for the most part adults, and who have few cares beyond their own, are protected by wise and necessary provisions, a multitude of the heads of families, who go to form the main power of British industry, and their children, are left without that care which is really under the present circumstances necessary for their safety. The parish sanitary officers, even in the best regulated London parishes, are insufficient for the labour which is needful. How can any one reasonably expect that two sanitary officers can attend to the wants of districts which contain a population of over 100,000 persons, and from 15,000 to 20,000 houses? No wonder that constant complaints are made of delay in the attention of the officers, with accounts of choked drains, overflowing cesspools, the want of water, &c.

The simple perambulation of a district in which 100,000 people dwell, is a labour of time and difficulty, and if the duty is to be confided to the parishes and unions, five sanitary inspectors, instead of two, would find plenty to do if they rightly attended to their work; and if suitable men were selected, the ratepayers would save money in the long run by the increase.

While watching the present system of sanitary inspection, we have noticed on the part of the police an unwillingness to interfere, and on the part of the parish authorities a still greater reluctance to move, unless they are forced to do so by the outbreak of some pestilence, the remarks of coroners and magistrates, or by the strictures of the Press. There is, in fact, a disposition shown to shift the duty from one department to another, and so the public are left in the doubtful and precarious position of a person sitting on two stools.

Matters are better within the City limits; but throughout the metropolitan district, by the want of the renewed inspection of places which have been brought under the notice of the magistrates who have ordered their alteration and improvement, many of these spots we have found either imperfectly attended to, or else, after a few months, in as bad a state of neglect as at the time of the complaint being made.

As we have before said—and increased knowledge on the matter confirms our opinion—the health of the poorer and industrious classes of this vast population, at any rate for a quarter of a century or more (while sanitary changes are going on, and the old, inconvenient, and unwholesome dwellings of the multitude are giving place to better arrangements), and the lives of thousands in each year, depend on the systematic examination of dwellings in a manner to which we have before referred. It is next to useless to wait till complaints come from the tenants and others: many have been reared in the midst of neglect, and know nothing better. With some of the poorest of the community, to be found in large numbers, there is a difficulty in obtaining accommodation of any kind at a rate which they can afford; and should they be led, by sickness and death in their families, to find fault, they are ordered away. Others are in arrears of rent, and fear the broker: thousands are careless of consequences; others do not know how to set about applying for attention; and many, although their children are lying on a bed of sickness and dying before their eyes of poisoned air, see in it only God's will, while in truth they are themselves committing murder.

* In connexion with the rate of the profits on property belonging to societies the cost of general as well as local management should be shown, and that divided in a proportionate rate over each set of houses, would show more clearly the true state of affairs than is now discoverable.

NOTES OF A PROFESSIONAL TOUR IN THE COLONIES.*

For nearly 60 miles to the east of Belize the course of vessels is through intricate passages, amongst innumerable islets, covered to the water's edge with an impervious mass of vegetation, principally mangrove trees, interspersed here and there with a few cocoa nuts, with their graceful, feathery-looking foliage; through narrow channels, on each side of which are steep and rugged walls of coral, and along smooth and unrippled water, which presents a variety of hues, sometimes the most heavenly blue, and sometimes of the brightest and most sombre green, and so clear and crystal-like, that you may see the various occupants of the briny deep, occasionally a shark of huge dimensions, which constantly hover about the ship, or dolphins gamboling and playing sportively around; then the flying fish, on swift and steady wing, and myriads of other fishes, of all shapes and forms, known and unknown to naturalists.

Some of the Kays present a beautiful appearance, rising above the bright blue waste of waters, covered with their bright and dark-green foliage; and the beaches where they are exposed, consisting of a fine white sand, the *débris* of the coral formation of dazzling whiteness: occasionally a small wooden house or hut peers up above the trees, but they are generally uninhabited, except St. George's Kay, which is the health station for Belize, where the sickly and fever-stricken patient seeks restored health, or the resident of Belize repose and the luxury of sea bathing.

There are some good houses erected on the island, which was formerly the seat of Government; but Government House is now disused, and is in a ruinous and dilapidated state, the glory of its former days departed. Attached to the houses are permanent bathing-places, and crawls are made outside them for protection from the depredations of sharks. They are close piled in with a species of palm, called "boutans," which endure long and well in sea water.

The town of Belize is situate at the mouth of the river of that name. The appearance from the harbour is picturesque and striking, and has been compared by Stephens to Venice; but, from what I have heard of the latter city, I cannot trace any resemblance, unless you can compare the marble palaces and elegant gondolas of that "Queen of the Seas" to the timber-built, shingle-covered houses, some of them with no pretensions to beauty, and rude pitpans and doreys covered with awnings.

It is almost like comparing the rough log hut of the squatter, with the well-finished, elegant built mansion of England; but I suppose we must set this down as a high-flown metaphor, the creation of a highly-wrought and inspired imagination. The embouchure of the river was originally crossed with a rude wooden bridge, erected about forty years ago; but it is now superseded by a trussed beam bridge of three spans (described in a previous Volume of the *Builder*, vol. 18, p. 757), which can be seen from the harbour. The account I sent you of the bridge was copied *verbatim* by the *New York Herald*, which was brought down by trading barques, and circulated in Belize, before the arrival of your number by the English mail containing it.

The Court-house is also seen from the harbour, with its flag-staff in front, and colours flying to indicate our flag and number; Government House to the south; a wooden erection, with verandahs and balconies around; and the Church of St. John at the back, with its brick tower, and low shingle-covered spire, embosomed in a grove of mahogany, tamarind, almond, bread-

See p. 590, *ante*.

fruit, and mango trees; and the houses of Front-street decked out in white, yellow, and red, with the graceful foliage of the cocoa nut and cabbage tree, and here and there an aloe overshading them: the whole combined has a pretty and picturesque effect.

The town of Belize contains about 10,000 inhabitants; Corosal, a town to the north of the colony, 4,000; and Stann Creek, to the south, 5,000; and the colony is said to contain 30,000 inhabitants: I am inclined to think that the population is greater, but very much scattered about. As there is no census, or registration of births and deaths, it is impossible to arrive at a correct opinion upon the subject; and it would be difficult to obtain it, as the inhabitants of the country lead a sort of wild, nomadic life, and the presence of an enumerator amongst them would be the signal for a general exodus.

The inhabitants are a motley group of almost all nations,—English, Scotch, Irish, French, German, Spanish, Russians, Belgians, Americans, Caribs, Africans, Mosquito Men, Indians, &c.: there are but few English, chiefly officials, plenty of Scotch, many of the old settlers, a great many Spaniards, doubtless the descendants of the legions of Columbus, and Africans, and a few of the other nations.

The Spaniards appear generally a degenerated race; while the Africans, the descendants of slaves, are many of them a fine, tall, well-made race of men and women.

The military force for the defence of the colony consists generally of about 300 men of one of the West Indian regiments, and a small number of artillery: the former wear the showy Zouave costume, and are a fine body of men. They call themselves the "Queen's Gentlemen;" and verily, if fine dress makes the gentleman, they are not unworthy of the appellation.

The town is about two miles long, from Yarborough on the south, to the barracks in the north, and extends about half a mile inland, with narrow streets running nearly parallel to the harbour, and others crossing these at right angles, also narrow. The river divides the town into north and south.

The streets are generally raised and formed by cutting ditches on each side, using the earth for that purpose, and the level of the land is not more than two or three feet above the sea; so that these ditches are constantly full of stagnant water, into which the inhabitants throw all their filth, and you may imagine the effect this produces on the health of the place, under a tropical sun. Those, perhaps, thoroughly acclimatised or seasoned to it, do not feel it, but the unhappy European rarely or ever fails to be stricken down by the terrible and fatal diseases of the place.

The roadway surfaces of the streets are repaired with the mud and sand dredged from the harbour, and this in time hardens under the power of the sun: no part is macadamised, although there are hundreds of tons of hard stone brought as ballast in the vessels that would do for the purpose, but these are thrown away into the harbour, where they are doing an injury.

When a proposition was made to macadamise them in consequence of a good supply of stone and cheap (prison) labour, the idea was quite scoffed at, and it was said,—"the roads had done before, and they would do again;" and this is the way the resources of our colonies are developed, and civilisation spread amongst them.

The only attempt they have made to form a road is up the banks of the River Belize to Haul Over Ferry (the ancient mouth of the river, the course to Belize being formed subsequently), six miles; and, I understand, 11,000*l.* have been spent in the attempt, and which, now, is all but a swamp, not passable in the rainy season; and they spend hundreds of pounds every year under the direction of a self-taught Negro road-maker (who, by the by, is a Member of Assembly and Assistant Judge), in the vain attempt to keep open the communication.

The traffic of Belize is conducted by water in pitpans, doreys, barges, and schooners, chiefly because the country has not been opened up with roads, and its vast resources developed and brought fairly into action.

The principal public buildings are Government House, and the Court-house (wooden erections in the tropical style), St. John's Church, a cruciform structure erected of London brick, with low tower and spire: the door and window heads are semicircular: the interior is fitted up with native mahogany pews, and a mahogany open Queen Post roof: it is 72 ft. long and 40 ft. wide, with centre and side aisles, and the entrances are through porches at the north side and west ends: there is a vestry on the south side. An apse has recently been erected at the east end, with a large circular-headed window, filled with stained glass, the subject being St. John the Baptist in the Wilderness. The floor is laid with tesselated pavement.

The other church is dedicated to St. Mary, originally sent out as an iron church, but it was placed in the hands of a 'cute Yankee carpenter, who, not understanding the mode and principles of construction, absolutely metamorphosed it into a wooden one, using up what iron he could find a place for.

The great difficulty you have to contend with in the colonies is the want of skilled artizans. They do not offer sufficient inducements for such men to settle amongst them, and the consequences that result are a great waste of money in materials and labour.

There is a large cemetery laid out at Yarborough, the south end of the town, in which the bones of Protestant, Dissenter, and Catholic repose and mingle their dust in peace, but the ground is low, the coffins being generally lowered into the water. There is also a Catholic church, a large rectangular building, erected of brick and stone, and without any architectural merit, although designed by a clerk of the works of the Royal Engineers. There are many Catholics in the colony, and a large sum is voted annually for its endowment. There are also Baptist, Wesleyan, and Presbyterian chapels, the first wooden erections, the last a temporary building, but they are about to erect one of brick and stone, from the design of a Scotch architect.

The barracks are large *wooden* erections, although belonging to the State; and notwithstanding there have been severe fires in 1854 and 1856, and since I left, still it is thought there is nothing like wood, although it can be shown that imperishable materials of stone, brick, and iron are much cheaper in the end, and may be made perfectly fireproof. There are several stores erected of galvanized iron, but from the moisture of the atmosphere and other causes, the material is a failure. One large store in the market-place is erected of brick, stone, and iron, in the Italian style of architecture, and a few others have been erected on the north side of the river, on sites that have been devastated, and cleared by fire.

There is a strong feeling in favour of slate as a roof covering to the houses, &c., instead of shingle, but the great price, 60 dols. per thousand (12*l.*), is an obstacle to their extensive use: several of the public buildings and some private are covered with them.

A gaol was erected about eight years ago, the old one having been burnt down: the materials used are London bricks and stone, and the foundation is laid on piles. It is a rectangular building, with wings at each end, 87 ft. long, and 38 feet wide; wings, 50 ft. by 23 ft. 6 in., and the cost of erection was about 8,800*l.*

The ground-floor of the body of the building contains fourteen cells on each side, 10 ft. by 5 ft. and 10 ft. high, with a passage up the centre, 12 ft. wide. The upper floor has thirty-two cells of the same dimensions. It is well ventilated, and the cells are divided by means of wood partitions, formed of pitch pine planks, and no system of classification or separation is adopted.

The north wing is occupied by the gaoler and family, the south wing by cells for females, debtors, and the hospital. The building is surrounded by a wooden fence on the north, west, and south sides, and open to the sea on the east side. The poor-house is also within this boundary fence. The prisoners are principally employed on the public works, dredging the harbour, &c., which is done by a machine procured from England, at a cost of 600*l.*, and is worked by hand labour, deepening the bar approaching the town, but its operations are of little avail: a steam dredging-machine is required that would dredge at least 1,000 cubic yards per day, to be of much service.

In this part of the world the tides are very small, scarcely more than 1 ft. or 1ft. 6 in. at the highest; but the effect of gales of wind, a "North" for instance, will lower the water 3 ft., and a south wind will raise it much above its ordinary level.

On this account I think it is difficult to obtain correct levels of seas, situate on each side of an isthmus, when the winds are so variable, as they must have a great effect upon the level of the water.

There is also a large and commodious iron market-house, about 100 ft. long and 60 ft. wide (see *Builder*, vol. iv. p. 190): it is one of the best, if not the best, in any of the British colonies in this part of the world. It was erected in 1846, and cost 11,000*l.*: in consequence of the foundation being improperly piled, it has been taken down and re-erected at a further cost of about 2,000*l.*, and the foundation is still bad, further settlements having taken place.

There are also good public schools: they were originally erected to form three sides of a large quadrangular piece of ground, with an open space between, but one has recently been removed on the American system, on rollers, &c., to form an assembly-room, police court, cells, &c., to supply wants much required. They are built of wood on brick pillars 11 ft. high, and are 84 ft. long and 43 ft. wide: the rooms inside are lofty, and the roof is boxed in underneath the collar beams. The west building has apartments erected over it for the head-master, mistress, &c., who are certificated teachers. Their cost of erection was 4,361*l.*

A slaughter-house has also been erected about one mile up the river from Belize, 45 ft. by 20 ft., at a cost of 600*l.* There is also an asylum and hospital. The latter building is not arranged according to the approved system of the present day. The ground-floor has one ward for patients, one for a surgery, and another for superintendent. The upper floor is all in one ward. The large staircase approaching it takes away part of it, and all sorts of patients, with all kinds of diseases, are mixed up indiscriminately together. There is an open gallery (or corridor) and verandah all round the building, for the exercise of patients approaching convalescence.

It is largely supported by dues from the shipping; but our British tars are timid to avail themselves of their privilege, as when prostrated by the deadly fevers of the country few escape its precincts with life.

An artesian well is also in course of sinking here. The works have been in operation about fifteen years, and they have not succeeded in obtaining water yet, although the boring reaches 135 ft. in depth. The first 20 ft. were through alluvial deposit and *débris*, accumulated from time to time by floods, the kind of strata on which Belize stands; then through 40 ft. of soft, light, cream-coloured limestone; then through 20 ft. of yellow or brownish clay; then through 40 ft. of chalk, and then 15 ft. of clay again. There has been no well sunk here previously to any depth, so that they have no knowledge of the geological strata; indeed, not any of the country generally, except what crops out on the surface, and is seen by travellers.

A contract was entered into with a Mr. Connor to sink the well, by the House of Assembly: his tender was 15,000 dols.,—and to find tools for sinking the well, and procuring good water; but nothing if he failed to obtain it; and the Assembly was to provide prison labour, but no stipulations were made as to when the contract was to terminate; and the contractor may, to emulate the Flying Dutchman, bore on and on to eternity.

A good supply of water for the town may be obtained from the River Siboom, about 6 miles south of Belize; but many are opposed to it, as there is a strange prejudice in favour of rain-water caught in tanks from the roofs of the houses, notwithstanding its liability to be injured by the deposits of birds (the black vulture, &c.). Many iron tanks, to hold 10,000 gallons each, are supplied by the Colonial Government for the use of the public; but in dry seasons the supply of water is very scarce.

The seasons, as in most tropical countries, are wet and dry. The former generally commences in the month of June and terminates at the beginning of February: the latter begins in February and terminates in June.

During the dry season there is scarcely ever a drop of rain; the ground becomes parched and hard, and vegetation almost ceases, except where streams and creeks irrigate the land. The wet season is usually ushered in with violent winds from the north-east and east, torrents of rain, and terrific thunder and lightning, which sometimes continues, night and day, for several days together.

The climate is very wet and moist, but as it is favourably influenced by being well exposed to the trade winds, the temperature of the place is therefore rendered endurable to Europeans. The land or westerly winds seldom blow, and when they do the smell is very unpleasant, pasg over many miles of low swampy land covered with decayed vegetable and other matter.

The highest range of thermometer I have seen is 96° in the month of May, and the lowest 60° in December. The rain-fall is said to be only 46 in., but I think it must be considerably in excess of that, as I have known 2 in. of rain fall in one tropical storm: it does not fall drop by drop, as in England, but regular sheets of water.

The physical condition of the country on the coast precludes the idea of salubrity, from its low and swampy character; but I understand, in the elevated regions of the interior the country is eminently healthy, epidemics are unknown, and cholera and yellow fever only prevail sporadically in the low and swampy parts of the coast, and they never assume an endemic character.

Yellow fever preys upon the Europeans not acclimatised, and rarely affects the negroes, mulattos, or coloured people, while I understand cholera commits sad havoc amongst them.

The trade of Honduras has hitherto been confined to mahogany and the dye-woods principally: no cultivation to any extent has been carried out, except a little sugar and rum at Corosal; but I believe it is the intention of the "Honduras Company," who have upwards of one million of acres of land in this colony, to turn their attention to the cultivation of sugar-cane, &c., and they have already broken ground near Indian Church, New River, where a Jamaica planter and hands accustomed to the work have commenced operations. The sugar produced there is generally of good quality, which may be supposed would be the case from the character of the soil,—virgin, rich, and luxuriant.

An impression has prevailed for some time past that the best part of the mahogany timber has been cut, and I believe there is some truth in it, as you do not see logs larger than 3 ft. or 3 ft. 6 in. when squared, and even these are scarce; although, I believe, logs of 5 ft. square (see *Builder*) have been cut formerly in this colony.

The good timber now remaining is too remote from the rivers and creeks, and it would be expensive to cut the best and truck them, so those trees of ready access are only taken.

When there was such a demand for ship-building wood, I have seen logs that would not square more than 9 in. or 10 in. brought into Belize. I consider this a very wanton and reckless destruction of a useful timber, to cut mere saplings for the market, and not allow the wood to grow to maturity and perfection. The best wood cut there is to the north of the river Belize. The cutting commences in the month of August, and is generally trucked in April and May, when the ground is hard and dry, to the creeks and rivers; and about the middle or end of June, when the rainy season sets in, it is floated in rafts down the river to Belize, or brought round from other rivers in vessels or rafts. It is generally trucked at night, the cattle not being able to perform such laborious work in the heat of the day. The midnight trucking is an interesting and picturesque scene. The truck paths are frequently a mile long, and cut 50 ft. or 60 ft. wide through the forest. The lowing of the oxen, the creaking of the huge wheels, the sharp and shrill cries of the men, the echoing and reverberating crack of their long-lashed whips, the lurid glare of their pitch-pine torches in the midst of the dense and dark forest, and in the dead of night, produce an effect almost amounting to sublimity.

There are other useful and hard woods in this country besides mahogany and the dye-woods. There is sappodilla, sumwood, ironwood, billy webb, bulley tree, dogwood, cabbage-tree wood, lancewood, and mangrove,—very hard and durable woods.

If ship-building wood is scarce at home, I would recommend the trial of some of the above woods. They have been used many years in local ship-carpentry, and endure exceedingly well: besides, it would be utilizing the productions of one of our infant colonies. I have many specimens of them. There are also a variety of gum-tree woods.

In fruit-trees there is the orange, lemon, lime, mango, cocoa-nut, sour sop, catechu, alligator pear, citron, pomegranate, tamarind, banana, bread-fruit, melons, pines, &c., &c.

In vegetables there is the yam, plantain (one acre produces as much as 133 acres of wheat and 44 acres of potatoes), maize, beans, rice, sweet potatoes, eddoes (a species of potatoes), ochros, and many English vegetables, besides cotton, tobacco, sarsaparilla, vanilla, chilies, pepper, pimento, indigo, arrow-root, cassava, ginger, &c., &c.

The average yearly amount of mahogany exported is about 8,000,000 feet, or 20,000 tons, for the last ten years at an average valuation of 55 dollars per ton.

Formerly the greater part of the trade between England and Central America and the coast of the Pacific passed through Belize; but this has been diverted by the Panama Railway across the isthmus. Many of the supplies of Belize, provisions, hardware, &c., are obtained from New Orleans and New York; jewelry from Mexico, rough, but pure gold, which is not much in request: Birmingham jewelry from its cheapness best suits the taste and pocket of the negro.

The geology of the country is very imperfectly known: several exploring expeditions have been made into the interior, principally up the rivers, but nothing satisfactory has resulted. It is said that gold and silver exist (which is found further south), also precious stones, iron and copper. The fatigue, exposure, and danger to life that attend these expeditions has hitherto deterred other parties from undertaking a more efficient survey, an object most devoutly to be wished, and which will doubtless be accomplished at some future day.

The geological formation on which the town of Belize stands I have already given, and up the river Belize there is a brownish clay; above that cream-coloured limestone; then schists of various kinds, and slate, which appear to extend through the mountain ranges. On this river there are some fine waterfalls.

In the Siboom river, south of Belize, they have yellow and brown clay, limestone, schists, whitish marble with dark veins, quartz, and slate in the upper part.

I understand, in one expedition up this river, quartz containing gold was found, which was sent to the United States for analysis; but the result never transpired,—doubtless kept secret for ulterior purposes. A great quantity of gravel and boulder stones are found in the upper level of the river, washed down from the mountain ranges.

In the Monkey river, south of Belize, the same formation exists, viz., the clays, limestone, schist, and slates; also granite, basalt, porphyry, and quartz, and indications of minerals. The Manati river, south of Belize, has the same formation on the lower level, but the upper part has indications of copper and lead.

In the rivers to the north of Belize (the Hondo, New river, &c.), a similar formation prevails, and it is generally thought that copper also exists there.

The manager of the Honduras Company proposed some time ago to send a geologist to travel over and examine into the formation of the country; but I have never heard whether it has been carried into effect. It would be very desirable that the mineral resources of our colonies should be thoroughly investigated; but I fear we shall wait some time before the Home Government move in the matter, as they prefer that the greatness of her Majesty's dominions shall be fostered and upheld by the spirit, capital, enterprise, and determination of the people.

In the expeditions that have been made in Honduras, they have proceeded up the rivers in doreys, pitpans, and canoes (some of these are made out of a solid log of wood), taking with them all the provisions they require for the trip, as far as the falls and rapids would permit them, then to walk, wade through the river, or cut their way through the impenetrable bush with "macheats"* almost every foot, to reach higher navigable levels; and at night turn up on a bank with fires lighted around them, to scare away wild beasts, serpents, &c., with the bright canopy of heaven bespangled with stars of great brilliancy for their tent, and Providence their protector and guide. The tardy steps taken by Government to develope and improve the internal resources of our colonies has been a frequent subject of argument with Americans that I have met with: they say, give us the West India Islands, and we will show you the way to make them most productive and flourishing: perhaps they would return to slavery. It certainly appears strange that, with everything lavished upon them by Nature they might require, a fine climate, soil, &c., that many of our colonies should continue so depressed and so little productive; but it may be accounted for in some measure by the want of capital in our planters to properly work the estates, from mismanagement, and from the indolence and scarcity of the labouring population.

"They manage these things better in France." In the French islands Martinique and Guadaloupe, the labouring population are required, under strict surveillance, to account, individually, for the way they obtain their living; and the consequences are, the agriculture of these islands is well conducted, and the estates are described to be "perfect gardens," an expression used to denote superior cultivation.

The same system is adopted in the Danish Islands, which leads to similar results.

The march of intellect has certainly worked wonders: the schoolmaster abroad has spread knowledge so far and wide that the memorable words of Pope are quite obsolete—

"Lo the poor negro, whose untutor'd mind;"

but the effect has been not to teach him the duty of labour, as they avoid it in every way they can, and prefer those occupations that are attended with the least physical energy.

Labour in Belize, I must say, is well paid. Mechanics get from 1½ dol. to 2 dols. per day, for nine working hours; and labourers 1 dol. per day for a similar time.

There is but little law in the colony; and it is blessed with almost a total absence of lawyers, the only ones being the Chief Justice and Attorney-General. All disputes are generally referred to arbitration, and it is seldom that civil suits are entered in the Grand Courts, which are held every three months. A Jamaica attorney has sometimes attended the courts, but the "devil's own" are not at all appreciated there, as in lawyer-ridden England: on the other hand, in the West Indies, litigation is rampant, and lawyers flourish, and that may account in some measure for their decadence. B. C. E.

* A species of cutlass.

HATFIELD TO GORHAMBURY.

The living representative of Sir Robert Cecil, Earl of Salisbury (who died in 1612) is busy on his way by *rail*, from Hatfield to Gorhambury (and for the first time by steam and rail) to shake hands, after leaving the *rail*, with the living representative,—at Gorhambury, Verulam, and St. Alban's,—of Sir Francis Bacon, Baron Verulam and Viscount St. Albans, who died in 1626. The founder of the Salisbury branch of the Cecil family, and the sole representative of the Bacon branch of the Verulam and St. Alban's family, had read one another with consummate penetration—one with lynx-like eyes, the other with viper-like eyes. 1864 it is thought will not have run into 1865 without seeing Mr. Secretary Cecil on his way to Mr. Attorney-General Bacon. They will have much to talk about: a good dialogue between them would suit the pen of Mr. Walter Savage Landor. The route is pleasant, the new line (a single one) skirts a bloody battle-field of the rival Roses (Keyfield it is called) bridges the Ver for the first time with a railway bridge, and affords in so doing a noble view of St. Alban's Abbey, St. Alban's Clock Tower, St. Peter's Church, little St. Stephen's, and a distant sky-line (fine in every respect) of the woods of Gorhambury. The whole district rings with York and Lancastrian "jars," and still seems perfumed with Red and White Roses. The new line commands the ruins of Sopwell Nunnery, rich in its memories of Lady Juliana Berners, her most rare little volume "The Boke of St. Alban's"—equally rich with recollections of the customs and rules of the Blessed Mary of Sopwell—and of Sir Richard Lea, master mason and master of the pioneers of Scotland, to whom, at the dissolution, King Henry VIII. was pleased to give the manor of Sopwell and certain rights, which the master mason was clever enough to turn to good account. Little is now known of Sir Richard and his seat, Lea's Place; or of the brazen font which he brought with him out of Scotland, in which the royal children of that kingdom had been christened. Let us add, that in the pretty little church of St. Stephen's at St. Alban's (Mr. G. G. Scott restorer, and in good taste) is to be seen a fine bronze ante-reformation eagle lectern, the gift, as the inscription shows, of George Creichtoun, Bishop of Dunkeld. Its travels and duties after leaving Scotland are imperfectly known and merit to be fully known. Bibliopoles and antiquaries will not be displeased at hearing that disfranchised St. Alban's possesses among its borough and liberty treasures a very good copy of Lady Juliana's very rare

volume (Wynkyn de Worde, printer), and a silver-gilt mace of the time of Charles II., in the same style and as good as the Royal Society mace. The new line passes underneath the London road, at the twentieth mile-stone from the Great Babel.

MR. HERBERT'S MONUMENTAL PICTURE.

"MOSES BRINGING DOWN THE TABLES OF THE LAW."

Out of the chaos of doubts and doubtful rumours as to what had been done, was going to be, and was known to have been undone in the process of mural picture-production at the House of Lords, the public have at length an earnest of Mr. Herbert's intentions, which may set at rest the most of them; and this testimony of his will account to the less unreasonable for continuous employment extending through several years.

The unfortunate discussion as to the money-worth of such produce, if it be unavoidable, could not take place at a better time than at this, when a really strong argument in favour of the artist is afforded in the general interest occasioned by the appearance of the picture, the unanimity with which it is admired, and the great number of its acceptors as an all-sufficient illustration of Scripture history.

But it would be nearly as difficult to legislate for the guidance of any jury of taste who might wish to arrive at a just verdict as to its merits, as it would be to embody in an individual apprehension of it such a subject as "Moses bringing down the Tables of the Law," although all Mr. Herbert's great abilities are evoked in the trial.

There are some undertakings that at their very commencement promise for those engaged in them but a partial acknowledgment, let the issue of them be as successful as possible. How much praise is due to them, therefore, who conscientiously pursue what they know to be their best course, with a right of election conceded to them by all equally entitled to it, knowing, as well they must, that, after the greatest effort, they must remain content with a very inadequate return for an inestimable amount of requisite learning, patient labour, and skill.

The question of success in this instance can only exist in the adaptations to the occurrence, not in the manner of carrying out the particular conception of it, which is far beyond all question. The composition is most admirably managed for affording prominent presentation of the chief Israelites distinguished in Exodus: Moses descending, with the inscribed tables, for the second time, is met by Aaron and the rulers of the congregation, who perceive with awe the mysterious light that illumines his visage, and appear in their expression of revived faith to deprecate recollection of their former want of it. Joshua and Nun, with the sceptical Nadab and Abihu, Bezaleel, and Caleb, are all designated, and are conspicuous in the groups that comprise it. Other figures, kneeling or reposing, form the foreground, in an arched form, Moses, the key-stone;—amongst them, Miriam; and, more immediately in front, a mother nursing a child, a shepherd, a Nazarite and a Levite;—the acacia-plant in front suggesting the crown of thorns.

Regarded in its abstract qualities, it is undeniably the finest exemplification of his power yet produced by the artist, and an honour to the nation. Its manipulative excellence is as remarkable as the conscientious care with which all matters of costume and accessory have been studied and made subservient to a great purpose; but the difficulty of rendering the theme clearly apparent must be nearly insuperable. Even the supernatural appearance of Moses can but suggest the revelation so lately witnessed by him, and there is no further indication of it the representation is strictly confined to the circumstantial associations of the occasion, leaving more to the imagination than some would expect to be necessary in lieu of something to accept as indicative enough where only positive demonstration was inadmissible.

Of the many who will see this fine performance, most will have taken with them a preconceived notion, their own realization of the occurrence, too long and impressively established to be regarded simply as an idea; consequently they will be satisfied or dissatisfied commensurately as another's conception is more or less identical with their own. How impossible it is to monopolise idea, and how absurd to forget the impossibility. Mural decoration has become a necessity; and if we are enabled to procure such as this after having induced painters like Mr. Herbert and Mr. Maclise to devote their ripest years to the practice of it, how illiberal and unwise to grudge them an increase of remuneration in proportion to their increased deserts. For such works as they are now known to be capable of from a matured knowledge of their materials in use, at least pay them Manchester prices, and secure the results of their experience to the metropolis. Results demand so much as that, even if all the preparatory hard work and brain-wear be not taken into consideration at all; for it would be no easy matter to estimate the cost in effort and reflection to the projectors of it, before perfecting so noble and convincing a proof that some of the present greatest painters of the world are British.

A VISIT TO THE "PALAIS DES THERMES," PARIS.

Crossing the Pont au Change and the smaller one of St. Michel, on the Boulevard Sebastopol, we reach what is left of the ancient palace of the Baths. At the time of the Romans, and soon after the stylus of Julius Cæsar had engraved the name of Lutetia Parisiorum on the iron tablets of history, a palace was erected here, surrounded by gardens, and reaching from the smaller arm of the Seine as far as the Sorbonne. Some have supposed that it was built by the Emperor Julian; but it is probably of more ancient date, and was in all likelihood erected by his grandfather, Constantine Chlorus, who reigned and resided in Gaul from 292 to 306; but Julian appears to have greatly enlarged the original structure, and lived there several years with his wife, the Empress Helena. The mistake probably arose from an anecdote told of him, how, during a very severe winter, both he and his empress were nearly suffocated in their sleep by the fumes of a charcoal fire constantly kept up *in order to dry the walls*. During the reign of the Merovingian kings this palace fell into disuse, for these had built a new fortified abode in the cité, which continued the residence of royalty down to the time of Clovis. The widowed queen Clotilda was the first to return to the old palace of the Cæsars. From that time down to 1180 we find no mention made of it. In that year Philip Augustus gave it to his chamberlain, Henry; and in 1360 it again changed hands, passing into the possession of Peter de Chalus, abbot of Cluny. Of the palace itself only the baths remain to us unto this day, and are known by the collective name Palais des Thermes.

In order to obtain an idea of the original area of these ruins, the visitor should stand up against the iron railing which divides the garden from the Boulevard Sebastopol. He will then be in the centre of what used to be the "Tepidarium," the side walls of which only now remain. They are built of stone, in square and equal courses, having courses of brick every 3 or 4 ft. in height. The third wall, parallel with the Boulevard, constituted the façade of the palace, and is pierced by four arched openings, three being doors, the fourth a window. A small room at the side led to the "Frigidarium," the only example left in all France. It is in the form of a large parallelogram, 65 ft. 7 in. by 44 ft. 7 in., and is vaulted at a height of 59 ft., partly by a single barrel vault, partly by groined arches, supported by eight columns, with capitals, in the shape of the rostrum or beak of a vessel. It is probable that the peculiar ornamentation chosen for these capitals was emblematic of the City of Paris, whose "nautæ," or merchants trading on the Seine, were powerful even in the days of Tiberius; and the ship has always been the distinctive emblem of the French capital. The eastern and western walls are in construction similar to those of the "Tepidarium," just described; but the southern wall is pierced by an arcade of two arches, opening into two other apartments of minor importance. To the north the "Frigidarium" is connected by a high-arched opening with the fish-pond, having a length of 32 ft. 9 in. by a breadth of 19 ft. 8 in. Not the least remarkable is the method by which the reservoir in the centre of the "Frigidarium" was supplied with water. A supply not only of good, but, if possible, of medicinal water was always a matter of paramount importance with the Romans; and accordingly, instead of leading the waters of the neighbouring Seine into these baths, they went to a distance of three miles for their supply. A spring of water containing medicinal properties had been discovered at a village named Rungis, now Arcueil, and from this spring the water was conducted underground, crossing the valley and stream of the Bièvre at a low level. The remains of this aqueduct were discovered in 1544, and are still to be seen. The ground beneath the palace is excavated and vaulted in three parallel rows 9 ft. 10 in. wide, the vaulting resting on walls 4 ft. thick, which are pierced with door-like openings varying from 3 ft. 3 in. to 4 ft. 4 in. in width. The remains of the drains indicate plainly that the water was let off from the baths into the Seine. Forgotten and neglected for centuries, the palace passed into possession of the City of Paris in 1831, and has since served as a museum of Gallo-Roman curiosities, a collection at first begun in 1818 by the Duc d'Angoulême.

Amongst the many objects of interest in this museum is an altar discovered under the pavement in the choir of Notre Dame in 1711. The Latin inscription runs thus:—"The Merchant Traders of Paris have publicly dedicated this altar to the mighty and benevolent Jupiter, in the reign of Tiberius Cæsar Augustus."

NEW INFIRMARY, BISHOP'S WALTHAM.

The first stone of the Royal Albert Infirmary, at Bishop's Waltham, in Hampshire, was laid on the 4th instant, by H.R.H. Prince Leopold, assisted by H.R.H. Prince Louis of Hesse. The undertaking commenced is one in which the Queen takes much interest; and some portion of the funds for the building are derived from a part of the profits of the publication of the Prince Consort's addresses, devoted to the object by Mr. Arthur Helps, who with her Majesty's aid edited the book. The building, so far as at present commenced, is designed to accommodate only about sixteen or twenty patients; but an extension is hoped for at a future period, so as to comprise quarters for convalescents from Southampton, Portsmouth, Winchester, and places further distant. This is certainly an object to which we have special reasons for wishing success. The site of the new building is well chosen; and the locality is healthy. Bishop's Waltham is a place which should interest an architect: for, here, in the palace of which there are now only ivy-covered walls, died William of Wykeham; and here has been lately established an important manufactory of bricks and other articles in clay. Gratifying evidence of progress was to be noticed in a recently-erected building labelled "Coffee House;" and the taste of the town's-people, shown by the decoration of their streets on the day of the ceremony, might be quoted as example for much more important places. Mr. R. B. Critchlow, of Southampton, is the architect of the new Infirmary.

Whatever the skill to be found at the hospitals of large towns, there is no doubt that the establishment of these "Cottage Hospitals" should be promoted. Apart from the hinderance to treatment and recovery of the sick, which results from distance of the large hospital, and the apprehension of removal from relatives, there is the argument in favour of country hospitals, that in the country alone will the patient have the benefit of those remedial influences which are as important as medical treatment.

THE HEAD-PIECE OF THE POLICE.

The new costume of Sir Richard Mayne's department of the police has, by this time, been circulated to an extent which enables most dwellers in the metropolis to judge of the artistic taste which is exhibited in the recent alteration. In connexion with the costume of the police, two main considerations are, fitness and neatness: there is also a need for some distinctive mark by which the men may be easily recognised; and one thing more is certain, that the civic force should not, in the style of their dress, resemble the military.

When Sir Robert Peel's new police was formed the measure was carried with much difficulty, and there was for some time a strong feeling of animosity against the freshly-appointed officials. Every effort was made to still the jealous spirit which existed: the day dress coat of the constables was fashioned after those usually worn by civilians, and the long tail was made available for concealing the staff, which was looked upon with dislike: the hat was also similar to those in general use, with the addition of a thick

crown glazed on the top. The advantage of this, in one particular way, seems doubtful, for while the shine was the means of enabling persons who required the aid of the police to see them from a distance, it was also a signal which enabled depredators to escape: the thick crown was useful in protecting the head, nevertheless the hat was a shocking bad one, being far too heavy and ill-ventilated for use during both summer and winter: besides, it was easily knocked off, and in consequence many policemen have been severely injured.

Great as was the need for improvement in this respect, we cannot admire the new head-piece which has been brought into use to supersede the old. It is of a helmet shape, fitting very closely to the head, with a sort of roll like a cock's comb upon the top, passing from the front to the back of the head. In front there is a black metal cross. The whole is of a dull, funereal black, which is very trying to the complexions of many of the force. The alteration for the worse which is made in the appearance of the countenances of many of the force is remarkable. In the general aspect there is an air of peculiar grimness, and something, moreover, that suggests Russian, Prussian, and Austrian authorities. In fact, the new head-dress is an unsightly article, which does not appear to have sufficient merits as respects usefulness to atone for its ugliness.

As regards the other change, few will regret that the long tails are to be done away with, although we had got so much accustomed to their form and to the deep blue colour of the coats, foiled by the bright white buttons. And it must be admitted that the appearance of the police in the old dress was clean and respectable. It unfortunately happens, however, that if the old coat-tails were too long, those of the new frock-coats are in the extreme of shortness. It is necessary that, as regards the dress of the police, there should be no impediment to swift locomotion; but this would be as well cared for if the coats had 6 or 7 inches of additional length. There being now no room in the pockets for the staff, it is carried in a sheath suspended behind, and does not ensure respect, for the boys are louder than ever in their suggestive comments. If the authorities of Scotland Yard had taken proper advice, the men of the police force would not have been disfigured as they are. They are made to look weak and foolish, and will, consequently, be less effective.

"THERMÆ ROMANO-BRITANNICÆ."

It is not a little singular that we so persistently ignore the real original of the "Turkish Bath," and attribute to an Eastern source the discovery of that very luxury which eighteen or twenty centuries ago was in constant use among the Romans who eventually conquered Britain, and who introduced it into our land for the double purpose of indulging themselves, and of taming our savage forefathers by an enervating process.

Yet so it is; the "Turkish bath" is not really Turkish, but Roman in its origin; and it bears the name of Turkish, because the Oriental nations have somehow or other the art of adhering to the customs of their forefathers, bequeathed to them by the descendants of the ancient Greeks and Romans, while we forget and neglect them; and because hot baths have been for centuries in constant use among the Turks, proving to them the special means of cleanliness, and one of the chief enjoyments of social life, to say nothing of their having well nigh answered the purposes of hospitals. So great was the popular aversion to them here that, when they were first introduced into England, some two or three centuries ago, they were called in derision "hot-houses," and the Londoners turned their Eastern name of "Hammaum" into "Hummum,"—a nickname which still survives, written in duplicate, on the piazza of Covent Garden.

The bath, as we have already hinted, entered largely into the daily life of the ancient Romans, who in their turn had derived it from the Greeks. Warm baths are frequently mentioned in the Homeric poems under the term *θερμὰ λουτρά*, or *λοετρά*,* and constant allusion is made to the practice of bathing by Pindar, Theocritus, and Moschus. Even the stern and hardy Spartans were not above the indulgence of a warm sudorific bath, and from them, as we shall see, the chamber used for that purpose by the Romans came to be called "Laconicum."

We do not know the precise date at which warm baths were first introduced at Rome; but Seneca tells us, in Epistle 86th, that Scipio had a warm bath in his villa at Liternum; but this, as remarked by Mr. Rich in the "Dictionary of Greek and Roman Antiquities," was simple in plan, and consisted of only a single chamber. Valerius Maximus, and Pliny, however, speak of "Balnea pensilia,"—a term which implies a greater amount of architectural design, and can be only understood as implying that the flooring of the chambers was raised over the hollow cells of the hypocaust, which Vitruvius calls "Suspensura caldariorum" (v. 11). Cicero incidentally mentions a vapour-bath in his house, in a letter to his brother Quintus (iii. i. 1); and in one of his speeches (Pro Cæl. 25, 26) he speaks of the Balneæ Senias as open to the public on the payment of a small fee, which, as Juvenal and Horace* tell us, was a *quadrans* (a coin answering to a farthing among ourselves), children below a certain age being admitted, not at half price, but free.

As long as the bath was used merely for the purposes of health and cleanliness, a single daily ablution was sufficient, and two o'clock in the afternoon appears from Martial to have been the usual time at Rome; but as luxury increased under the emperors, the uses of the balnea were extended, and they came to serve as places of meeting, and even of reciting "the last new poem" of every crack-brained and conceited poetaster who gave sufficiently good dinners to collect an admiring audience. A visit to the baths became now, not a mere sudden and temporary gratification, but half a day's pastime, and every art was called into play in order to add zest to the proceeding. Instead of contenting themselves with a single bath of either hot, or cold, or tepid water, the Romans went in succession through a course of baths, in which the agency of air was combined with water. Accordingly, in most of the twenty or five-and-twenty specimens of Roman baths which have been exhumed in England, we find observed the division of the balnea—or thermæ, as they came to be called—into four principal chambers:—(1) the atrium, vestiarium, or frigidarium; (2) the tepidarium; (3) the sudatorium; and (4) the lavatorium; while larger and more metropolitan structures, such as the Thermæ of Titus and of Constantine, added several other chambers, such as (5) the apodyterium, (6) the capsarium, (7) the unctuarium, (8) the conisterium, (9) the coreicum, (10) the exedræ, (11) the latrinarium, (12) the laconicum, (13) the piscina, and (14) the crypto-porticus. Many of these terms explain their own meaning; but it is obvious that the ministrations of luxury must have been taxed to their fullest extent, when the thermæ were so arranged as to contain a series of rooms at graduated stages of heat; when the bather went first into the tepidarium to get warm, and then was sent into the sudatorium to perspire freely, before being handed on to the tender mercies of the slave who presided over the laconicon, and took the final dive into the piscina, or cold plunge-bath, which concluded the ceremony, unless he wished afterwards to take a walk among the poets, philosophers, and literati of the day, in the crypto-porticus, or covered way which surrounded the edifice.

As might naturally be expected, most of the specimens of Roman baths have been discovered at Chester, at Cirencester, at Bath, and in London in a greater or less degree of completeness. Those at Woodchester, near Stroud, are well known to the antiquary, having been laid bare during the last century, and described pretty accurately by Lysons. Those at Wroxeter have only been exhumed within the last five years, and as yet we desiderate Mr. Thomas Wright's long-expected work upon the subject of them. But there are others scattered up and down England, which are well worth a visit from the scholar, the antiquary, and the professional architect. A visit to Bignor, near Petworth, or to the remains at Witcomb, near Cheltenham, or Caerwent, near Caerleon upon Usk, or at Crickley Hill, at the foot of the Cotswolds, would probably give any of our readers a far better idea of what a Roman bath was in the olden time than we could give in half a dozen columns of the *Builder*.

Those at Wroxeter are perhaps the most interesting of all, not only because they have been so very recently discovered, but also because in them the personal trinkets and appendages of the last bathers, including even such things as their hair-pins, their combs, and their strigiles, or flesh-scrapers, were found *in situ*. The thermæ at Caerwent have been already described by Mr. Octavius Morgan, in a work of his own, as corresponding so closely with other baths in the Lipari islands, off the Sicilian coast, that they were probably the work of the same architect. They are almost identical in plan; the arrangement of the chambers in each is the same; both have separate dressing-rooms opening into them from the frigidarium; and both have, what is even more unusual still, two hot chambers, one smaller (and therefore hotter) than the other. We may add, that in the *Archæological Journal* there is a full description of these Liparæan thermæ, from the pen of Admiral Smyth. The baths at Chester (a great part of which it appears is scarcely accessible) seem to be remarkable for a very accurate and spirited fresco on the walls, representing a gladiatorial combat, with the Mirmillones, or Retiarii, and the Secutores pourtrayed to the life. At Wroxeter, still more curiously, the lower part of the bath, probably owing to the water standing in it when the town was overwhelmed, shows no signs of the grey discolouration which is presented by its sides and by the adjoining pavement. At North Wraxall, in Wiltshire, the inside of the hypocaust was found, just as the Romans had left it, covered with a thick coating of soot (which was proved to be from wood fuel), and on one side of the furnace a recess was exhumed which was filled with soot to the depth of more than a foot. These relics of ages long gone by remind us that Herculaneum and Pompeii are by no means the only cities which, dug up from the earth after lying buried for centuries, give us pictures of the daily life of the leaders of those Roman armies which, for good or for evil, crossed over hither from Gallia, and partially at least subdued that barbarous nation whom their poets describe as—

—— *penitus toto divisos orbe Britannos.*

Many of these remains have been described in local journals, or enjoy an immortality of their own in the "Archæologia," or the *Gentleman's Magazine*. Dr. Wollaston has done good service in collecting these scattered accounts into a pleasant and readable volume,—written, no doubt, for the professional object of recommending the Turkish bath as a valuable auxiliary to other medical treatment, a therapeutic agent which ought to be called into play far more frequently than it is in our sanitary crusade against those ills to which human flesh is heir. The only glaring inaccuracies that we observe are those which occur in his classical quotations; but as these are foreign to our plan and purpose, we will pass them by without further notice. Should the work reach a second impression, we hope that Dr. Wollaston will kindly redeem his promise by adding a few illustrations, which he could easily do by the help of photography and chromo-lithography.

WORKMEN'S EXCURSIONS.

We have received accounts of a number of bean-feasts and excursions provided for workmen by their employers, but do not find it convenient to print them. Were we to do so, we should be flooded with further accounts, as on a previous occasion (the practice is fortunately so general), and give offence if we did not insert them. Messrs. Chubb & Son's workmen have had an excursion to Malvern, with a dinner and so forth. The workmen employed by Mr. G. Jennings at the South Western Pottery, had a day's outing at Castle Eve, Upper Parkstone, with racing and games, and appear to have enjoyed themselves fully; while, nearer home, the persons employed by Messrs. Dove, Brothers, Islington, with their wives, 300 in number, dined at the Rye House, Mr. Henry Dove taking the chair. The workmen in the employ of Messrs. Cox & Son, church decorators, held their annual bean feast at Sidcup, in Kent, when a cricket match was a feature, the wood-workers (carvers and joiners) playing against the workers in stone, metal, and painted glass.

Little Casterton Freestone Quarries.—The Little Casterton Freestone Quarries have been bought at public auction by Mr. O. N. Simpson, of Stamford, who is now the sole proprietor.

PROPOSED EXCHANGE, BRADFORD.—*Plan.*

THE PROPOSED EXCHANGE, BRADFORD, YORKSHIRE.

On Tuesday last, Lord Palmerston laid the first stone of the intended Exchange for Bradford, Yorkshire. In arranging the plan of this building, the object of the architect has been to avoid any sacrifice of the expensive and valuable ground on which it has to be erected; and yet, at the same time, to prevent the extreme irregularity of the site from being internally visible. The lines of the intended new and improved streets have also been kept in view.

The principal entrance to the Exchange is under the tower, and is combined with an open arcade, giving a picturesque effect to the approach, and affording also the advantage of a covered outer area during the hours of 'change. The Exchange itself is a large and spacious hall, containing on the floor upwards of 600 yards superficial. The inner parallelogram is surrounded by banded shafts of red polished granite, from the capitals of which spring arches filled in with tracery of Mediæval design, the gable ends being also filled with spandrel windows of appropriate character. The roof will be of open timberwork, with carved hammer-beams and wrought-iron spandrels, the design throughout having a strong constructional character, to which principle the decoration has been made subservient.

The news-room floor is on the same level as that of the exchange, and has an area of upwards of 200 yards. The entrance is from Bank-street, and the Exchange can also be approached from the same vestibule.

The valuable frontage to Market-street has been divided into eight good shops, each having a cellar under and show-room over.

On the upper floor a room for the Chamber of Commerce, 42 ft. by 24 ft., is provided, with a library and secretary's room attached. The remainder of the first-floor and the whole of the second-floor are divided into suites of first-class offices, for which a considerable demand exists. The basement is arched in throughout, and will be let off as wine or other storage vaults. From these several sources a considerable revenue to the company is anticipated. Careful arrangements are proposed throughout for lighting, ventilation, and warming. The estimated cost, exclusive of site, is about 27,000*l*. The design of the building was selected from six sets, submitted in a limited competition, and is by Messrs. Lockwood & Mawson, of Bradford and London.

Lord Palmerston during his stay in Bradford was the guest of Mr. H. W. Ripley, the chairman of the Exchange Company.

Referring to Bradford generally, considerable progress has been made within the last four years. A water supply has been carried out at a cost of three quarters of a million. The sewerage of the town has been commenced under the direction of Mr. Gott, the borough engineer; and an Act of Parliament has been obtained, and another applied for, for effecting great improvements in the present street lines, and for forming new ones of wide and handsome proportions. For acquiring the requisite land to carry into effect the street improvements, arbitrators are now, and have been some time, sitting on behalf of the corporation as claimants, and the several owners of the various properties.

SQUARES OF THE WEST.

To whom do these open spaces belong, is a question that will often present itself to strangers. There is no similarity nor uniformity in their shape or condition; and whether they have been reserved as secluded walks for valetudinarians, or for the adornment of the houses ranged in opposition, is a point not easily determined. Some there are, such as Onslow-square, which inclose fine trees, showing sparsely a few shrubs, and not too great an extent of devious walks: these are so arranged as to give importance and an agreeable view to the surrounding mansions. No great expense is lavished in horticultural embellishment, and yet it answers the purpose of a promenade to the keyholders, and of a pleasing view as regarded by the foot-passengers or residents.

In the flourishing Belgravian district there is a much larger tract of ground, railed about, and margined on three sides by large and fashionable houses, which has also the advantage of some fine-grown and ornate timber trees; and yet this most valuable inclosure presents no characteristic of importance, and is absolutely lost as a distinguishing largo to the surrounding abodes of fashion.

The boundary fence of iron railing is, like most of the old squares, lined by a privet hedge; in parts, grown to a height of 6 ft.; in others, 2 or 3 ft., with chasms, larger or smaller, under forest trees, at intervals. As is usual in our city squares, these are hogged or clipped, running in wavy lines, here towering above the height of rails, thick and impervious at top, scrubbed and straggling at bottom, concealing the view from the opposite causeway; and, at others, revealing the less pleasing portions of the inclosure.

Surely this is a mistake: if there is a hedge, it ought to be uniform; but the screen close to the boundary railing must always conceal that growth of grass, flower, or shrub, which, as viewed from either footways or houses, ought to present that which is pleasing at all seasons—the free growth of a neat, well-turfed, and ornate lawn.

There is one section on the north side of this large reserve which, 'bating only the miserable hedge-row, is not quite so despicable in its condition. The trees are vigorous and full grown; the thorns respectable, and the arrangement of walks not amiss; but for the rest, forest timber, thorns, and many shrubs of venerable standing, are allowed to interlace, overhang, and cripple each other; while long straight alleys, rarely trodden by residents, valetudinarians or recluses, reach from end to end of nearly a half mile range; within and under the drip of the lofty foresters, are long narrow beds of vegetables; then ranges of low glass forcing-frames, heaps of pots, sherds and compost! and snugly ensconced within the thicket of brushwood and scrub, are three mansions, which are barely discernible until autumn denudes the intervening coppice of its vari-coloured foliage. Within the misty depths of these urban wilds there is a Grove of

PROPOSED EXCHANGE, BRADFORD, YORKSHIRE.—Messrs. Lockwood & Mawson, Architects.

Academus, albeit unknown except by the inscription on the gate,—"School of Education!" There is the dwelling of some mystic professor! and what is still more astounding, there is the lodge, the conservatory, and the shop of the florist to her Majesty! There are, it is true, some fine flowers cultivated in Chelsea, near to Cremorne; but only think of floriculture in the heart of Belgravia!

If there is any open space of the west-end that would requite a little expenditure of labour it is this long enclosure, which skirts more than half the length of the great thoroughfare, Sloane-street, and confronts about 180 good houses.

In the smoky atmosphere of central London, it is hard to preserve the rich glow of flowers, and the fresh verdure of grass; still there is an example shown in the Temple garden, the most central of all, where, by the use of the hydropult, both the flowers and grass are maintained in fair condition; and although the turf is more trodden there than in any of the more secluded squares, the watering not only restores and nourishes the herbage, but saves it from being trampled until again dried up.

It is thus that the glowing flower-borders between Hyde Park Corner and the Marble Arch preserve their magical attractions. Some seedlings there are, which are sown and produced on the beds; but the great majority are planted out in the season, and the expense of cultivation and potting out is really not so heavy as might be thought,—the constant watering and attention throughout, by a practised hand, being the first essential. Seeing that miles of flower-border in Hyde Park and Kensington Gardens are kept in brilliant bloom, the condition of the squares generally is most disgraceful. The same attention to planting out, cutting away redundant trees and arborage, thinning and pruning some of the bosquets, renewing others, and above all, well watering the whole, would render the railed-in spaces, dignified by the names of squares, crescents, ovals, or circuses, truly ornamental, as well as more cheering and healthful to our teeming and still increasing population.

A wonderful improvement has certainly occurred since the Commissioners of Woods and Forests have set the example in the parks,—the Regent's, Victoria, Batterses, St. James's, &c. &c.; and a like stimulus has been given to window floral decoration by the extraordinary bloom and luxuriance of the flower-show in Lady Dysart's area and windows in Grosvenor-square. As inciting to refinement in domestic floriculture these are national benevolences; and it only needs to look at the multitudes who haunt the flower walks, and linger there, without harming a bud or leaf, to judge of the happy effect produced thereby; but as an evidence of highly refined and most tasteful floriculture, the Sub-Ranger's lodge in Kensington Gardens excels all.

To reflect upon the comparatively neglected state of nearly all the squares and open spaces is unnecessary, as they need only be contrasted with the precedents given. It is the interest of the inhabitants to make them as ornate as possible: the value of houses in Park-lane has doubled since the old walls were substituted by Elysian borders; and so it would be at every opening where a Llanover garden could be dressed out: it is not the extent of inclosure, but the care bestowed upon it that excites an interest, and there is ample scope for improvement in the widest and best we have: a little circus like Golden-square may become respectable, as Leicester-square is an abomination.

In the parks the neglected condition of the timber trees seems to be overlooked: there are in Hyde Park and Kensington Gardens *twenty trees* dead and leafless, which disfigure all the rest! The timber would more than defray the expense of clearance. Still, there are even dead trees we would not like to see cut down.

MONUMENTAL.

In the Stamford cemetery, a tomb has been erected to the memory of the late Mr. R. N. Newcomb. It has been designed and executed under the superintendence of Mr. J. M. Blashfield, of the Terra-cotta Works, Stamford. The tomb is of Early Norman character, the details being in the style of work of about the commencement of the twelfth century. It may be described as a sarcophagus or square tomb, standing on a marble plinth, 9 ft. long by 6 ft. 6 in. high; the tomb, inclusive of the plinth, being from the base to the summit 6 ft. high. Above the plinth it is 7 ft. 6 in. by 5 ft. at the lower members. The width arises from the tomb covering a double grave. The sides and ends are enriched with panels of dark red polished Aberdeen granite, surrounded by a broad, plain moulding and fillet. The angles of the tomb are cut back into square recesses, in which are placed small columns of polished granite. The shafts of the columns are dark red, and the bases and capitals grey. The design of the capital is from an ancient building in Normandy (circa 1100). The cornice is a bold fillet and hollow. The crowning feature is a cabled corona, from which radiates towards the ends and sides of the tomb a cross, such as is frequently found cut in the cavern tombs of the early Christians. Except the granite panels and columns the whole of the work is wrought out of solid blocks of Canal Bianco marble of a milky-white colour. It is of this marble that the Romans erected their most famous buildings, which have stood the ravages of some 2,000 years. At one end of the tomb, affixed to the granite panel, in brass gilt, are the arms, crest, and motto of the deceased; and on one of the sides, in incised gilt letters, an inscription. The carving of the cross, fixing of the tomb in its place, and formation of the vault to receive the tomb, were done by Messrs. Tinkler & Son, of Stamford.——A monumental fountain is about to be erected at Wolverhampton, in the front grounds of the Orphan Asylum, Goldthorn-hill. The design has been given by Mr. P. E. Masey, of London, and is intended to be executed by Mr. Farmer, of London. The Wolverhampton Waterworks Company have consented to supply the water free of cost. The amount required will be about 400*l*.——It is proposed to erect a memorial of the late Admiral Sir William Codrington, in Gloucestershire. The form of the memorial has not been decided on, but it has been suggested that a window should be placed in Gloucester Cathedral, and also, if sufficient funds be raised, in the Abbey churches of Cirencester and Tewkesbury.——King George of Greece, during his late tour through his kingdom, requested, on his arrival at Missolonghi, to be shown Byron's tomb; and on seeing its dilapidated condition, he gave orders for its immediate repair.——The laying of the first stone of the O'Connell monument took place on Monday, and was the occasion of a great popular demonstration. A procession of enormous length, and consisting of all the trades of the city, was formed in Stephen's-green, and thence marched to Sackville-street, where the Lord Mayor performed the ceremony. In the evening a grand banquet was held in the Rotunda. The demonstration passed off without the slightest disturbance.——At the Licensed Victuallers' Asylum, on the 9th instant, the Prince of Wales unveiled the statue of his illustrious and lamented father, which has been erected within the precincts of that institution, as stated in our last issue.

BIRKENHEAD CEMETERY.

The Church of England portion of the new cemetery at Flaybrick Hill, Birkenhead, has been consecrated by the Bishop of Chester. The cemetery has been formed on land belonging to the commissioners at Flay-brick Hill, the purchase having been effected many years ago for that purpose. It adjoins the great Flaybrick Hill Quarry, where the principal part of the stone for constructing the Birkenhead Docks has been obtained; and this quarry will hereafter be available for any required addition, while it furnishes means for disposing of the refuse from graves for many years to come. The site comprises at present about 21 acres, of which 17 acres are now laid out and appropriated, there being a nearly equal quantity of land that will eventually become available when necessary. The principal entrance is in Tollemache-road, terminating the broad unfinished street, called Bailey-street; and here the registrar's house and office have been placed. The consecrated and unconsecrated chapels stand on a terrace platform near the western entrance from Boundary-road, and are connected by an arcaded corridor, lighted by a clerestory, and intended for the reception of monuments and mural tablets. Over the archway, through the centre of this corridor, are the tower and spire, 120 ft. high, containing the clock and bells, for striking the hours and quarters. There is a peculiarity in the arrangement of the chapels, which has hitherto only been adopted at the Anfield Park Cemetery, Liverpool, by the same architects. The coffins, instead of being placed as usual in the midst of the assembled attendants, have separate aisles provided for them, divided from the chapel by screens of stone and glass. These are subjected to a thorough draught. Each chapel comprises vestry, waiting-room, and other conveniences, and is fitted up with sittings of polished pitch-pine, and reading-desk of oak. The chapels and all the other buildings are in the Gothic style of architecture of the thirteenth century, built of stone, from the Flaybrick Hill and Storeton quarries, the architects being Messrs. Lucy & Littler, of Birkenhead and Liverpool, whose designs were chosen in public competition. The laying-out and planting of the grounds have been executed under the direction of Mr. Kemp, of Birkenhead Park, assisted by Mr. Mills, late town surveyor in the engineering and surveying departments. That portion assigned to the Roman Catholics is almost severed from the rest, being on the western side of the quarry. The chapel is near the latter entrance, and stands on the top of a gentle slope to the westward. The accommodation in this chapel is generally similar to that in the other two, with only such variations as were necessary to adapt it to the Roman Catholic ritual. Its chief external feature is a spirelet on the south-west angle, rising to a height of 80 ft. The contractor for the buildings was Mr. John Middlehurst, of St. Helens; Mr. W. Rimmer, of Bidston, being the contractor for all the earthworks and laying out.

THE SANITARY CONDITION OF HOLBORN DISTRICT.

The eighth annual report of Dr. Gibbon, the medical officer of health for the Holborn district under the Metropolis Local Management Act, has been printed. According to this report, during 53 weeks of the year ending Saturday, January 2nd, 1864, 1,423 births and 1,279 deaths were registered in the Holborn district. In all London the average death-rate was 24·5, but in the central districts, of which Holborn is one, the average rate was 26·6, so that there was a mortality of two deaths less in every 10,000 of the population than in the adjoining districts, and 18 per 10,000 more than in the whole metropolis. During the past two years the death-rates have been enhanced by two epidemics, low fever which carried off 92 persons in 1862, and small-pox, which was accountable for 36 deaths in 1863. In the Holborn district, 1,224 of the deaths were thus distributed:—196 in the St. George the Martyr and the St. Andrew's western sub-district, 321 in the St. Andrew's eastern, 258 in the Saffron-hill, 25 in the liberty of Glass-house-yard. These are in the proportion of 20·4 per 1,000 of the population of the first-named district, 25·7 of the second, 21·4 of the third, and 17·8 of the last. These rates are only relatively correct: to be absolutely so they require to be increased by 80 deaths that occurred in the out-lying hospitals, and 151 in the union workhouse. The liberty of Glass-house-yard still maintains the pre-eminence in salubrity. The report contains some useful remarks on overcrowding, and also on consumption and other tubercular diseases, which Dr. Gibbon rightly, we think, attributes mainly to want of pure air and direct sunlight.

PADDINGTON SURVEYORSHIP.

A correspondent writes thus:—"Some seven weeks since the Paddington Vestry advertised in your pages for a surveyor, and referred the candidates to their offices for particulars. After receiving the necessary information appertaining to the duties, &c., of the proposed office, together with the assurance, in reply to my query, that it was a perfectly open election, I, sir, became candidate for the office of surveyor, with some twenty others; and after waiting the time above indicated, we received a circular, dated 2nd instant, 'That they have this day made arrangements with their existing staff of officers, so as to render the appointment of an additional surveyor unnecessary.' Now, sir, if the gentlemen of the Paddington Vestry possess proper qualifications as representatives of the system of local self-government, they ought to have discovered that their 'present staff of officers' were competent to undertake the duties of surveyor before advertising; and, not considering their own expenses, have thought of those of others, whereby twenty gentlemen have to trouble their twenty friends on their behalf needlessly."

THE AGE OF TREES.

It *was* (I should rather say *is*) a generally received opinion that in order to ascertain the age of any tree, when felled, it is only necessary to take a transverse section and count the number of (*annual*) rings. When writing my work on "British Timber Trees," which was published in 1859, I had examined so many trees whose ages were pretty accurately determined, that I knew no reliance in most cases could be placed on the method of counting the rings to ascertain the age. And, although in opposition to men older and better acquainted with the subject than myself, I could not altogether pass over the matter in silence, and at page 4 (First Edition) is the following observation on the subject:—"By counting the number of these so-called annual rings, which are very distinct in some species, it is supposed the age of the tree can be ascertained; but we are inclined to doubt this hypothesis, when we consider the immense number of these rings in some trees which bear no comparison to the time they may be supposed to have been growing." As corroborative of the accuracy of this statement, I read the following in the *Times* in the review of Mr. Wm. Menzies's great work, "The History of Windsor Great Park and Windsor Forest:"—"Having obtained permission to fell two or three trees in each plantation about which he entertained a doubt, he planed the stems smooth and counted the rings. When, however, he came to test this method of cutting down trees in plantations whose age was ascertained, he found that between trees whose ages varied one or two centuries there was perceptible only a difference of four or five years."

J. Blenkarn.

MEMORIAL TABLETS.

MRS. SIDDONS.

On the front of a house called the Siddons' Arms, in the town of Brecon, South Wales, there is a marble tablet fixed to remind the passer-by it was in that house the celebrated Mrs. Siddons, the tragedian, was born; and often with pleasure from my childhood have I looked up to it. I should like to be reminded in the same way of celebrated personages in London. W. D.

THE STRAND.

Let me call the attention of all whom it may concern, and who are earnest in their desire to benefit the public thoroughfares, to the east end of the Strand, beyond Somerset House, to Temple Bar, where extensive new buildings are being erected on the old sites of the very obnoxious and disreputable streets which disgrace this neighbourhood, and flank that part of the Strand known as Holywell- and Wych-streets, where an enormous building for a modern hotel company is fast rearing its gigantic proportions to the very extent of the former outlines of frontage in these narrow streets, in which *no two vehicles can pass*; and with the further intended encroachment upon free air and headway of uniting the front portion of the hotel which is to face the Strand at the corner of Newcastle-street with the main building, which abuts on Wych-street, with a communication at the level of the first-floor, thus confining the already fœtid and polluted purlieus of Holywell-street into an arcade.

Surely it would be better to clear all the block of houses from the south side of Holywell-street to the Strand, so as to widen this great thoroughfare to the same width as at Somerset House, and ultimately remove the "New Church," as it is called, from its present site to Broad-court, Catherine-street and Wych-street, thus widening it opposite the Olympic and the entrance to Drury-lane, and removing all the obnoxious houses of that locality; and by the houses being set back from Pickett-place to Chancery-lane, and the Temple Bar removed and placed as entrance to the proposed new Law Courts, a permanent benefit and relief to this crowded thoroughfare would not only be effected, but healthful air admitted to this "stench-trap" of London. This, and the removal of that blot of disgrace at Holborn Bars, which during the last forty years has been almost (*all*, progressively) rebuilt, requires only your very powerful aid, by exposure, to enforce these improvements being effected.

R. H. H.

SANITARY WORKS IN BOMBAY.

Seeing in the *Builder* of the 21st of May last a letter on the subject of "Sanitary Arrangements in India," I think it may be interesting to some of your subscribers to know what is at present being done in Bombay with a view to improving the sanitary condition of the island.

People are mistaken who suppose that deficient water-supply is the cause of the unsatisfactory state of sanitary works here. The great difficulty in the matter of rainfall is the unequal supply; for during the monsoon months a rainfall of 1 in. per hour and more has to be provided for, while for six months in the year not a drop of rain falls to assist in increasing the depth of flow in our large and filth-laden sewers; for large they must be to carry off the monsoon waters.

Fortunately, however, the authorities are not afraid of the task before them, but are already at work in earnest, carrying out an improved system of drainage. They have lately experienced a great loss in the death of their engineer, Mr. W. Tracey. Subsequently the following appointments have been made: — Mr. H. G. Wilcox, to be executive engineer to drainage, vice Mr. Tracey, deceased; Mr. T. A. Bulkley, assistant engineer, to be acting engineer to drainage works, vice Mr. Wilcox, on sick leave.

Another disadvantage of the unequal rainfall is, that during the monsoon anything in the shape of out-door work is much hindered.

But, where I anticipate the authorities will find the chief cause of the "unsatisfactory state of sanitary works in India," will be in the great objection which natives have to any sort of reformation in their house arrangements. I fear that, unless legislation interferes in the matter, it will be a long time before Hindoos are sufficiently educated to perceive the advantages of Mr. Jennings's manufactures. At present they certainly prefer filth and disease to efficient drainage and good ventilation.

Bombay. A Subscribing C.E.

THE HEALTH OF WATERING-PLACES.

I read an article in your paper recently on a most important subject, viz., the condition of health in watering-places. It is there proposed that the death-rate should be placed in some public place, such as Somerset House. Now the death-rate of a town would be no criterion unless the circumstances of the locality are known. Take a town like Whitby. The old town is situate in a narrow valley, and inhabited by a poor population in a very narrow street; consequently the death-rate may be high; but no visitors reside there. The lodging-houses are 200 ft. above the sea, standing on a plateau quite distinct from the town. Folkestone is very similarly situate. The visitors' houses are on a chalk cliff to the east of the town,—an important point, as the prevailing winds are westerly, driving the malaria that might arise from the harbour away from the visitors' houses.

The real cause of fever in seaside towns is the deficiency of town drainage. Why should not Brighton be compelled by Act of Parliament to do away with cesspools? This has been effected in London. Cesspools ought to be abolished at once in towns of 20,000 inhabitants.

The interiors of the houses are not easily dealt with. Cesspools are universal; badly constructed W.C.s; bad, if any, traps to the drains generally; and a great deficiency in the water-supply. The owners of these lodging-houses are for the most part poor. They only care for a rapid succession of lodgers; and, being yearly tenants, they have no interest in maintaining the houses in a good condition. The landlords are small tradesmen, who are but little disposed to spend their money as long as they can get a tenant.

A Sea-side Visitor.

A REFUGE FOR DESTITUTE BOYS.

The good resulting from the ragged schools has been great, but still something more was necessary so that homes might be provided for houseless boys, where they might learn habits of industry and morality, and eventually be saved from wreck and ruin, and be made useful members of society. To meet this want the Whitechapel Refuge was established, and since its opening 700 boys have been received within its walls. The results have been satisfactory. Of those who have passed through the training here, a considerable number have been sent to sea; more than one-seventh of the whole have been bound apprentice, going out not altogether unskilled. Another seventh have been provided with situations without being apprenticed; being old enough to earn wages at once: some have found their way into her Majesty's service: some have gone abroad: others have been restored to their friends, in the hope that the boys would prove a help rather than a hindrance. The Government has withdrawn the very moderate grant which was made as a contribution towards their support, and this has caused much difficulty in several of these homes, which are the means of saving many from the metropolitan prisons, and relieving the country of far more cost than the small pecuniary assistance which was afforded; and, in this instance, the grant of 200*l.* from the imperial exchequer had been a great aid; but this having been withdrawn, the committee could not turn out any of their 120 inmates, and were obliged to apply for voluntary subscriptions to make up the deficiency.

In the course of recent proceedings, the Earl of Shaftesbury said he had no doubt that the refuge had been productive of the most useful results, and the only deduction he could draw was that, seeing the great benefits arising from such institutions, they ought to exert themselves earnestly to multiply their number all over the country. It has been calculated lately that there were 30,000 children roaming about in the metropolis without any one to care for their mental or physical condition; and, from much personal observation, we believe that these terrible figures are under the actual extent. Lord Shaftesbury truly said that those children were the seed-plot of crime,—which it became the more imperative that we should deal with thus at its commencement. His lordship said, that during his lifetime he had had much to do with London thieves and burglars; and, in the course of conversation with them, he had heard but one opinion expressed, that, if the system of ragged schools and refuges was fully carried out, it would put a stop to the supply of youths for criminal occupation. These remarks apply to the large provincial towns as well as to the metropolis. The life of crime is a miserable one; and a majority of those who have been brought up in it would gladly, if they could, turn to other pursuits.

SANITARY MATTERS.

Margate.—A report on the sanitary condition of the town of Margate has been published by Mr. E. Mottley from statistics collected by the Board of Health, and also by the committee of medical men at Margate summoned by the mayor to make investigations as to the cause of the great increase of deaths among the inhabitants, visitors, and inmates of the Infirmary at Margate. The report is filled with comparative tables showing the increase in deaths of late in Margate compared with previous years, and also compared with other towns.

Sunderland.—The health of the borough of Sunderland has never probably been in a more satisfactory state than during the quarter ending June 30th. The Registrar-General's report of the births and deaths in England and Wales for the past quarter, just published, shows that the average mortality of town districts was at the rate of 23·69 per annum to every 1,000 living, while that of the country districts was 21·10 per 1,000. Now, the deaths in Sunderland being 473 in the quarter on the present population, which, allowing for the increase of births and deaths, amounts to 96,000, the rate is only 19·87 per 1,000, 2·23 less than the country districts, and 4·82 per 1,000 less than the average of the town districts, a very important difference, placing Sunderland in the first rank amongst the large towns in the kingdom.

Cockermouth. — The chairman of the local Board has received from Mr. Lawson, C.E., his estimates and opinions as to the various schemes for supplying the town with water. Mr. Lawson, in his report, says that the question of water-supply was considered as one of pumping from the Derwent *versus* gravitation; and after capitalizing the annual cost of pumping, it was shown that, so far as the works were concerned, the gravitation scheme would be the cheapest. He has taken into consideration four schemes of water-supply, viz.:—1. Wythop (gravitation); 2. Cocker (pumping); 3. Derwent (pumping south side); 4. Derwent (pumping north side). Mr. Lawson thus concludes his report:—As a principle, I prefer gravitation to pumping at equal cost. In this case the cost will be less,

and therefore if there is a certainty as to quantity of water, and if the Board are able to arrange with all parties interested in the water to be taken, and in the lands to be passed through, I recommend that the Wythop brook gravitation scheme be carried out. Failing this, I advise the Board to adopt the Cocker pumping scheme if satisfactory arrangements can be made for the necessary land; and if this cannot be done, then, certainly, as the most expensive, but at the same time as a scheme which will insure at all times an abundant supply of pure water to the town, I recommend the Derwent scheme, the reservoir being placed near Parkhouse.

Local Boards of Health.—It has been decided by the Court of Common Pleas, in the case of *Burgess* v. *Peacock*, that a Local Board of Health has no power under section 34 of the Local Government Act, 1858, to make a bye-law relating to buildings erected before the date of the constitution of the district, and to the closing of such buildings when unfit for human habitation and to the prohibition of their use for such habitation.

THE VENTILATION OF RUSSELL COURT.

A correspondence on the subject of a blind let down at times over the entrance to Russell-court, in Brydges-street, Drury-lane, by the occupier of the adjoining shop, is before us; and the objection made in it that the blind interferes with the ventilation of the court is backed up by correspondents. Mr. J. F. Lewis, clerk to the Strand Board of Works, replies to a letter from Mr. Dangerfield, the vestry clerk, on the subject,—

"I am directed to inform you that on inquiry my Board find that the said sun blind has been in use for more than twenty years past, and is only used during three or four of the hot summer months, when the sun in the middle of the day seriously affects Mr. Sayer's shop; and my Board totally disagree with the assertion that any injury is caused to the ventilation of the court by the use of the sun blind as above mentioned."

Of the first part of the reply we say nothing, though its truth is denied by an inhabitant of the court; but the second part is so obviously erroneous, that we can scarcely suppose the Board know the spot. The ventilation of the court, well known to us, is at the best very imperfect,—hurtfully so to the pent-up inhabitants of it,—and any further stoppage of its narrow outlet and inlet ought to be prevented on public grounds if possible. We imagined the Strand Board of Works was a Board of Health.

GAS.

The Banbury Gas Company have declared a dividend of 7½ per cent. for the past year, free of income tax; the Newcastle-under-Lyne Gas Company one of 10 per cent. for the past year, with a reduction in price from 5*s.* to 4*s.* 6*d.*, and a promise of further reduction. The Alcester Gas Company have also held their usual meeting, and have declared a dividend of 6*l.* per 75*l.* share. The Taunton Gas-light and Coke Company have declared one of 8 per cent. for the past year; and the York Gas Company one of 10 per cent. per annum for the last half-year. The Worcester Gas Company have declared a dividend at the rate of 10*l.* per cent. per annum for the last half year. The Malton Gas Company have declared one of 7½ per cent. per annum for the past year.——A new Company has been registered and incorporated under the title of the Knutsford Gas and Water Company, Limited. Negociations are in progress for the purchase of the works of the present water company; and should the old gas works, which are now in private hands, not be obtained on fair terms, new works of the most modern construction, it is promised, will be erected, so as to ensure to the consumers gas of the best quality that can be produced, and at charges that will be satisfactory to the consumers.——The directors of the Wisbech Gas Company have agreed to recommend a dividend of 8½ per cent. on the year ended 15th June. The price of gas, for prompt payment, is now 4*s.* 6*d.* per 1,000 cubic feet, and the quality is considered to be very good. The use of gas is rapidly extending in private houses, so that every year the company's income is increasing, and there is little doubt it is thought that the dividends will ere long be 10 per cent. ——The directors of the Kirkcaldy Gas Light Company have agreed to reduce the price of gas from 4*s.* 2*d.* to 4*s.* per 1,000 cubic feet. At the annual meeting of the company the balance-sheet showed a profit of about 28 per cent. on the capital, which amounts to 6,500*l.* The dividend on original shares was 14½ per cent.—— The Elgin Gas-light Company, at their thirty-fourth annual general meeting, have declared a dividend of 6 per cent.

THE BUILDING TRADES MOVEMENT.

Plymouth.—Some regulations having been agreed to for the formation of a sick club fund, the masters were requested by the men to deduct such payment from their earnings. The rule enjoining this payment upon the masons has been objected to by some of the society's men, who have ordered a strike till the wording of the regulations be altered.

Manchester.—A deputation from the joiners of this city had an interview with four of the employers, and agreed to split their differences and end the dispute, which had assumed a rather threatening aspect. The strike, therefore, came to an end, and the men resumed work on the understanding that their wages were to be raised from 28*s.* to 30*s.* per week, the first payment at the latter rate to be made on Saturday, the 1st of October next,—equal to a notice of three months.

Bradford.—The carpenters and joiners at Bradford struck work on Monday, but the strike terminated on Wednesday night by the masters yielding to the full demand of the men. They received an advance of 1*s.* per week a month ago, and the reduction of 3½ hours' work per week is equal to another addition of 1*s.* 6*d.* per week.

Alloa.—The operative masons of Alloa have struck work for an advance of wages. The men had given notice to their employers that they wished to have 5½*d.* per hour instead of 5*d.*, and as, to this demand, the masters gave no reply, their silence was looked upon as equivalent to a refusal.

RAILWAY COMPENSATION FOR A PUBLIC HOUSE.

Higgs v. *Metropolitan Railway.*—This case was tried at Guildhall, before Mr. Kerr, of the Sheriffs' Court, and a special jury.

Mr. Serjeant Parry, in opening the case for the claimant, said Mr. Higgs was the proprietor of the Flying Horse, situate in Milton-street, Finsbury, a few doors from Fore-street. The premises were held on lease for an unexpired term of thirty-seven years, at 65*l.* per annum. The question for the jury was, what sum as compensation should be paid by the railway company for possession of the premises.

The statement of trade payments having been agreed to on the other side, the learned serjeant called

Mr. Phillips, auctioneer, who said, after deduction of the outgoings, it left a clear annual balance which, calculated at five years' purchase, would make the lease and goodwill to be worth 2,500*l.*

Mr. Walter Knight stated that the payments in trade having been admitted, the profits, calculated at 50 per cent., would show an annual profit of 608*l.*; and, after deductions, with a calculation of five years' purchase, the value would be 1,810*l.*

This witness, in cross-examination, admitted the premises to be out of repair, and he was fully prepared to allow 150*l.* from the valuation on that head; and, allowing 10 per cent. for compulsory sale, his estimate would be 1,826*l.*

This was the case for the claimant.

Mr. Cooper said, in reply, he was in a position to prove that the valuation of the claimant was entirely erroneous.

Mr. Self, of the firm of Self, Son, & Hill, stated his opinion that the property was worth 730*l.*, calculated at three years' purchase.

The difference of valuation arose principally from the fact of Mr. Self having deducted from his valuation certain accounts for goods consumed, and also by increasing the out-goings.

Mr. Lovejoy, of Chancery-lane, adopted the same view as Mr. Self, with the exception of allowing five years' purchase, and made his valuation of the property 900*l.*

The Jury gave their verdict for 1,820*l.*

GUARANTEEING WORKMEN AGAINST ACCIDENT.

Penney v. *Reed.*—An action, described by the judge as one of a novel character, to recover damages for a serious accident to the plaintiff, has been decided by Mr. Justice Willes. The plaintiff's declaration contained two counts, one upon an alleged agreement to guarantee or indemnify the plaintiff if he should meet with injury during his employment on a particular piece of work for the defendant, and another count imputing to the defendant negligence.

The plaintiff had been employed by the defendant to dig the foundation of a house; and, as the soil was loose and sandy, plaintiff told the defendant of this fact, and thereupon, as plaintiff alleged, the defendant urged him to proceed, saying,—"It's all stuff: I'll guarantee it will stand. You go on." The plaintiff went on with his work accordingly; and, in the progress of it, the sides of the earthwork fell in and seriously injured him.

On the part of the defendant, it was denied that there was any such guarantee as had been spoken of; and it was also alleged that the plaintiff did not sufficiently slope the ground, and that he was provided with timber to shore up the sides but did not make use of it.

After a long inquiry, the jury returned a verdict for the plaintiff, with 25*l.* damages.

COMPENSATION FOR ACCIDENT.

"You can't do better than be interested in some lime-works anywhere down about Northfleet," says Mr. Inspector to Mortimer Lightwood in "Our Mutual Friend." But this may fairly be doubted when you happen to be defendant in an action for damages similar to one tried before Mr. Baron Martin, at Maidstone, on the 28th of last month. In the case to which we refer (Gay *v.* Knight and Another), Mr. Joseph Gay, a brick-maker at Northfleet, near Gravesend, sued the defendants, Messrs. Knight & Bevan, who are large Portland cement manufacturers at the same place, for the damage caused by the fall of part of the side of a chalk-pit adjoining the land in the occupation of the plaintiff. It appeared from the evidence of the plaintiff that he had excavated a large pond or "back," about 7 ft. deep, which extended to within 6 ft. of the defendants' ground, which he filled with washed earth for the purpose of making bricks. This "back" was cut down to the top of the chalk, and was not puddled. There was some conflict as to whether the chalk-pit had been dug before the excavation of the "back." The plaintiff alleged that it had not been dug, but the fact was not very important. At the close of last year, at any rate, the defendants' chalk-pit had been excavated to within 6 ft. or 7 ft. of his boundary fence, the sides of the pit, as is usual, being worked to a nearly perpendicular face. A few days before Christmas in last year, after some previous warnings in the shape of cracks, the bank of the "back" next the chalk-pit gave way and fell over into the pit, and a quantity of washed earth, in a semi-liquid state, ran away at the same time. It was for this occurrence that the plaintiff claimed compensation. For the defence it was alleged that the defendants were not liable, as they had worked their pit in the usual manner, leaving a slope of about 1 in 10; and the accident was caused by the presence of a number of faults in the chalk, technically called "pot-holes," which are funnel-shaped spaces, filled with gravel, running down deep into the chalk (several of which were shown to exist at the point the accident occurred, extending on to the plaintiff's ground), through which the water in the plaintiff's pond had drained away, and a frost supervening, the chalk had fallen down and caused the injury complained of. Professor Ansted was called for the defence, and gave his opinion that the water had insensibly percolated the chalk through the "pot-holes," and that he could not account for the slip upon any other hypothesis; and Mr. George Williams gave similar evidence. The judge told the jury that the plaintiff was clearly entitled to the support of the adjoining soil, and it was not a question whether the defendants had worked their pit negligently or carefully, as they were equally liable, provided it could be proved that it was their act that had caused the accident. The jury found for the plaintiff for the amount claimed, viz., 168*l.* Counsel for the plaintiff, Mr. Lush, Q.C., Mr. Hawkins, Q.C., and Mr. Lumley Smith; for the defendants, Mr. Bovill, Q.C., and Mr. Maude.

COMPETITIONS.

Birkenhead Albert Memorial Ragged Schools.—Mr. William Jackson, M.P., some time ago expressed his intention of presenting the town with a sum of 5,000*l.*, and a site for the erection of ragged schools, as a memorial of the late lamented Prince Consort. Designs were invited by the committee, to which twenty-three architects responded, and this has resulted in Mr. David Walker, Liverpool, obtaining the first premium; Mr. James Fisher, Birkenhead, the second; and Mr. Walter Scott, Liverpool, the third premium. The building, we understand, is to be commenced immediately, under Mr. Walker's superintendence.

Hexham.—Sir,—I have just seen in your publication that a competitor for the new town-hall, &c., here, is anxious to know what has been decided with reference to the premiums, and that another correspondent has been informed that the best design has been selected, and that it (in violation of the conditions) is coloured. Perhaps you will allow me space to state that a design by Mr. Johnston, of Newcastle, has been selected for the first prize, but that as one of the conditions of the competition required that proof of the cost should be furnished, the directors have not yet obtained that proof. Mr. Johnston, whether in violation of the rules of the competition or not I must leave it to the profession to decide, exhibited coloured perspective drawings, exterior and interior, with his plans, but at the same time he also furnished elevations in sepia.

J. Oswald Head, Secretary.

Sligo Town Hall.—A special meeting of the

town council, with the town and harbour commissioners, was held for the purpose "of receiving the report of the committee appointed to examine the different designs for the town hall, and select three of said designs according to advertisement." The report from the committee appointed to select the designs stated that, "It was resolved that the committee select the following for consideration, namely, No. 2, 1st plan; 3, plan B, 4, 6, 9, 14, 16, 19. That the committee consider it would be most desirable that all plans should be inspected by Sir John Benson, in order to obtain his opinion thereon, and that they recommend the corporation to engage his professional services for that purpose, and in the meantime that the mayor be requested to write to Sir John Benson to ascertain whether he is willing to accept the office." The meeting having ascertained that Sir John Benson would be willing to give his professional services, adopted the committee's report, and retained Sir John's services in the inspection of the plans.

Chester Town-hall.—We are asked to mention that the design "Love's Labour" was submitted by the firm Lanyon, Lynn, & Lanyon, and not by Mr. Lynn alone.

PROVINCIAL NEWS.

Brighton.—In speaking of the public works in progress at Brighton at present, the local *Herald* says, that never in the history of Brighton has there been such an extent of work of a public character in progress as at the present moment. The Junction-parade Outfall is on the point of successful completion; the widening of the Junction-road and the King's-road, from the entrance to the Chain Pier to the Old Ship Hotel, is proceeding rapidly; considerable improvements are being made in the King's-road, on the old Battery site opposite the Grand Hotel; the West-end Pier is rapidly progressing; the Norfolk Hotel and Club-house is in course of re-erection; the Grand Hotel is just completed, and on the point of being opened; the Pavilion is being repainted and decorated inside and out; three new groynes are in course of erection between the Chain Pier and Black Rock, with a view to widening the beach and forming a lower esplanade in front of the Marine Parade-wall, and some of the other groynes in front of the town are being heightened and extended; a public laundry, on a very large scale, is being constructed in the north part of the town, by a company formed for the purpose; a new church of the Establishment has just been opened at Cliftonville; a new Roman Catholic church, in Upper North-street, is nearly completed; large schools are being erected in Belgrave-street, by the Rev. Arthur Wagner. These are given as only a few of the more important works on hand.

Romsey.—The new Corn Exchange building has been commenced, and will, we believe, be completed by October, so that the farmers will be able to enjoy its shelter in the coming winter. The contract is taken by Messrs. Bull & Son, of Southampton, for 1,300*l.*

Coventry.—Lord Leigh, Lord-Lieutenant, and Provincial Grand Master of Warwickshire, will lay the foundation stone of the Coventry and Warwickshire Hospital, with Masonic honours, on the 9th of August. The hospital is in course of erection by Messrs. Nevill & Son, of Coventry.

Weston Point (*Cheshire*).—Mr. Pilling, of Bolton, contractor, has undertaken to contract for the construction of the intended docks at Weston Point, which will, it is expected, be proceeded with immediately. The cost is estimated at about 60,000*l.*

Bacup (*Lancashire*).—The local Board have determined upon the erection of a commodious market-house, at an estimated cost of 5,000*l.* The plans, prepared by Mr. Brierley, of Blackburn, embrace a clock-tower. A complete system of sewerage and street improvements, to cost about 15,000*l.*, is also being carried out for the Board by Mr. Brierley.

Stockport.—A new bridge is being erected over the river Mersey, on the estate of Mr. C. Howard. It is in one arch of 70 ft. span and 15 ft. rise. Estimated cost, 2,000*l.* The contractors are Messrs. Thackrah & Pierce, of Stockport. The engineer is Mr. Brierley, of Blackburn.

Newcastle-upon-Tyne. — Plans have been prepared for the Council by their surveyor, Mr. Lamb, for a new police-office, the erection of which is estimated to cost 5,000*l.* The present Manors Police Station is the proposed site.

IRELAND.

Cork has just had a visit from some of the Lords of the Admiralty, including the Duke of Somerset, with the view of reporting on the construction of a naval dockyard in the harbour at Queenstown; a committee of the Commons having reported in favour of such a dockyard.—— Extensive improvements have been made at the Victoria Hotel here. A wing of the hotel, with many suites of apartments, has been rebuilt and expensively fitted up. A commercial room has been lavishly decorated by Mr. Murphy, of Cork. The room is 50 ft. long, 16 ft. high, and 20 ft. wide. The decorations are chiefly in green, pink, drab, white, blue, crimson, cream, lavender, and gold, with cornices, bases, and pillars in various colours. The other fittings in the room are arranged in a corresponding style of elegance. A coffee-room for the special use of ladies has recently been also added to the hotel. Its dimensions are, — length 70 ft., width 20 ft., and height 16 ft. The gentlemen's coffee-room is also 70 ft. long, 50 ft. wide, and 16 ft. high.

The Dean and Chapter of St. Canice's Cathedral, Kilkenny, met on Thursday week, for the purpose of considering tenders and entering into a contract for the new roofing of the cathedral—the first step to be taken in the general work of restoration some time since resolved upon. The competition was limited, but there were several tenders, and that of Messrs. Cockburn & Son, Dublin, being considerably lower than any other, was accepted at 4,500*l.* The work is to commence at once. The architect is Mr. Thos. Newenham Deane.

The erection of the Drogheda new cotton factory has been contracted for by the local firm of Messrs. A. & N. Hammond. Numerous tenders were sent in.

It has been decided to revise the plans for the new lunatic asylum for county Down, in order to effect reductions in the cost of the building, and that contractors are to be invited to send in fresh tenders. The lowest of those received for completing the asylum, according to the original plans and specification, was for 47,000*l.*, while the highest ranged up to 70,000*l.* The committee seem to have considered the sum named in the lowest proposal too much,—a view in which the grand jury coincided; and Mr. Smyth, the architect, was requested to remodel his specification, so as to reduce the cost; and he has arrived at the conclusion that he will be able to make alterations in the specification, which, taking as data to go upon the figures in the lowest tender, will admit of a reduction to the amount of 10,000*l.* or 12,000*l.* The alterations will not, he says, so change the general character of the original design as to give in its place an establishment materially defective and unsuitable for the public wants, but the asylum will be deficient in many modern improvements, which is much to be regretted.

CHURCH-BUILDING NEWS.

Islington.—The new district church of St. Michael, Bingfield-street, Caledonian-road, has been consecrated. The church is built to accommodate about 750 persons, and its site, with an endowment of 200*l.* per annum, was provided by the will of the late Mr. John Randell. There are 400 free sittings. The cost of the edifice was about 3,000*l.* It is built of brick, with stone dressings. The exterior is very plain, but the interior is of brick and stone, with a large proportion of variegated brickwork in the arching. It has a gallery at the west end for children. Mr. R. L. Roumieu was the architect, and Messrs. Dove, Brothers, were the contractors. The towers have only been carried up porch high.

Newland (*near Great Malvern*). — The new church connected with the Beauchamp Almshouses has been consecrated. The site of the new foundation is about eight acres, near the old timbered church of Newland. The buildings form three sides of a quadrangle, the fourth being open to the south, commanding a near view of Malvern range. A large garden occupies the open space of the quadrangle, surrounded by terrace-walls. The north and west sides of the square consist of the almshouses. The church is at the north-east angle; and the east side of the square is a covered wooden cloister (temporary, but hereafter to be of stone and brick) connecting the church with the residence of the chaplain to the establishment; and there is close by this residence a board-room 35 ft. by 18 ft., having an open timber roof. Domesticated Gothic is the style in which the buildings are erected, with brick for the walls, Bath-stone dressings, ornamental barge-boards to gables, and twisted chimneys. The church, which is dedicated to St. Leonard, is in the Early Decorated style, having a chancel, chancel aisle with vestry, nave, north door and stone porch. There is also a porch on the south side of the chancel aisle, forming a kind of campanile, underneath which the almspeople will pass from the cloister into the church. An organ by Mr. Nicholson has been placed at the east end of the south aisle. The chancel has been arranged after the manner of collegiate churches, as set apart for the body attached to the establishment, the almsmen to occupy the chancel, the women the aisle adjoining, and the parishioners generally the nave. The present seats in the chancel are only temporary, and oak stalls will be provided: for the nave there are chairs. The columns to the arcade which divides the chancel aisle from the chancel are of Pyrenees marble, polished: the bases, bands, and caps are carved in alabaster. The marble was presented by Mr. G. Skinner, who brought it from Italy. The north and east walls are lined with bands of Mansfield stone, alabaster, and different coloured marbles. The marble work was done by Mr. White, of Westminster. There are about 230 sittings. Bisley rubble, with brick lining and Bath-stone dressing, are the materials used in the church. The nave is 49 ft. 6 in. long by 24 ft. wide, and roofed with open timbers. The chancel is 40 ft. long by 20 ft. 6 in. wide. The cornices and brackets supporting the open timber roofs are well carved. Mr. Purdy, of Gloucester, was the carver. There is a stone reredos, representing the Crucifixion, by Mr. Boulton, the figures being in high relief. Lady Beauchamp gave the east window, in memory of her husband, the founder: it is by Hardman, and in its three lights and geometrical tracery is represented Christ in glory, adored by Thrones, Principalities, and Powers, the angelic host playing an instrument of music. In the north wall of the chancel are two windows by Messrs. Clayton & Bell, presented by members of the Skinner family: Saints Simon, Elizabeth, Mary, &c., are depicted. Cathedral glass fills the nave windows, and at the top of the west wall is a wheel window. Beneath this window, and close to the S.W. angle of the building, is a large projecting oriel or bay window, opening into the church from the sick ward of the establishment, and which is so arranged that the patients can hear the service in the church without the fatigue of going there. This oriel is supported by a marble shaft on a bracket, and around the base of the window are represented the acts of mercy, Christ healing the Sick, &c. The chancel arch is supported by marble shafts sinking into the wall, and on the western face of the stone screen dividing the chancel from the nave are sunk panels, with incised figures of Temperance, Fortitude, Justice, and Prudence, and the screen is enriched with specimens of Californian and Belgian marble. The ancient Norman font (circular and cylindrical) from the old church has been placed on a new base of steps at the west end. The church is heated with hot water. Both chancel and nave have been covered with encaustic tiles, by Mr. Godwin, of Lugwardine. The spire is crocketed on the angles and canopies so as to destroy its outline. The principal entrance to the almshouses is from the north, fronting the Worcester road, by an arched gateway. A porter's lodge opens into the gateway, and within the quadrangle on the east side between the gateway and the church there are the matron's apartments, with dispensary attached. West from the gateway are the almshouses. The rooms for the single men are in the south wing, for the single women in the north wing, and for families in the west. The rooms for families or married couples are similar in plan to the other, with the exception of being a little larger. The entrance-hall is open from the quadrangle, with side doors to the basement set of rooms, and a staircase leading to those above. There is one entrance, porch, and yard, for each group of four residences, as also a workshop, bakehouse, and washhouse, in common. Infirm inmates will live down stairs, and the hale ones in the upper story. Provision is made for comfortably supporting sixteen single persons and eight married ones, and of these latter it is stipulated in the will that the wife must not be under fifty years of age, the age of the husband being fifty-five. For each occupant there are a sitting-room, bed-

room, and kitchen, those rooms for the married being made rather larger. Mr. Hardwick, of London, was the architect, and Mr. O. Estcourt, of Gloucester, the contractor. The entire cost of the establishment, including the church, carvings, reredos, and screens, but excluding the furniture for the almshouse people, gas, grates, &c., will be nearly 17,000*l.*

Cononley (*Yorkshire*).—The consecration of a church and churchyard took place in this village on St. James's-day. The church is a small edifice, in the geometrical style, and situate on rising ground above the village. It is calculated to accommodate 220 persons, all free. The architect was Mr. F. H. Pownall, of London, and the builder Mr. R. Sugden, of Keighley.

DISSENTING CHURCH-BUILDING NEWS.

Tollesbury (*Essex*).—The chief stone of a new Congregational Chapel has been laid in this village. The building, which partakes somewhat of the Romanesque in character, will occupy the site of the old chapel, and will adjoin the present school-room. The building is a parallelogram, the internal dimensions being 68 ft. by 37 ft. 6 in., and 30 ft. in height. In the rear of the chapel are the deacons' and minister's vestries, in contiguity with which it is intended to erect the minister's residence. The walls internally will be stuccoed with moulded strings and archivolts over doors and windows: the roof timbers will be partly visible below a semi-hexagonal plastered ceiling. The whole of the timbers, benches, and woodwork, will be stained and varnished. Externally, the building, which is now 18 feet above the ground, is of yellow stock bricks, with red strings and arches: the side walls are pierced with six semicircular-headed windows, a triplet window on either side forming the principal features in front. The building is designed to accommodate 550 persons, viz.—450 on ground-floor, and 100 in end gallery. The architect is Mr. C. Pertwee, of Chelmsford, under whose superintendence the works are in progress. Mr. M. Gardner, of Coggeshall, is the builder. The cost of the chapel is estimated at 1,165*l.*, and of the house at about 400*l.*

Blowwich.—The memorial stone of an enlargement of the Wesleyan Chapel, Leamore-lane, has been laid. The plans for the enlargement were prepared by Messrs. S. & J. Loxton, of Wednesbury, architects; and Mr. W. Wotton will carry out the work.

Llanelly.—The foundation stone of a new Congregational Chapel has been laid at Llanelly, by Mr. J. Crossley, of Halifax. The entire cost will be 2,000*l.* The new building will be in form a parallelogram, 58 ft. 6 in. long, and 38 ft. wide, inside measurement, exclusive of the porches in front, and the apex in the rear. The accommodation at present to be provided on the ground floor will be for 366 adults, and in the gallery 112, besides 60 children, making a total of 538, exclusive of space for organ and choir, with opportunity for two additional galleries holding about 150. The style is Early Decorated, and the materials to be used will be furnace-dressed rubble, with Bath stone dressings and occasional bands with Bridgwater grey bricks.

Great Horton.—The Bethel Primitive Methodist Chapel at Great Horton has become too small for the demands upon it, and the foundation-stone of an addition which is to be made to the present building has been formally laid by Captain H. J. McCulloch, of York. Instead of a trowel a small silver salver was presented to Captain McCulloch, as a memorial of the event. The plan includes raising the roof, advancing the front, making an addition at the back, &c. Mr. J. T. Fairbank, of Bradford, is the architect; and when completed the erection will afford pew accommodation for about 450 persons. The cost of enlargement is estimated at about 800*l.*

Bradford. — The foundation-stone of a new United Methodist free chapel and schools has been laid, in Otley-road. The general plan of the building is a parallelogram. The internal dimensions of the chapel will be 58 ft. by 41 ft., and it will seat 350. The school-room, which is under the chapel, will accommodate 200 children. There are to be class-rooms, minister's vestry, and chapel-keeper's apartments. The chapel will be lighted from the ceiling with star-lights, and heated with hot air on Haydon's principle. The cost of the buildings will be about 1,250*l.* The style is Italian, and the building is arranged for future extension. The architect is Mr. Thomas Clarke.

STAINED GLASS.

Weston Church, near Bath. — A memorial window has just been placed in the chancel of Weston Church, in memory of Mr. C. Batsford, and his son-in-law, Major-Gen. Home. The eight compartments of the window contain figures of the four Evangelists, and four other writers of the New Testament, under canopies. The window was given by Mrs. Batsford and Mrs. Home, the widows of the persons commemorated, and has been executed by Mr. Wailes, of Newcastle.

St. Thomas's, Radcliffe (*Lancashire*).—Messrs. R. B. Edmundson & Son, of Manchester, have completed a stained glass memorial window for the chancel of St. Thomas's New Church, Radcliffe. It is a five-light window, and in each light there are upper and lower compartments. In the upper row, the central and most prominent figure is that of St. Thomas (as the patron saint of the church), refusing to believe the statement of the other apostles, that they had seen the risen Lord. Beneath this is the scene which occurred eight days afterwards. Thomas touches with his finger the print of the nails, and is no longer faithless, but believing. On the right of the doubting Thomas are St. Matthew and St. Mark; and on the left, St. Luke and St. John. Beneath the Evangelists are Christ in the Manger, the Baptism of Christ by John, the Last Supper, and the Crucifixion. In the smaller compartment above the principal panels are the emblems of the Four Evangelists, and family arms. The subjects are rendered conventionally.

Bradford Church.—A stained glass window has been placed in the tower. As the whole length of the church, from east to west, has been thrown open, this embellishment adds to the effect produced by the length and numerous arches of the church. This window has been inserted by Mr. Wm. Wells, of this town, and his sister, Miss Wells, to the memory of two sisters; and consists (with the exception of the Saviour) of female Scriptural personages. The upper or tracery part of the window (the stone work of which is stiff and monotonous) is filled with figures, in two rows. In the upper, beginning from the spectator's left, are Elizabeth, the Virgin Mary, Mary Magdalene, and Martha. In the lower are Eve, Sarah, Miriam, Hannah, Ruth, Naomi, Esther, Joanna, Anna, and Dorcas. The window consists of six low and narrow lights. Beginning as before from the left, two lights are thrown together to make a subject. In the first compartment above is the Annunciation, Mary in one light, the angel in the other; below, the Saviour at the House of Mary and Martha, our Lord in one light, the sisters in the other. In the right compartment above, are our Lord and Mary in the Garden; and below, the Woman of Samaria. In the two middle lights are represented the Women at the Tomb. The window was done by Messrs. Heaton, Butler, & Bayne, of London.

SCHOOL-BUILDING NEWS.

Aylesford (*Kent*).—A new Sunday school has been opened here, in connexion with the enlargement of the Wesleyan chapel, which has been extended at the eastern end, so as to give room for seventy additional sittings. The school, which is built of similar material to the chapel (Kentish rag, with Bath stone facings), will accommodate about 150 scholars. It adjoins the chapel at the eastern end. The whole cost of the new building and enlargement of the chapel was 400*l.* The plans were designed by Messrs. Peck & Stephens, of Maidstone, and the work has been performed by Mr. Norris, the contractor, under the supervision of Messrs. Walter & Harrison, who gave their gratuitous services as surveyors.

Sutton Valence.—The London Clothworkers' Company's new Grammar School has been opened. The company have not only rebuilt, but re-endowed, to a great extent, the school originated by William Lambe, "citizen and clothworker." Their architect is Mr. Potter.

Reading.—The chief stone of the Grey Friars' National and Infant Schools, now being erected on a site near Grey Friars' Church, has been laid. The schools will be in the Early Decorated style of architecture, and built of flint and stone to harmonise with the church. It is intended there shall be two schools, one for boys and the other for girls, the dimensions being 37 ft. by 20 ft. The infant school will be 30 ft. long, and 16 ft. wide; and large class-rooms will be connected with the several schools. Mr. Woodman, of Reading, is the architect; and Messrs. Wheeler & Sons are the contractors.

Northchurch (*Herts*).—A new National School building at Northchurch has been publicly opened. The school consists of two large school-rooms, separated by a movable partition, and one large and one small class-room. They are designed to accommodate about 150 children. There are residences for the master and mistress, and boys' and girls' play-grounds. The school buildings are constructed of flint work and Bath stone externally, and the residences have red and buff facings. There is also a room for parochial purposes. In the west window of the boys' room are the arms of Earl Brownlow and Mr. Van de Wall. The flooring is of wood blocks laid in concrete. The roof is open-timbered, and plastered between the rafters. The cost has been 1,600*l.*

Chelveston (*Northants*).—The foundation stone of a new school has been laid in Chelveston-cum-Caldecott. Mr. E. F. Law, of Northampton, is the architect. The schools will accommodate about 130 scholars, and a master's house will be attached. The building, which is in the shape of a T on the plan, will have an open roof with stained timbers, and the windows will be the ordinary square-headed ones, with hood mouldings. The schools, when completed, it is estimated, will cost between 700*l.* and 800*l.* The site and the whole of the stone have been given by Mr. H. C. Wise, a large landowner in the parish.

Books Received.

A Popular Explanation of the System of Land Registration under Lord Westbury's Act. By Robert J. Abraham. Second edition. London: Routledge, 1864.

A knowledge of even the existence of the Land Registry, which is now law, is confined to so few, that the author of this pamphlet has considered a *résumé* of the subject of registration to be the best means of conveying the necessary information to the many. The *process*—unlike lawyers' "processes"—is exceedingly simple and expeditious, as well as economical: indeed, it is no doubt these very recommendations which have hitherto prevented lawyers from enlightening their landed clients on the subject; more especially since even what is requisite can be done without them. To all who are impatient of the interminable humbug of the old law as to the titles and title-deeds of landed property, the Lord Chancellor's excellent measure of 1862 gives an opportunity of shaking off the incubus at once and for ever, by the total disuse of long-winded musty title-deeds and the substitution of a brevity and completeness of title which adds security as well as clearness and economy to the transfer, mortgage, &c., of landed or house property. "The deposit of a land certificate," as Mr. Abraham remarks, "is as good a security as the deposit of title-deeds, and better; because it shows the entire condition of the property, while deeds can be suppressed,"—yes, or lost, as by accident, by burning, or otherwise. The Act expressly declares that the mere deposit of a land certificate with a person lending money shall create an equitable mortgage on the property, and bankers will therefore willingly make advances upon a security so perfect in its character. And yet so economical is the process that a mortgager may obtain 4,000*l.* on a registered title at an expense of 5*l.*, instead of being mulcted to the extent of hundreds of pounds, as heretofore. Such an Act, it will thus be seen, is calculated to do good; and as it is very desirable that it should be known, the public are indebted to Mr. Abraham for putting it in their power, by a perusal of his pamphlet, to inform themselves of the nature of the new Land Registry Act.

VARIORUM.

"The Art-Student" contains an interesting view of the cloisters adjoining the Basilica of San Paolo fuori le Mure, Rome, from a photograph. ——*Fraser's Magazine*, of the month, contains, amongst some interesting papers and very good writing, an article on "Elizabethan Gardening" that might be usefully conned by many of our readers. The writer deduces that the principles regulating Elizabethan gardening were as follows:—

"1. To lay out the garden in accordance with the domestic architecture of the period, viz., in long terraces and right lines (forthrights), to harmonise with the rectangular lines of the building, and the long galleries of

the interior; and, at the same time, to break up the monotony of the straight lines with knots and beds, often of intricate patterns; in like manner as the bay windows, clustered chimneys, intricate tracery, and ornamented gables relieved the straight lines of the ground plot of the building.

"2. To plant the beds with mixed flowers, and to let the colours so intermingle and blend together, that the whole should produce a mosaic of rich indeterminate colour; ever new and ever varying, as the flowers of different seasons succeeded each other.

"3. To produce a garden of flowers and shrubs for all seasons, to tempt the owner to take pleasure and exercise therein at all times."

—— The current number of the *Gentleman's Magazine* is a good one, from the architectural point of view, including Notes on the Architecture of Ireland; Art applied to Industry, in the matter of Furniture; an elaborate paper on the Runic Monuments of Denmark, and other articles.——"A Dictionary of Chemistry," by Henry Watts, B.A. (Longman & Co.), is fast advancing towards a successful completion. The last part before us (xviii.) has reached the letter L.——Part 3 of the photo-lithographic reproduction of "The First Folio Edition 1623" (Shakspeare), in course of publication by Day & Son, contains the conclusion of "Much adoe about Nothing," "Loves Labour's Lost," "A Midsommer Night's Dreame," and the commencement of "The Merchant of Venice." The price that was lately given for an original first folio edition may serve to increase the interest elt in this fac-simile.——"Bird's-eye Views of English Joint-Stock Banking," by Examiner. No. 1. July, 1864. London: Mann, Cornhill. It is well the public should know a little more as to the nature of joint-stock banks than they yet do, although the opposition which they met with on their first introduction, in 1833, has long since declined. The pamphlet under notice supplies the desideratum, and also shows the real nature of the position of the Bank of England with relation to other banks. Some persons imagine the Bank of England to be a national institution, for the transactions of which the country is security. This is a very erroneous view. It is true that the Bank of England holds an exceptional position with respect to the Government. This arises from the fact that she has made advances from time to time to the country, for national purposes, which amount altogether to 11,015,100*l.*, in consideration of which she is the banker of the Government. She always holds a large amount of Government deposits. She receives the public revenue, and pays dividends on the national debt. But, besides Government transactions, the Bank of England does business with the general public. She receives deposits, grants loans, and discounts, like other joint-stock banks. She allows no interest on deposits, nor does she permit accounts to be overdrawn. Customers, therefore, obtain more favourable terms for business at other banks. The London and Westminster Bank holds 15½ millions as deposits, and pays its shareholders 30 per cent. dividend per annum on one million of paid-up capital. The Union Bank of London holds 16½ millions as deposits, and pays its shareholders 15 per cent. per annum on 750,000*l.* of paid-up capital. The Bank of England holds 12¾ millions of deposits (exclusive of Government monies), and pays its shareholders 9 per cent. dividend per annum on 14½ millions of capital. The importance of branches in connexion with joint-stock banks, for mutual support under difficulties of local position, is pointed out in the pamphlet, together with a general view of the whole question.

Miscellanea.

British Archæological Association. — The members of this Association are holding a most successful Congress in Ipswich and the surrounding towns. We will give an account in our next.

London and County Banking Company.—If 6 per cent. for the half year and a bonus of 10 per cent. mean anything, it may be worth while to look to the report of this company, published in our advertising columns.

Mr. Louis Desanges.—Some years ago, Mr. Louis W. Desanges, the well-known artist, executed for the Town Hall at Nice, an equestrian portrait of his Majesty Victor Emanuel. By a royal decree, dated July 30 last, the king has conferred upon the artist the cross and title of Knight of St. Maurice and St. Lazarus, and the decree and decoration have been transmitted to London through the Minister of Foreign Affairs at Turin.

St. Peter's, Croydon.—The spire and portions of the interior of the Church of St. Peter, at Croydon, were destroyed by fire on Tuesday night. The carelessness of some workmen who were repairing the spire is considered the source of the mischief.

International Congress of Social Science. The International Congress for the Promotion of Social Science, which held its session at Ghent in 1863, has decided to meet at Amsterdam this year in September. The King has been pleased to place the Royal Palace of that city at the disposal of the congress for its sittings.

The Archæology of India.—Recent letters from Nagpore state that the Chief Commissioner of the Central Provinces, having been struck with the extent and richness of the archæological remains scattered throughout his satrapy, has founded an antiquarian society, which it is proposed to affiliate to the Asiatic Society in Bengal, in the same way as a somewhat similar society was formed a short time ago in the Punjab.

Discovery of a Roman Bridge on the Tyne. Mr. William Coulson, who some time ago discovered the mason-work of the approach to the Roman bridge across the North Tyne, on the bank opposite to the Chesters, has just succeeded in discovering the entrance on the north bank of the Tyne of another Roman bridge, by which the Watling-street crossed the river, a little to the west of Corbridge. The position of this bridge, hitherto laid down on maps hypothetically only, is thus fully determined, the entrance on the southern bank having been previously known.

Fatal Accident with a Cesspool.—A shocking accident has occurred at Gravesend, involving the loss of three lives. Two men were emptying a cesspool in Passenger's-court, West-street. One had been down but a few minutes when he was seen to fall off the ladder. His son volunteered to go down the hole, but another person, who had had more experience, did so, when the gas rendered him also insensible. A sergeant of police then rashly descended and also fell insensible. All three were killed. A police clerk then discharged into the cesspool a fire annihilator, which, it is said, expelled the foul air, and the bodies were then speedily recovered.

Widening of Cursitor-street.—At a meeting of the Metropolitan Board of Works, the following resolution was passed:—"That the Board do contribute one-third of the cost of effecting a public improvement, to be carried out by the joint committee of inhabitants of St. Andrew, Holborn-above-Bars, and Liberty of the Rolls, by the widening of Cursitor-street, Chancery-lane, as shown upon the plan marked C, submitted to the committee, at an estimated cost of 2,790*l.*; such contribution not to exceed 930*l.*, and that such amount be paid to the said committee, on a certificate from the architect of this Board of the completion of the work." The Holborn District Board of Works, on the 18th ult., agreed to contribute 500*l.*, and the Public Chambers' Company, 930*l.* There now remain only 430*l.* to make up the 2,790*l.* required, and it is hoped that the Strand District Board of Works will contribute 250*l.* of that sum.

The Decoration of Westminster Palace.—The report of the commission appointed to consider the agreements with the artists engaged on the wall-paintings of Westminster Palace has been printed. The commission think a further sum of 3,000*l.*, in addition to the 3,000*l.* he has already received, should be paid to Mr. Herbert for his "Moses," &c., and that the contract as to the remaining eight pictures should be cancelled, and a new contract entered into. They recommend that Mr. Maclise should receive 10,000*l.* in all for his two paintings already finished, instead of 7,000*l.*, the sum agreed upon, the contract for the remainder to be cancelled, and a new contract entered into. Messrs. Cope & Ward had eight pictures each to execute for 600*l.* each. Mr. Cope has completed six, and Mr. Ward five. They are recommended to complete the remainder with all convenient speed, and that they be paid 100*l.* additional for each picture. Mr. Dyce's work was left incomplete at his death, and the commission do not think the state of things calls for further interference. The commission express the opinion that in future there should be no deviation from the contract entered into, believing that nothing would more effectually discourage the country from giving important commissions to artists.

Progress in the East.—The King of Ava has granted a perpetual concession for railways, telegraphs, and collieries in Burmah.

A New Discovery in Scottish Mineralogy. The men employed at the old red sandstone quarry, at Wester Bardrill, observed a soft whiteish substance in veins traversing the upper portion of the rock. This substance turns out, it seems, to be meerschaum or keffekil.

Death of a French Sculptor.—The journals announce the death of M. Aristide Hasson, statuary, aged 61. The deceased was a pupil of David (d'Angers). His principal works in Paris are the statues of Bailly and Voltaire, in the façade of the Hôtel de Ville; Summer and Winter, two colossal figures in one of the fountains of the Place de la Concorde; and the statue of St. Bernard, at the Madeleine.

The New Opera House, Paris.—A commission of twelve engineers, scene painters, architects, &c., presided over by a member of the French Institute, has been appointed to examine the improvements to be introduced into the machinery and decorations of the new Opera House in Paris.

Water Supply for Vienna.—A stupendous aqueduct for the convenience of the Viennese is about to be commenced. Starting from the foot of the Semmering, the aqueduct will be constructed at a height of 250 ft., and will convey to Vienna—a distance of 12 miles—a pure and continuous stream of water. This desirable undertaking will require several years to complete; the estimated cost being more than a million and a half sterling.

Metropolitan Houseless Poor-law Act.—The new Act to make provision for distributing the charge of relief of certain classes of poor persons over the whole of the metropolis has been issued. After the 29th of September the guardians of parishes or unions in the metropolis may keep account of the relief afforded daily in food and articles to the houseless, from eight o'clock in the evening till eight o'clock in the morning; and, on a certificate of the Poor-law auditors and of the Poor-law Board, that proper wards had been provided, obtain payment from the Metropolitan Board of Works out of their general fund. Guardians may provide proper vagrant wards and casual wards, and be reimbursed the outlay under this Act. The new law is not to apply to any expenditure for relief received after Ladyday, 1865. The Act is to be cited as "The Metropolitan Houseless Poor Act, 1864."

Improved Dwellings for the Working Classes.—A meeting of the company recently formed for the purpose of erecting dwellings for the labouring classes in various parts of the metropolis, and of which Lord Stanley is chairman, was lately held at the Mansion House, Mr. Alderman Waterlow, the deputy chairman, presiding. The report for the half-year just ended stated that the subscribed capital of the company amounted to 30,000*l.*, in 300 shares of 100*l.* each. Three calls of 10*l.* per share had been paid, and 2,910*l.* remained in advance of future calls. 739*l.* odd had been paid in completion of the purchase of freehold property in Bagnigge Wells, and an agreement had been entered into for a lease of a large plot of ground in Old St. Pancras-road, close to the Great Northern Railway station at King's Cross, which will be large enough for five blocks of buildings similar to those being erected at Wapping and Southwark, each of which provides accommodation for twenty families — ten having three rooms and washhouses, and ten two rooms and washhouses each. The buildings already contracted for are being proceeded with in a satisfactory manner, and they will be probably ready for occupation about Christmas. It is proposed to expend 3,200*l.* in improved dwellings in Redcross-street, Southwark, for sixteen families, with two shops and basements, at a gross rental of 440*l.*; 7,200*l.* in Brewhouse-lane, Wapping, for sixty families, at a gross rental of 850*l.*; 14,200*l.* in Old St. Pancras-road, for 100 families, at a gross rental of 1,602*l.*; and 3,230*l.* in King's-cross-road, Bagnigge Wells, for twenty families, 382*l.* Notwithstanding the increased cost of the buildings, consequent upon the high price of bricks and the great demand for labour, the directors have undiminished confidence in the success of the enterprise. Numerous applications for the dwellings have already been received, although the buildings are not yet roofed in. The report was unanimously adopted.

Manchester Cathedral Tower.—The corner stone of the new tower of the Manchester Cathedral has been laid, with suitable ceremonial, by the Bishop of Manchester.

Clerkenwell Flower Show. — The third annual exhibition of plants and flowers, grown by the Ragged-school children and working classes of the parish of Clerkenwell, took place on Wednesday and Thursday in last week, at the Lamb and Flag Ragged-schools, Lamb-court, Clerkenwell-green. The prizes were divided into eight classes. The exhibition opened at twelve o'clock, and was visited during the day by a great number of persons, who much admired the taste with which it had been got up. The prizes varied from 5s. to 4d. There were 265 plants, and 90 exhibitors. The number of prizes awarded was 38. Among the chief objects of interest, and to the exhibitors of which two of the highest prizes were allotted, were some potatoes that had been grown in a tub, and also some French beans which had been reared in a box, by two of the children belonging to the schools.

Essex Archæological Society.—The twelfth annual meeting of this Society was held at Thaxted, when between fifty and sixty members, besides other gentlemen and many ladies, went to Horeham Hall, the residence of Mr. F. G. West. Mr. T. B. Western presided as chairman. The report was read, congratulating the members on the continued prosperity of the Society, which numbered about 160 members. Mr. West read a paper on Horeham Hall; the Rev. G. E. Symonds one on Thaxted; the Rev. B. Lodge one entitled "Some Account of an early MS. 'Translation of Palladius on Husbondrie,' in the Library of Colchester Castle;" a lady member, Miss Fry, of East Ham, a near relative of the celebrated Mrs. Fry, one entitled "Notes on Rainham Church;" and the Rev. J. M. Jephson one entitled "Some Additions to the Glossary of Essex." The party then went to Tilty and inspected the Abbey ruins, and the Rev. Mr. Spurrell made some remarks on the Abbey Church. The company then returned to Thaxted Church, where the Rev. G. E. Symonds read a paper on the edifice. Dinner was partaken of at the Sun Inn by about forty of the company.

The Society of Wood-carvers.—The general report of this society for the year ending July 7th, 1864, has been issued. It alludes to the very prosperous condition of the art during the past year, and says,—"The flourishing state of wood carving may in some measure be attributed to the increased taste for works of a decorative character, arising from the Exhibition of 1862, and the decided beneficial influence exercised upon the public taste by such very valuable institutions as the Society of Arts, the Kensington Museum, and the Architectural Museum; also to the strenuous efforts now being made to elevate the condition of the art workman by inculcating a true and healthy appreciation of art work, regarding which wood-carvers have yet much to learn, and will require much patient study and perseverance in order to enable them to take their place, as they should do, in the front rank of the art workmen of our country. The increased demand for stone carving has done much towards making wood-carvers busy, several of our members having transferred their services to that branch of the profession through the great demand for stone carving, a very large order being now in hand for the new Foreign Office, which will occupy some years to complete."

TENDERS.

For building seven three-story houses and shops, in the Humberstone-road, Leicester, for Mr. W. F. Bramley. Quantities supplied. Mr. Francis E. Drake, architect. Exclusive of plumbing, smiths' work, ironmongery, and gasfitters' work:—

Freeman	£1,497	0	0
Coltman	1,421	0	0
Clark	1,277	0	0
Porter	1,245	0	0
Hutchinson & Son	1,185	0	0
Glover	1,180	0	0
Chambers (accepted)	1,140	0	0

For new farm buildings, at Fishley Hall, Norfolk. Mr. John B. Pearce, architect:—

Brown & Bailey	£888	0	0
Curtis & Balls	798	0	0
Norfor	714	0	0
Parker & Wright (accepted)	710	0	0

For rebuilding a mill and factory, after a fire, George-street, Grosvenor-square. Mr. G. H. Simmonds, architect.—

Brown	£3,688	0	0

For building parsonage house, Lorrimore-square, for Rev. Mr. Goring. Mr. H. Jarvis, architect:—

Kent	£1,658	0	0
Henshaw	1,648	0	0
Sawyer	1,587	0	0
Glenn	1,517	0	0
Hardiman & Sandon	1,446	0	0

For the erection of workshops, &c., at Deptford, for the Granite and Hardstone Working Company. Mr. H. H. Collins, architect. Quantities supplied:—

Sharpington & Cole	£2,679	0	0
Brass	2,580	0	0
Ennor	2,578	0	0
Macey	2,482	0	0
Hill & Keddle	2,450	0	0
Newman & Mann	2,408	0	0
King & Sons	2,370	0	0

For sundry alterations, &c., at Crown-street, Finsbury, for Mr. A. Sion. Mr. H. H. Collins, architect:—

Ennor	£704	0	0
Eaton & Chapman	611	0	0
Cohen	597	0	0

For painting and repairs to the Marylebone Courthouse:—

Ransom & Son	£299	0	0
Allen	282	0	0
Aldred & Doulton	280	0	0
Southall & Watson	275	0	0
Wilkinson & Co.	273	14	0
Creswell	271	0	0
Smith & Roberts	243	0	0
Gribble	180	0	0
Rowten	165	0	0

For enlargement of farmhouse and premises, for the Rev. H. D. Blanchard, Middleton-on-the-Wold. Mr. Joseph Wright, architect:—

Dalton	£335	15	0
Hewson (accepted)	335	0	0

For the erection of a Primitive Methodist Chapel, with school and class-rooms, at Hornsea. Mr. Joseph Wright, architect. The following are accepted, with some alterations in the bricklayer's work and mason's work:—

Reynand, brick and plaster	£151	0	0
Waller, mason	135	15	0
Allman, carpenter and joiner	335	0	0
Wilde & Sons, slaters	28	10	0
Young & Poole, ironfounders	48	10	0
Gouldesborough, plumber, glazier, gaslitter, and painter's work	42	10	0

For St. Martin's Church and parsonage, Kentish Town. Mr. E. Lamb, architect:—

Fish	£8,489	0	0
Jackson & Shawe	7,907	0	0
Carter & Son	7,770	0	0
Dove, Brothers	7,665	0	0

For race-stand for the Alexandra Park. Messrs. Clarke & Holland, architects:—

Piper and Wheeler	£14,720	0	0
Sharpington & Cole	14,610	0	0
Dove, Brothers	14,600	0	0
Myers & Sons	14,359	0	0
Jackson & Shaw	12,170	0	0

For erecting premises on the site of 141 and 142, Church-street, Shoreditch. Messrs. Mathews & Son, architects. Quantities supplied by Mr. F. G. Widdows:—

Dennis	£1,998	0	0
Forrest	1,986	0	0
Higgs	1,800	0	0
Tully & Son (accepted)	1,760	0	0

For the erection of new house, at Odsey Park, Ashwell, Herts, for Mr. Herbert Fordham. Mr. Bates, architect:—

Gimson	£2,109	0	0
Culshaw	2,055	0	0
Twelvetrees (accepted)	1,974	0	0

For rebuilding Nos. 65 and 66, High-street, St. Marylebone, for Mr. James Rowe. Mr. Charles Bradley, architect. The quantities were supplied:—

Fish	£2,150	0	0
Howard	2,027	0	0
Brown	1,900	0	0
Strudwick	1,900	0	0
Tracey & Co.	1,867	0	0
Mills & Son (accepted)	1,805	0	0

JOHN DOWNEY, Victoria Wharf, Nine Elms, S.
Also Licensed Lighterman, of 11, Millbank-row, S.W.; and Licensed Lighterman and Wharfinger, of Hermitage Steam Wharf, Wapping, E.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.
The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt out in stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees 17, Millbank-street, Westminster.

NEW STOCK NOW READY.
FINE WHITE BRICKS.
BEST RED BRICKS.
White, Black, and Red Cutters. Also a large assortment of FANCY MOULDED BRICKS & GARDEN EDGINGS,

IMPORTANT TO BUILDERS.
GREEN'S PREPARED ASPHALTE, for check damp cellars, &c. price 40s. per ton, on Midland or London and North-Western Railway, Bedford.—Address DANIEL GREEN, Bedford. List of Prices for Green's Asphalte Floors forwarded by post.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union-joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA PERCHA COMPANY, PATENTEES,
WHARF ROAD, CITY ROAD, LONDON.

At the HALF-YEARLY MEETING of the Proprietors, held on Thursday, the 4th of August, 1864, at the London Tavern, Bishopsgate-street, the following Report for the year ending the 30th of June, 1864, was read by the Secretary.

WILLIAM CHAMPION JONES, Esq. in the Chair.

REPORT.

The Directors, in submitting to the Proprietors the balance-sheet of the Bank for the half-year ending 30th June, 1864, have great pleasure in reporting that the net profit for the six months, after deducting all charges, amounts to 109,501l. 12s. 4d. which, added to 18,868l. 3s. 10d. brought forward from the last account, results in a total of 128,369l. 16s. 2d.

Out of this sum the Directors have declared a dividend of 6 per cent. and a bonus of 10 per cent. for the half-year, both free of income-tax, amounting together to 104,432l. leaving a balance of 21,736l. 16s. 2d. to be carried forward to profit and loss new account.

The dividend and bonus will be payable at the head office, or at any of the branches, on and after Monday the 15th August.

We, the undersigned, have examined the foregoing balance-sheet, and have found the same to be correct.

(Signed) WILLIAM NORMAN, R. H. SWAINE, JOHN WRIGHT, } Auditors.

London and County Bank, July 28, 1864.

The foregoing report having been read by the Secretary, the following resolutions were proposed and unanimously adopted :—

1. That the report be received and adopted, and printed for the use of the shareholders.

2. That the cordial thanks of this meeting are due, and are hereby tendered to Philip Patton Blyth, esq. William Champion Jones, esq. and William Nicol, esq. M.P. for their special services and indefatigable exertions in promoting the interests of the bank, and that in grateful recognition thereof, a sum of fifteen hundred guineas be applied in the purchase of plate, and presented to them as a testimonial from the shareholders of the London and County Bank.

3. That the thanks of the meeting be given to the board of directors, for the able manner in which they have conducted the affairs of the Company.

4. That the thanks of this meeting be presented to William McKewan, esq. the general manager, and also to the principal and other officers of the establishment, for the zeal and ability with which they have discharged their respective duties.

(Signed) W. CHAMPION JONES, Chairman.

The chairman having quitted the chair, it was resolved, and carried unanimously—

5. That the cordial thanks of this meeting be presented to William Champion Jones, esq. for his able and courteous conduct in the chair.

(Signed) P. P. BLYTH, Deputy Chairman.

Extracted from the minutes,
(Signed) F. CLAPPHAM, Secretary.

LONDON and COUNTY BANKING COMPANY.

Notice is hereby given, that a DIVIDEND on the Capital of the Company of six per cent. together with a BONUS of ten per cent. for the half year ending 30th JUNE 1864, will be paid to the proprietors, either at the Head Office, 21, Lombard-street, or at any of the Company's branch banks, on and after MONDAY, the 15th instant.—By order of the Board,' W. M'KEWAN, General Manager.

21, Lombard street, August 4 1864.

LITTLE CASTERTON FREESTONE.
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD,
The Owner; and see Specimen at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about 4 feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the Kingdom.
*** The above WEATHER STONE is used largely by London Builders.

RED MANSFIELD STONE,
WHITE MANSFIELD STONE.
YELLOW MAGNESIAN or BOLSOVER LIMESTONE.
Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station.
Mr. ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

BELLMAN & IVEY,
GENERAL AND ORNAMENTAL PLASTERERS,
Manufacturers of
SCAGLIOLA MARBLE
and
SUPERIOR PLASTER OF PARIS.
This Plaster, made expressly for their own business, is of excellent quality, and its extreme lightness in weight ensures a saving of 20 per cent. in use, from its covering one-third more superficies than the general plaster.
PRIZE MEDALS
were awarded Messrs. Bellman & Ivey for their Works at the Exhibition of 1851, and again in 1862.
PLASTER WORKS, 3, BEDFORD-STREET, LIQUORPOND-STREET, LONDON, E.C
SHOW ROOMS AND OFFICE,
14, BUCKINGHAM-STREET, PORTLAND-ROAD LONDON, W.

PORTLAND STONE.
Portland Slab, Paving, Landings, and Scantling of every size sawn by steam, always kept in stock; also York Paving and Landings, Steam, Stone, and Marble Saw Mills, Cremorne Wharf, Chelsea, and Grosvenor-road, Pimlico.
THORN & CO. Stone Merchants and Contractors

TO CONTRACTORS, QUARRY OWNERS, MINERS, &c.
BLAKE'S STONE BREAKER
is recommended by the best Engineers in this and other countries to Break Stone of every description, of the best quality for Macadam Roads, Concrete, Ballasting Railways, &c. It takes in large blocks or round boulders, and reduces them to fine road metal, at a cost of from 2d. to 3d per ton. If your pauper labourer costs 3d. per day, this machine will do more work, and do it better, at 2d.—For circular testimonials, &c apply to
H. R. MARSDEN,
SOHO FOUNDRY, LEEDS.

SLATES.—JONES & CO. have a STOCK of SLATES of different sorts, from the best quarries in Wales. SLABS and CISTERNS delivered at any station in quantities of not less than five tons, from their depôts,

WORKS, LONDON and BIRMINGHAM.
MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London Atmosphere
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS. Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

CHEAP, LIGHT, AND DURABLE ROOFING.
CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.
1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. Fixed its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.
INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.
CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and
DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.
Samples, testimonials, and full instructions, on application to
CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

Dispensing with Cranks, Wires, Ball, Lever, Service-box, &c.

Any number can be supplied from one pipe.

W. PATTEN, 22, Old Fish-st. St. Paul's, London.

A Cottage Closet, with Patten's Patent High-pressure Valve, complete, 12s. 6d.

READE & HEWITT'S PATENT PNEUMATIC PAN and SELF ACTING WATER CLOSETS, RAILWAY URINAL, and SEWER FLUSHING APPARATUS.

The simplest, strongest, and cheapest Closets manufactured, acting efficiently with or without Supply Cistern, and at high or low pressure. Specially adapted for railway stations, offices, public buildings, workshops, and any situations where subjected to severe usage. Prevents waste of water, saves pump, cranks, wires, service-box, and all the complicated apparatus of self acting closets.

The Self-acting Pneumatic Flushing Vessel flushes ranges of urinals regularly at intervals, the time between the discharges being regulated by a simple tap, thus saving an immense quantity of water, which ordinarily runs to waste.

Best Pan Closet, complete	£2 12 6
Best Self-acting Closet, complete	2 15 0
Railway Urinal Flushing Vessel, complete	3 3 0

LIVERPOOL, No. 5, WELLINGTON BUILDINGS, SOUTH CASTLE STREET.

An Agent is required for the sale of the above in London.

INTERNATIONAL EXHIBITION, 1862.

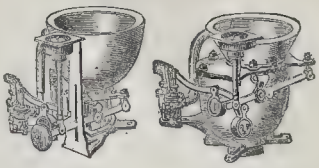
CLASS 35, No. 3849.

3s. 9d.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

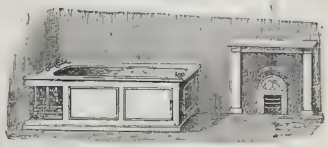


Experience has shown that this shape is the most simple and efficient and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

GILT BORDERINGS for ROOMS, from 1d. per foot. Best and Cheapest House in London for every description of Room Bordering, Picture Frame Mouldings, and Picture Frames of every description, at the very lowest prices. Re-gilding in all its branches to the trade. ¾-inch Gilt Beads, 7s. per dozen 6-feet lengths; best ditto, 12s.

GEORGE REES, 57, DRURY LANE.

Four doors from Drury-lane Theatre. Established in 1800.

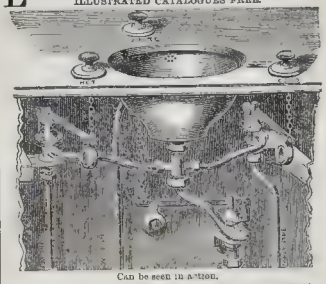


J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No cistern-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

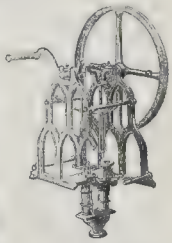
J. TYLOR & SONS' PATENT BATH APPARATUS.



The bath and boiler may be fixed in the same or separate rooms, anywhere below the level of cold-water cistern. Open or close fire at pleasure. No brickwork setting for boiler required.

Estimates given from architects' drawings, or by inspection of buildings.

Catalogues, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.



LAVATORY APPARATUS. ILLUSTRATED CATALOGUES FREE.

Can be seen in action.

SALES BY AUCTION.

CHANCERY-LANE.—Building Materials of Ten large Houses.

PULLEN, HORNE, & EVERSFIELD are instructed by the Directors of the Public Chambers Company, Limited, to SELL by AUCTION, on the PREMISES, on WEDNESDAY, AUGUST 17, at TWELVE, the MATERIALS and FITTINGS of TEN LARGE HOUSES, being Nos. 39, 40, and 41, Chancery-lane, and Nos. 1 to 7, Cursitor-street, comprising a large quantity of sound timber in roofs and floors, floor-boards, partitions, doors, sashes, and other fittings, stoves, ranges, iron railing, tiles and slates, stone coping, several tons of lead, and other materials.—May be viewed one day previously, and catalogues had of JOHN BLYTH, Esq. Architect, 1, Noble-street, Gresham-street; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

WESTMINSTER BRIDGE WORKS, STANGATE.—Travelling Cranes, Timber, Piles, &c.

PULLEN, HORNE, & EVERSFIELD are instructed by the Commissioners of her Majesty's Works and Public Buildings to SELL by AUCTION, on the PREMISES, as above, on FRIDAY, AUGUST 19th, at TWELVE for ONE, TWO very excellent TRAVELLING CRANES, one having a span of about 43 feet and the other of about 37 feet; also about 700 feet of Iron Rail, the stout Tin by Quarters, about 150 Beech and Fir Piles, Cast-Iron Plates, &c. May be viewed one week previously, and Catalogues had at the Office of her Majesty's Works, &c. 12, Whitehall-place; and of PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, S.W. and 80, Fore-street, City, E.C.

To LAND SPECULATORS, MANUFACTURERS, BUILDERS, and OTHERS.—Eight acres of Freehold Land, in one lot, close to the Custom-house entrance of Victoria Docks.

MESSRS. J. WALLEN & CLUNN are instructed to SELL by AUCTION, in one lot, at GARRAWAY'S, London, on FRIDAY, AUGUST 19, at TWELVE, about EIGHT ACRES of FREEHOLD LAND, land tax redeemed, with a stone's throw of the Victoria Docks. The amalgamation of these docks with the London and St. Katherine's cannot fail to establish them upon a larger and more proper as and secure scale than ever, and all surrounding land must partake of the additional value. The rare instance of so large a plot of land being sold in one lot affords to speculators a fine opportunity for realising the large profits gained in this locality by subdivision; and to manufacturers an admirable site for their purposes, if retained with plans in due time, of JOHN DINGWALL, Esq. Solicitor, 8, Tokenhouse yard; at Garraway's and of Messrs. J. WALLEN & CLUNN, 68, Old Broad-street, E.C. and Romford

Highly important Building Estate, adjoining the Park Station (Tottenham) on the Great Eastern Railway, about to be extended to Liverpool-street.

MESSRS. J. WALLEN & CLUNN have received instructions to SELL by AUCTION, at GARRAWAY'S, on FRIDAY, AUGUST 19th, at TWELVE, in numerous lots, a fine FREEHOLD ESTATE, of 112 acres, land-tax redeemed, surrounding the Park Station, and extending from thence to the town of Tottenham, only 6 miles from the City. Part of the property possessing considerable frontage on the road leading from the Park Station to the Tottenham and Edmonton-road, and in Willoughby-lane, being now fully ripe for building, will be sold in plots for shops, villas, &c. and the remainder, which is rapidly ripening, in two large lots of 65 acres and 33 acres, thus affording opportunities of profitable speculation to both large and small capitalists. There are also a comfortable farmhouse (lately occupied as a residence for a city man), with gardens and meadow, and a good homestead.—Particulars of JOHN DINGWALL, Esq. Solicitor, Tokenhouse-yard; and of the Auctioneers, 68, Old Broad-street, E.C.

Land for Manufactories, Wharfs, or Ship-yards, at Barking, on the Creek, and a short distance from the Railway, and reached by a good road.

MESSRS. J. WALLEN & CLUNN are instructed to SELL by AUCTION, at GARRAWAY'S, London, on FRIDAY, AUGUST 19, at TWELVE, in two lots, NINE and a HALF ACRES of FREEHOLD LAND, having considerable frontages on Barking Creek (navigable for vessels of 200 tons), and reached by land by a good roadway at the extremity of Fisher-street, about half a mile from the railway station. It is believed that chemical factories may be here carried on with great approbation, whilst the contiguity to the town on the one hand, and the deep water navigation of the river Thames on the other, are such as of great convenience.—Particulars, with plans, in due time, of EDMUND GRIFFIN, Esq. Solicitor, Ilford; at the Bull Inn, Barking; at the Place of Sale; and of Messrs. J. WALLEN & CLUNN, 68, Old Broad-street, E.C. and Romford.

BARKING ROAD.—Valuable Freehold Building Land, on the new and direct line of communication between the high London and Barking Road and the Thames Ironworks and Shipbuilding Yard.

MESSRS. J. WALLEN & CLUNN will SELL by AUCTION, at the VICTORIA TAVERN, opposite the Barking Road Station, on FRIDAY, AUGUST 26th, at ONE o'clock, in numerous lots, the highly valuable FREEHOLD BUILDING FRONTAGES on both sides of Shirley-street, immediately contiguous to the Thames Ironworks and shipbuilding Yard, and in the most direct route therefrom to Hallsville and the high London road. This is an unusually favourable opportunity for profitable speculation, from the reconstruction and extension of the above works has increased the, at all times, great demand for dwellings for artizans, numbers of whom, for want of accommodation, are obliged to reside at considerable distances from their work, and houses let before completion. This would likewise be a good position for shops.—Particulars, in due time, at the place of sale; at the Hallsville Tavern, Hallsville; of JOHN DINGWALL, Esq. Solicitor, 8, Tokenhouse-yard, E.C.; and of Messrs. J. WALLEN & CLUNN, 68, Old Broad street, E.C. and Romford.

Eligible Investments.

MESSRS. KENNEDY & BONNY will SELL by AUCTION, at GARRAWAY'S, AUGUST 19, at ONE, FIVE, SEVEN VILLA RESIDENCES, in Camden-town and Haverstock-hill; Two Small Leaseholds in Kentish-town; and Three neat Leasehold Dwelling-Houses, Bedford terrace, Old Ford-road. Particulars and conditions of sale may be now had at the Auctioneer's Offices, Cannon-street.

TOTTENHAM.—Freehold Cottages and Land.

MESSRS. KENNEDY & BONNY will SELL by AUCTION, at GARRAWAY'S COFFEE-HOUSE, Change alley, Cornhill, on THURSDAY, AUGUST 18, 1864, at TWELVE for ONE o'clock, in lots, FOUR FREEHOLD COTTAGES, LAND and PREMISES, situate in White Hart lane, and Queen street, Tottenham, near the Compasses public house. Let to weekly tenants. May be viewed at any time, by permission of the tenants, and particulars and conditions of sale had of Messrs. FRASER & MAY, Solicitors, 78, Dean-street, Soho; and at the Auctioneers' Offices, Camden Town.

OLD BROAD STREET, LONDON.

MR. MARSH has been appointed by the Master of the Rolls to SELL by AUCTION, at GARRAWAY'S COFFEE HOUSE, Change alley, Cornhill, in the city of London, on THURSDAY, the 25th day of AUGUST, 1864, at TWELVE o'clock at noon, in One Lot, pursuant to an Order of the High Court of Chancery, made in the matter of estates devised by the will of the late Henry Pinsbury, and in the matter of an Act of the Parliament of the 13th Victoria, intituled "An Act to Facilitate Leases and Sales of Settled Estates," subject to conditions of sale approved by his Honour the Master of the Rolls, all those TWO FREEHOLD MESSUAGES or TENEMENTS, with the piece of ground behind the same, on a portion of which piece of ground a range of offices is erected, situate on the south side of Old Broad-street, in the city of London, and being Nos. 35 and 36, in that street; held by Mr. Henry William Eaton, for a term which will expire at Michaelmas, 1872, at the annual rent of 76l. 15s. 0d. The said premises are now in the occupation of the said Mr Eaton or his under tenants, and are subject to land-tax. The said premises have a frontage into Old Broad-street of about 42 feet, with a depth of about 80 feet, and are most advantageously situate, being near to Gresham house, and immediately facing Great Winchester street. Printed particulars and conditions of Sale may be had of Messrs. WHITAKERS & WOOLBERT, Solicitors, 12, Lincoln's Inn Fields; Messrs. FREKE, CHOLMELEY, & FORSTER, Solicitors, 28, Lincoln's Inn Fields; at GARRAWAY'S; and of Mr. MARSH, the Auctioneer, in Cheviotte-row, Mansion-house.

E. B. CHURCH, Chief Clerk

Dated this 8th day of August, 1864.

MANUFACTURING WATERSIDE PREMISES, Millwall, Poplar, on the banks of the Thames, with possession.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, on TUESDAY, AUGUST 23rd, at TWELVE o'clock precisely, on the PREMISES, Millwall, Poplar, the valuable LEASE of extensive MANUFACTURING PREMISES, containing a superficial area of about 1a. 0r. 9p. with a frontage of 120 feet next the Thames. There is a wharf, brick and timber built factory 98 feet by 70 feet, with two chimney shafts, cooling-room, laboratory, counting-house, and yard, with well affording a supply of water. Held for an unexpired term of seventeen years, at a ground rent of 65l. per annum. Immediate possession may be had.

To be viewed till the sale, and printed particulars had of Messrs. BISCHOFF, COXE, & BOMPAS, Solicitors, 19, Coleman-street, E.C.; and of Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

To MANUFACTURING CHEMISTS and OTHERS

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, on TUESDAY, 23rd AUGUST, at TWELVE o'clock precisely, on the PREMISES, Ferry-road West, Millwall, immediately after the Sale of the Lease, the PLANT and UTENSILS of the CHEMICAL WORKS, comprising two pairs 10 horse power high pressure horizontal steam engines, wrought-iron Cornish boiler, 18 feet 6 inches long, 6 feet diameter; waggon ditto, 13 feet long by 5 feet and 6 feet deep; three hydraulic presses, with 8-inch and 12-inch rams, 40 feet of four plunger pumps, barrel, force, and lift pumps; three circular cast iron tanks, 13 feet diameter; wrought and cast-iron tanks and pans; four wrought-iron mixing cylinders, mixing machine, coolers, gas receiver, iron shafting, fire-irons, refrigerator cisterns and worms, crushing mill, ten cast-iron retorts, forge and bellows, crab crane, office fittings, erection of lime kiln and chalk enclosure, and numerous other effects.—May be viewed the day preceding, when catalogues may be had on the Premises; of Messrs. BISCHOFF, COXE, & BOMPAS, Solicitors, 19, Coleman-street, E.C.; and of Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

CAMBERWELL.—Valuable Freehold Building Plots, in the midst of a thickly-populated neighbourhood, within two miles of London Bridge, and a few minutes' walk from the Camberwell Station.

MESSRS. DEBENHAM & TEWSON will SELL, at the GUILDHALL COFFEE-HOUSE, near the Guildhall, on THURSDAY next, AUGUST 18th, at ONE o'clock precisely, in Bleiby-two Lots, including an eligible Plot for a Public-house, SEVEN ACRES of valuable FREEHOLD BUILDING LAND, situate near the Rosemary Branch, Southampton-street, Camberwell, close to Peckham-rye, with frontages to Peckham-grove and Diamond street, as well as to capital new roads now in course of formation. The subsoil includes a considerable portion of good gravel and sand, and the neighbourhood is one in which houses of a moderate size let readily at very remunerative rentals; also a neat Freehold House, having ten rooms and garden; and a Plot of Leasehold Land, with a frontage of 102 feet to Diamond street.—Particulars and plans (now ready) of Messrs. WEST & KING, Solicitors, 3, Charlotte-row, Mansion-house; and of the Auctioneers, 80, Cheapside.

UPPER TEDDINGTON and HAMILTON, MIDDLESEX.—About 64 acres of Freehold Building Land, overlooking Bushey Park, less than a mile from the Teddington Station, on the new Kingston line, and about five minutes' walk from the Hampton Station, on the Thames Valley line, the new nearly completed

MESSRS. DEBENHAM & TEWSON will SELL, at the GUILDHALL COFFEE-HOUSE, near Guildhall, on THURSDAY, AUGUST 25, at THREE punctually, in 22 lots, about 64 ACRES of valuable FREEHOLD BUILDING LAND (land-tax redeemed), part in the parish of Hampton, and part in Upper Teddington, very eligibly situate fronting the high road from Teddington to Hampton, and overlooking Bushey Park in the rear. The land lies high, the soil is a deep gravel, surface-water can be obtained at a moderate depth, water and gas services are laid along the road, and the land offers most desirable sites for the erection of first-class shops, or for villa or cottage residences. The demand for which in the neighbourhood is almost unlimited. Particulars, with plans, now ready, of Mr. W. WALKER, Surveyor, Hampton-wick; G. E. GUSTARD, Esq. Solicitor, 26, Lincoln's-inn-fields; and of the Auctioneers, No. 80, Cheapside.

SOUTH NORWOOD.—First-class Freehold Building Land, in a very healthy and picturesque locality, within five minutes' walk of the Norwood Junction Station, on the London, Brighton, and South Coast Railway, and about the same distance from the Addiscombe Station, on the Mid Kent Railway, affording access to London Bridge, Victoria, Charing-Cross, Crystal Palace, &c. at frequent intervals throughout the day

MESSRS. WINSTANLEY & HORWOOD will offer for SALE by AUCTION, at the GUILDHALL HOTEL, Gresham-street, on TUESDAY, AUGUST 30 to 2 o'clock, a PORTION of the valuable FREEHOLD PROPERTY, known as Elmore Park. Land tax redeemed, and great tithe rent charge. Lodge. Most eligibly situate at Woodside green, in the parish of Croydon, and possessing the important advantage of immediate contiguity to the Norwood Junction Station, with which it is in direct communication by the road now being made over the adjoining lands. The land is approached by capital roads, as at Birchanger, Howard, and Elmore roads, admirably adapted for the erection of detached villas or cottage residences, for which there is a great demand in this thriving and rapidly-increasing neighbourhood, and is divided into 24 plots of 50 feet each, by a depth of about 200 feet; and two others, of about 300 feet, by a cons derable depth. The water mains of two companies are laid on to the Estate, and gas is already supplied at Woodside-green. Possession may be had on completion of the purchases; and the plots viewed at any time.—Particulars, with plans, are being prepared and will be ready twenty days previous to the sale. In the meantime, further information will be afforded on application to Messrs. DRUMMONDS, ROBINSON, & TILL, Solicitors, Croydon, S.; and Messrs. WINSTANLEY & HORWOOD, Auctioneers, Surveyors, and House Agents, 10, Paternoster-row, St. Paul's, E.C.

To BUILDERS and OTHERS.—2,500 Yellow Battens, used for the seats and temporary erections on the occasion of laying the foundation stone of the new wing of the London Hospital by H.R.H. the Prince of Wales

MR. A. RICHARDS will SELL by AUCTION, at BIRD'S YARD, Globe-road, Mile-end, where they have been removed for convenience of sale, by order of Messrs. Hill & Keddell, the Contractors, on MONDAY, AUGUST 15th, at ONE, 2,500 YELLOW BATTENS, 6½ inches by 2½ inches, in lengths from 10 feet to 24 feet, and a quantity of short ditto.—May be viewed. Catalogues obtained on the ground, and of the Auctioneer, Tottenham.

PIMLICO IMPROVEMENTS.—Materials of Five Dwelling-houses, with shop-fronts and back buildings.

MR. GEORGE HAINES will SELL by AUCTION, on the PREMISES, on MONDAY, AUGUST 15, at TWELVE o'clock, all the excellent BUILDING MATERIALS of Nos. 23, 26, 27, 28, and 29, Lower Eaton-street, comprising a large quantity of prime bricks, sash, sound roofs, lead gutters, pipes and coverts, iron gratings, the complete fittings of the interior, the fittings of the usual description, stone sinks and paving, and useful fittings.—May be viewed. Catalogues of Messrs. HAINES & SON, Auctioneers, Moorgate-street, City; and at the Auctioneer's Offices, Grosvenor-street West, Eaton square, and No. 13, High-street, Kensington.

CROYDON, SURREY.—Important Freehold Building Land, nearly contiguous to the Addiscombe Railway Station, and within a few minutes' walk of the other Croydon Stations.

MESSRS. BLAKE will SELL by AUCTION, at the GREYHOUND INN, Croydon, on WEDNESDAY, AUGUST 31, at SIX for SEVEN o'clock in the Evening, Eighty Lots of very Eligible BUILDING LAND, being the first portion of the Leslie Estate, having one hundred and fifty feet frontage to St. Augustine's road on the western side of the Heath Lodge Estate. The land is set out in lots of 15 and 20 feet frontages, respectively, to capital 40 feet roads, named Alexandra, Alfred, and Edward roads. The subsoil is a deep rock of gravel, and all sewers and drains are in all the roads, and the water main of the Local Board is in the adjoining high road. In order to preserve the respectability of the neighbourhood, the purchasers will be properly restricted as to the value of the houses to be erected, and the lines of building frontages to be observed.—Particulars, with plans, may be had fourteen days before the sale at the Greyhound Inn, Croydon; the Leslie Arms, Croydon Common; at Garraway's Coffee-house, Change-alley, Cornhill; of Messrs. DRUMMONDS, ROBINSON, & TILL, Solicitors, Croydon; and of Messrs. BLAKE, Croydon.

IRELANDS' ESTATE, Barking-road, Plaistow.—Valuable Building Land, equal to Freehold.

JOHN T. FISHER is instructed to SELL by AUCTION, at the ABBEY ARMS INN, Plaistow, adjoining the property, on TUESDAY, AUGUST 16th, 1864 at THREE o'clock in 32 Lots, about 1,500 Feet of Eligible FRONTAGES, with good depths, and abutting on streets made and severed in accordance with the requirements of the Local Board of Health. Several commanding corner plots are included in this sale. The immediate and continuall growing demand for houses in this locality, consequent on the establishment of the several important factories, renders this property a safe investment, and one possessing a certain and largely increasing value May be viewed, and Plans and particulars had of Messrs KINGSFORD & DORMAN, Solicitors, 29, Essex-street, Strand, W.C.; at the place of Sale, and of the Auctioneer, Plaistow, E.

AT GARRAWAY'S COFFEE-HOUSE CORNHILL, WEDNESDAY, AUGUST 17, at THREE,

TIMBER—300 loads, Foreign and Colonial.

DEALS and BATTENS—100,000 pieces, ditto, ditto, and other wood goods. H. FREEMAN & Co. Brokers, 3, Crooked-lane, Cannon-street, E.C.

MONEY.—IMMEDIATE CASH ADVANCES on FREEHOLD and LEASEHOLD PROPERTY REVERSIONS and ANNUITIES, WINE, SPIRITS, and TIMBER WARRANTS, FURNITURE, SHARES, &c. Mr. RICHARD CROSSLEY, 17, Moorgate-street, Bank, E.C.

£1,000 IN CASE OF DEATH or an Allowance of 6l. per week while laid up by Injury caused by ACCIDENT OF ANY KIND, Whether Walking, Riding, Driving, Hunting, Shooting, Fishing, or at Home, may be secured by an Annual Payment of 3l. to the RAILWAY PASSENGERS' ASSURANCE COMPANY. MORE THAN 3,000 CLAIMS FOR COMPENSATION HAVE BEEN PROMPTLY AND LIBERALLY PAID. For particulars apply at the Offices, 10, REGENT-STREET, and 64, CORNHILL. WILLIAM J. VIAN, Secretary.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 1859), 14, RUSSELL STREET, COVENT GARDEN, W.C. Advances from 100l. to 1,000l. upon Freehold and Leasehold Property, for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deductions from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope EDWARD HARPER, Secretary.

ROYAL POLYTECHNIC.—Patron H.R.H. the PRINCE of WALES.—The Christian Allegory of "The Knight Watching his Armour." The Ghost of the Diving Bell, Heinke's patent diving dress—The Lilliputian Ghost, a few inches high, in Professor PEPPER'S New Ghost Lecture Entertainment (JOHN HENRY PEPPER and HENRY DIRCKS, joint inventors). STOKES in Memory. Mr. G. W. JESTER'S Ventriloquial Entertainment. Mr. GEORGE BUCKLAND'S new Musical Entertainment daily at 4 and 9. Open 12 to 5, 7 to 10. Admission (Saturday morning inclusive) 1s. N.B.—The Laboratory is always open for Pupils and Analyses.

TERRA COTTA and Fine STONEWARE POTTERY, warranted to stand Frost.

JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economised the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.

A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."

Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Crosses, Terminals, Vases, Statues, Brackets, Consoles, Garden Edging, Guttering, Tile, and twelve inch Paving Tiles, &c. &c.

Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.

London Office, 377, Oxford-street, W.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION, 1862.

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economica substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern-book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, terrace, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City-road Basin, E.C. Kindly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietors; and lastly, that the "Reports of the Juries," page 281, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION, 1862. MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each slab.

Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. A New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 20 and 40, Upper Belgrave-place, Pimlico, S.W.

KAMPTULICON FLOOR CLOTH, DURABLE, COMFORTABLE, ECONOMICAL, and ORNAMENTAL, for CHURCHES, PUBLIC BUILDINGS, BILLIARD-ROOMS, and PRIVATE HOUSES. GOUGH & BOYCE, 76, CANNON-STREET WEST, E.C.

TO BUILDERS, &c. A LARGE ASSORTED STOCK always on HAND, of CLOTHS and BAIZES, In all widths, colours, and qualities, at HILL & SONS, 83 and 89, St. Martin's-lane, Charing Cross.

London:—Printed by CHARLES WYMAN, Printer, at the Printing office of Cox & Wyman, Nos. 74 and 75, Great Queen-street, Lincoln's inn-fields, in the Parish of St. Giles in-the-fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," No. 1, York-street, in the Parish of St. Paul, Covent garden, both in the County of Middlesex.—Saturday, August 13, 1864.

BY Order of the Secretary of State for India in Council

Notice is hereby given, that Ten Junior Appointments in the Engineer Establishment of the Department of Public Works in India will, in the year 1865, be open to Public Competition.

A Competitive Examination will, accordingly, be held in this Office in the month of June next. Full printed particulars of the conditions on which Candidates will be admitted to the Examination may be obtained at the Office, on application, either personally or by letter addressed to the "Under Secretary of State for India, India Office, London, S.W."

India Office, 14th July, 1864.

BUILDERS' BENEVOLENT INSTITUTION.—An ELECTION of PENSIONERS will take place in NOVEMBER next.—Candidates may obtain Forms of application (to be returned on or before 29th AUGUST), at the Offices, 2a, Southampton-street, Bloomsbury. Pensions, 21l. per annum for males; and 20l. for females.

A. G. HARRIS, Secretary.

July 29th, 1864.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Cooking Utensils, &c. to meet the great public demand; and also for the consequent more extensive execution of all descriptions of hot water, bath, laundry, and steam work.

72—74, Bishopsgate-street Within.

COMPETITIONS.

TO ARCHITECTS.—COMPETITION DESIGNS for ST. JAMES'S CHURCH, Waterloo-street, Little Bolton.—The Charitable Trustees, under the will of the late John Barrow, esq., are desirous of obtaining DESIGNS, &c. for a CHURCH, to be erected on land belonging to them in Waterloo-street, Little Bolton. The land for the site forms a parallelogram of 92½ yards long, by 41 yard's wide, and contains (including one-half of West-floor-street, of 14 yards wide, and the half of three other streets of 12 yards wide, each running along the other three sides of the land) 8,739 superficial square yards. The frontage to Waterloo street, which runs nearly east and west, is 221 yards. It is desired that the church shall afford comfortable sitting accommodation for 1,500 persons, and that the outlay shall not exceed 5,000l. The plans to be drawn in line only, to a scale of 10 feet to 1 inch. Each set of designs to comprise plan, interior, exterior, and sectional elevations, and a perspective view with the estimated cost of construction and completion of the design, exclusive of the land, but exclusive of all interior fittings and work. The designs to be forwarded to the Rev. HENRY POWELL, Vicar of Bolton (under motto or cypher only, accompanied by a sealed letter, containing the real name and address of the person or firm), on or before the 30th SEPTEMBER, 1864. A premium of 50l. will be given to he person whose design the Trustees shall deem the best, and such design shall be the property of the Trustees, who shall not be bound to employ the successful person as architect, though they will be disposed to treat with him for the purpose. The successful designer will be required to the addresses of the respective owners, by the usual modes of conveyance; but the Trustees will not be re-pon-sible for their safe delivery, nor for any payment to the owners in respect of such plans, or of the adoption of any part of any of them in the erection of the Church. Further particulars may be obtained from the Rev. HENRY POWELL, Vicar of Bolton; JOHN HICK, Esq., or THOMAS LEVER BUSHTON, Esq. three of the Charitable Trustees under the will of the late John Barrow, esq. deceased.

TO ARCHITECTS.—The SIR TATTON SYKES MEMORIAL.—The Committee for the Erection of a Memorial to the late Sir Tatton Sykes, Bart. are prepared to receive DESIGNS and ESTIMATES for the ERECTION of an OBELISK or COLUMN, on an elevated site on the Sledmere Estate, on the Yorkshire Wolds, near Driffield. Designs and Estimates to be sent to the Honorary Secretaries, on or before the 1st day of OCTOBER next. Twenty pounds will be given for the design considered the most suitable by the Committee, and ten pounds for the second-best design.—Particulars to be had on application to

WM. TOPHAM, } Hon. Secs.
F. C. MATTHEWS, }

Driffield, 1st August, 1864.

BOROUGH of BOLTON. — COMPETITION PLANS for NEW TOWN HALL.—To ARCHITECTS, &c. &c. The Bolton Corporation purpose ERECTING in the Borough a TOWN HALL, covering an area of about 4,300 square yards, and are desirous of obtaining Plans, Sections, and Working Drawings for same. Premiums will be given as follows, viz.—120l. for the best, 80l. for the second best, and 40l. for the third best design in the opinion of the Council; but the Corporation will not be responsible for any payment for unsuccessful designs. The plans of the three successful competitors to be the property of the Corporation.—Applications to be made to Mr. BAYLIS, the Borough Surveyor, who will show the ground, and give any further information on the subject. The designs must be sent in, under seal, without signatures, with a private mark or motto, and a letter accompanying them, also under seal, containing the corresponding mark or motto, and the designer's name and address. They must be addressed to the Town Clerk, and delivered in on or before the 1st DECEMBER, 1864.

ROBT. G. HINNELL, Town Clerk.

Bolton, 11th August, 1864.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.

TENDERS are required for CARRYING OUT the ARTIFICERS' and other WORKS of an estimated value of three hundred pounds and under, at NETLEY, in the County of Hants, under a TRIENNIAL CONTRACT, from the 1st of OCTOBER next, determinable at any period after one year on either party giving to the other three months' notice in writing.

Copies of the Schedules (price seven shillings and sixpence) and form of Tender may be obtained on application at this Office.

The Secretary of State for War does not bind himself to accept the lowest or any Tender. (Signed) P. RAVENHILL,

Major, Commanding Royal Engineer, Netley.

Royal Engineer Office Netley,
3rd August, 1864.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS, IRONFOUNDERS, &c.

TENDERS are required for SAVING DOWN about 5,000 feet of Cast-iron PIPE MAIN, at the Gun Wharf, Portsmouth, County of Hants.

Persons desirous of Tendering for the execution of this Work must leave their names at this Office, on or before the 23rd AUGUST, 1864, and pay the sum of 10s. 6d. for the bills of quantities.

The Secretary of State does not bind himself to accept the lowest or any Tender. J. W. GORDON, Col. C.B.E.

Royal Engineer Office, Portsmouth, 9th August, 1864.

TO BUILDERS.—TENDERS are required for ALTERATIONS and ADDITIONS to BELVEDERE CHURCH, Erith, Kent.—Drawings and specifications may be seen, and all particulars obtained, at the Office of the Architects, Messrs. W. G. HABERSHON & PITE, 38, Bloomsbury-square.

TO BUILDERS.—TENDERS are required for the COMPLETION of Two VILLA RESIDENCES, Belvedere Park, Erith, Kent.—Drawings and specification may be seen, and all particulars obtained, at the Offices of the Architects, Messrs W. G. HABERSHON & PITE, 38, Bloomsbury-square.

TO ENGINEERS.—Notice is hereby given, that the Hastings Local Board of Health are ready to receive TENDERS from persons desirous of CONTRACTING with them for a new STEAM ENGINE, PUMPS, and WELL for the Hastings Waterworks. The specification may be had on application at the Town Clerk's Office, High-street, Hastings, where Tenders, duly signed, must be delivered before TEN o'clock of the morning of FRIDAY, the 26th day of AUGUST instant. The Local Board do not bind themselves to accept the lowest or any Tender.

ROBERT GROWSE, Town Clerk.

Hastings, 10th August, 1864.

BUILDING of ST. FINBAR'S CATHEDRAL, CORK.—Builders desirous of TENDERING for the above BUILDING are requested to send in their names to the Architect or the Committee before the last day of AUGUST. The quantities will be supplied by that time, or as soon after as possible. A fortnight will then be allowed to make the estimates, during which time the drawings, specifications, and conditions of Contract can be seen at the Cathedral Committee-rooms, Cork; and at the Office of the Architect, Mr. W. BURGES, 15, Buckingham street, Strand, London. The Committee do not pledge themselves to accept the lowest or any Tender.

LLANELLY NEW MARKET.—To CONTRACTORS, BUILDERS, and IRONFOUNDERS.—The Local Board of Health for the district of Llanelly are prepared to receive TENDERS for the following WORKS:—

CONTRACT No. 1.—For a stone-built boundary-wall, about 2,000 feet long.

CONTRACT No. 2.—For Cast-iron Pillars, about 200 in number.

CONTRACT No. 3.—For Materials and Labour, for roofing of sheds.

Plans, specifications, and forms of Tender may be seen at the Office of Mr. E. BAGOT, C.E. Surveyor to the Board, on and after the 10th instant. Tenders for the Works, endorsed "Llanelly Market Contract, No. 1, 2, or 3," are to be delivered in to Mr. F. L. BROWN, Clerk to the said Board, not later than FRIDAY, the 26th instant. The Board do not pledge themselves to accept the lowest or any Tender.—By order, F. L. BROWN, Clerk.

Town Hall, Llanelly, August 2, 1864.

CONTRACTS.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a VILLA RESIDENCE at Chertsey, are informed that the plans and specification may be seen at my Office from the 24th to the 30th instant, and at the Crown Brewery Office, Chertsey, from the 31st instant to the 6th proximo. Sealed Tenders to be sent in not later than the 8th of SEPTEMBER, to H. WETTON, Esq. Chertsey, Surrey. The lowest Tender not necessarily accepted. T. WONNACOTT, Architect.

Farnham, Surrey, August 20, 1864.

TO SEWER CONTRACTORS.—The Board of Works for the Fulham District, in the County of Middlesex, hereby give notice that they will be ready at the Board Meeting, to be held at Broadway House, Hammersmith, on WEDNESDAY, the 7th day of SEPTEMBER, 1864, at TEN o'clock precisely, to receive sealed TENDERS from parties who may be willing to contract for the LAYING DOWN, CONSTRUCTING, and completely FINISHING certain intended BRICK SEWERS, viz:—A sewer across Brook-green, about 2,230 feet in length; another sewer, in King-street East, about 2,240 feet in length, both in the Parish of Hammersmith; and another sewer in Parson's Green lane, Fulham, about 1,000 feet in length, continued with about 1,000 feet of pipe sewer.—Plans, specifications, and detail drawings of the works can be seen and examined, and the form of Tender may, with other particulars, be obtained at Broadway House, Hammersmith, between the hours of TEN a.m. and FOUR p.m. on any day after MONDAY, the 22nd of AUGUST, 1864, previous to the 6th day of SEPTEMBER next. The Tenders must be for each sewer separately, and sent in sealed, addressed to the Chairman of the Board, on or before TEN o'clock of the said 7th day of SEPTEMBER, marked on the outside, "Tender for Sewers," and the party whose Tender may be accepted will be required to enter into a contract and bond, with two sufficient sureties for the due performance of the undertaking; such contract and bond to be prepared by the Solicitor to the Board, at the expense of the contractor. The Board does not pledge itself to accept the lowest or any Tender.—By order, W. LOVELY, Clerk.

NOTICE to BUILDERS.—TENDERS are required for ERECTING an INFANT SCHOOL and Quarters for a Schoolmistress, at Sheerness. Parties desiring to Tender for these Works, must leave their name at the Office, on or before the 3rd SEPTEMBER next, and pay the sum of 10s. for the bills of quantities, which will be forwarded to each party as soon as prepared by the War Department Surveyor.

The Secretary of State for War does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Sheerness,
17th August, 1864.

TO BUILDERS.—FLADBURY, near Pershore.—Proposed new SCHOOLS and Master's HOUSE at Fladbury.—Plans and specification may be seen at the Office, on and after AUGUST 24th, until SEPTEMBER 10th, on application to the Rev. J. HAVILAND at the Rectory. Sealed Tenders endorsed "Tender for Fladbury School," with name and address free of expense, to be sent to the Rectory on or before SEPTEMBER 14th inst. The Committee do not bind themselves to accept the lowest or any Tender.

FREDERICK PREEDY, Architect,
13, York-place, Baker-street, London.

TO BUILDERS.—GLOUCESTER BELL HOTEL COMPANY (limited).—The time for delivery of TENDERS for REBUILDING this Hotel has been extended to the 3rd SEPTEMBER next. Full particulars may be obtained on application to Mr. Hy. JAMES, Architect, Eastgate-street, Gloucester.

THOMAS TAYNTON, Sec. pro tem.

CROYDON LOCAL BOARD of HEALTH.—TO CONTRACTORS and OTHERS.—Persons desirous of CONTRACTING with the Croydon Local Board of Health for LAYING, MAKING, and METALLING the ROADS, CONSTRUCTING the EARTHENWARE and IRON PIPE SEWERS, and other Works upon the Lebanon Park Estate, Upper Norwood, Bell Green, Thornton Heath, and the adjoining district, in the parish of Croydon, in accordance with the plans and specification prepared by Mr. Baldwin Latham, C.E. the Engineer for the said Board, may see the plans and specification, and obtain other information at the said Engineer's Office, in the Town Hall, Croydon, on or after this date. Sealed tenders, endorsed, "Tender for Roads and Sewers, Thornton Heath," are to be delivered at the Office of the Local Board, in the Town Hall, Croydon, on or before FOUR o'clock on the afternoon of TUESDAY, the 30th day of AUGUST instant. The Local Board do not bind themselves to accept the lowest or any Tender.

3rd August, 1864. HENRY RICHARDS, Clerk to the Board.

THE Board of Guardians of St. Matthew, Bethnal-green, are willing to receive TENDERS for the ERECTION of a BOARD ROOM and OFFICES at their Parochial Workhouse, Bethnal green, from the recipients of their respective E. N. CLUTTON, 7, East-india-avenue, Leadenhall-street, E.C.; Copies of the quantities may be obtained of Messrs. WILLIAMS & SCHOFIELD, 12, Montague-street, Russell-square, W.C. The Board do not bind themselves to accept the lowest Tender, and will require the builder whose Tender is accepted to give the names of two sureties to be bound jointly with himself in the sum of 500l. for the due execution of the works. Tenders to be delivered at the Office, W.T. HOWARD, Esq. Clerk to the Board, Waterloo-road, Bethnal-green, before SIX o'clock, p.m. on MONDAY, the 12th of SEPTEMBER next; and personal attendance will be given by the Builder at the TUESDAY, SEPTEMBER 13, the following day, at FOUR o'clock precisely.

TO BUILDERS.—Persons willing to CONTRACT for the ERECTION of New SCHOOLS and HEADMASTER'S RESIDENCE, at Bedford, near Bedford, from the plans and specification of the Architect, Mr. JAMES HORSFORD, Well-street, Bedford. Tenders to be sent in to the above address on or before WEDNESDAY, the 31st instant. The Trustees do not bind themselves to accept the lowest or any Tender.

Bedford, August 17, 1864.

[For remainder of Contracts see next Page.

TO CONTRACTORS.—The Trustees of the Town, Port, and Harbour of Whitehaven are prepared to receive TENDERS for NEW BRAGS, and OTHER WORKS for the drainage of the said Town and Port, according to Plans, Sections, and Specifications, prepared by Mr. HAWKSLEY, Civil Engineer, 30, Great George-street, Westminster, may be seen at his office, and at the Office of the Secretary to the Trustees, at the Town Hall, in Whitehaven (where bills of quantities and other particulars may be obtained on and after MONDAY, the 1st day of AUGUST next). Sealed Tenders, addressed to the Secretary to the Trustees, must be delivered at his office, in Whitehaven, on or before MONDAY, the 22nd day of AUGUST next, at which time the Trustees do not pledge themselves to accept the lowest or any other Tender, although they will do so unless there should appear to them to be sufficient reason for the contrary.

By order, JOHN COLLINS, Secretary to the said Trustees.

Queen's street, Whitehaven, 22nd July, 1864.

GREAT WESTERN RAILWAY. — To BUILDERS.—The Directors are prepared to receive TENDERS for the ERECTION of an ENGINE SHED at Pontypool Road. Also for the EXTENSION of their Carriage and Wagon REPAIRING SHOPS at Worcester. Plans and specifications may be seen on and after the 27th instant, at the Engineer's Office, Paddington, and Worcester, where also printed forms of Tender and specification may be obtained. Sealed Tenders, addressed to the Secretary, marked "Tender for Works, Pontypool Road," or "Worcester," must be delivered at the Secretary's Office, Paddington Station, not later than TEN o'clock on WEDNESDAY, the 24th instant. The Directors do not bind themselves to accept the lowest or any Tender.

F. G. SAUNDERS, Secretary.

Paddington Station, 10th August, 1864.

BUILDERS and OTHERS desirous of ERECTING PAIRS of DETACHED and SEMI-DETACHED VILLAS at Chiswick, may inspect the plans and particulars at the Offices of the Architects and Surveyors, Messrs. MANSELL & ELPHICK, 33a, Belgrave-square. If no proposal in the first instance, that Builders erect the Villas on their own account, as the roads are secure. The ground-rent moderate. Term, 99 years.

TO BUILDERS and CONTRACTORS.—The Committee for the Restoration and Enlargement of the Parish Church of Llangollen are desirous of obtaining TENDERS for the WORKS proposed to be done. The drawings and specification will be open to inspection between the hours of TEN and SIX, at Walton House, Llangollen. Tenders for the works to be sent on or before the last day of OCTOBER next, addressed to the Rev. HENRY PEIRCE EDWARDS, Llangollen. The Committee do not bind themselves to accept the lowest or any Tender.

S. POUNTNEY SMITH, Architect.

BIRKENHEAD INDUSTRIAL SCHOOLS (ALBERT MEMORIAL). — To BUILDERS.—Persons desirous of TENDERING for the above SCHOOLS, may inspect the plans and specifications, and obtain copies of the quantities, at the Offices of Mr. DAVID WALKER, Architect, 22, Lord-street, Liverpool, on and after TUESDAY, the 23rd inst. Tenders sealed as I endorsed, to be delivered to the undersigned, at the Temple, Dale-street, Liverpool, on or before the forenoon at TWELVE p.m.—Security will be required for the due performance of the contract, and the committee do not bind themselves to accept the lowest or any Tender.

August 18, 1864. WILLIAM JACKSON, Jun. Hon. Sec.

TO BUILDERS and CONTRACTORS.—Parties desirous of submitting TENDERS for a GENTLEMAN'S RESIDENCE, with STABLING, &c., within two miles of Bracknell Station (South-west Railway), are requested to communicate with me. The Works are to be commenced immediately, and finished within nine months.

W. H. WOODMAN, Architect.

Grey Friars, Reading, August, 1864.

TO BUILDERS and CONTRACTORS.—The Directors of the Greenwich Tannery Company (Limited) are prepared to receive TENDERS for the ERECTION of their WORKS, plans and specification of which may be seen at the Company's Office, 25, Bishopsgate-street within, E.C. between the hours of ELEVEN a.m. and FOUR p.m. Sealed Tenders, endorsed "Tender," must be delivered at the Company's Office, as aforesaid, before the 31st AUGUST instant, by ELEVEN a.m. The Directors do not bind themselves to accept the lowest or any Tender.—By order,

FREDERICK W. CHAPLIN, Secretary.

BLACKFRIARS BRIDGE. — TENDERS will be received for the OLD STONE of this Bridge, consisting of Portland, rubble backing and steps, Bath, Portland, and rough rubble. Also for the handsome columns, with moulded bases and curved caps.—Apply to Messrs. THORN & CO. Contractors, on the Bridge.

GREEN'S PREPARED ASPHALTE, for check damp cellars, &c. price 6*s.* per ton, from 30 Midland or London and North Western Railway, Bedford.—Address DANIEL GREEN, Bedford. List of Prizes for Green's Asphalte Floors forwarded by post.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have received. Their durability and strength, permanent contractibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 2*in* to 30*in* feet long, render them superior to leather for almost all working purposes, and especially where corrosion occurs. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Hosses, Union joints, Flasks, Bottles, Bowls, Toilet trays, Curtain-rings, Galvanic Batteries, Telegraph Wires, &c. manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions, China, Glass, and Wood Furniture, of all kinds, with Patent Sliding Spindles; Dr. Arnott's Ventilators, &c.; and the New Registered Venetian Ventilator, so much admired, 6*s.* 6*d.* each.
J. H. BOOBBYER (late STURCH & BOOBBYER), established nearly 200 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.
14, Stanhope-street, Newcastle-street, Strand, London, W.C.

ROBERT MACLAREN & CO.
EGLINTON FOUNDRY, GLASGOW.
Manufacturers of all sizes of CAST-IRON MAIN PIPES, for Gas or Water, by an IMPROVED PATENT.
GENERAL IRON FOUNDERS, GAS ENGINEERS, and WROUGHT IRON TUBE MAKERS.

DAY and GAS LIGHT REFLECTOR MANUFACTURER.—THOMAS FOX, 99, Hatton Garden, E.C. and 285, Charles-street, Hatton Garden, E.C. A large assortment of Silvered Glass Globes, Lamp Spires, &c. always on hand. All kinds of Bent Glass Silvered.
N.B.—The usual discount to BUILDERS and the TRADE.

TO CONTRACTORS.—On SALE, TWO WROUGHT-IRON GIRDERS, 50 feet long by 4 feet deep, made of Monkbridge iron.—Apply to S. HOOD & SON, 30, King William-street, E.C.

PERFECT VENTILATION CANNOT be OBTAINED WITHOUT a CONSTANT SUPPLY of PURE AIR to DRIVE OFF the VITIATED AIR. This is now done by the Patent tee. J. ROBERTS, at little expense in building houses, obviating the absolute necessity of opening windows or doors for the purpose, and preventing dangerous draughts.—Apply to S. ATKINS, 7, Chrystal-road, North Brixton.

HOT-WATER APPARATUS.—The Churchwardens of the Parish of St. Sepulchre, London, invite TENDERS for WARMING the PARISH CHURCH by HOT-WATER PIPES. A plan of the interior of the building may be had upon application at the vestry clerk. No unseen tenders must be sent on or before WEDNESDAY, the 24th AUGUST, instant.
STEPHEN JONES, Vestry Clerk,
1, Church Porch, Skinner-street, snow-hill.
13th August, 1864.

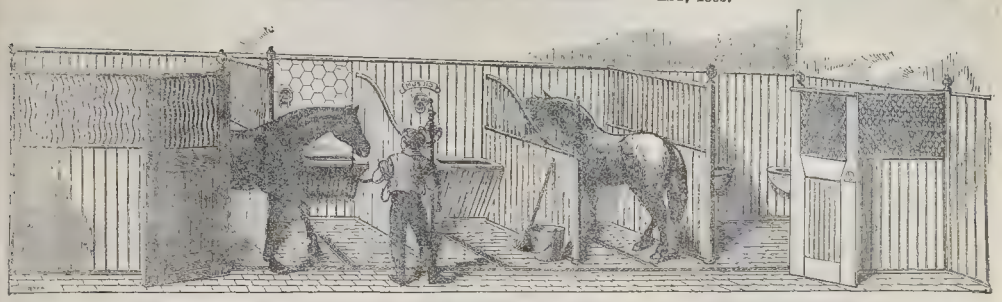
Middlesex.
Estimates given for Building, Railway, and Machinery Castings of any size, and immediate delivery. London Agents, H. J. WALDUCK & CO. 11, Old Jewry-chambers, London, E.C.

ST. PANCRAS IRON WORK COMPANY,



OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

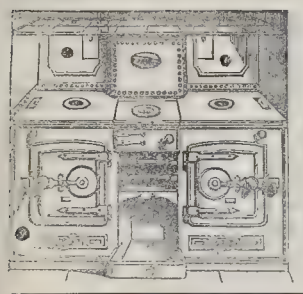
The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS



Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION.——INSPECTION OF SHOW-ROOM REQUESTED.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.
